You get the benefit of our unique methods. By developing the known price idea in clothing we have been able to concentrate and vastly increase our volume. By so doing we lower our costs, giving exceptional all-wool fabrics, style and tailoring at moderate price. There is the added advantage of knowing the price before you go into the store—and guaranteed satisfaction.

This unique Styleplus system has given these clothes astonishing popularity—made a great hit with good dressers and careful buyers. In spite of the fact that vast quantities of wool are required for making uniforms, our unique methods enable us to continue to supply the men of America with guaranteed stylish all-wool clothes at known moderate prices.

Styleplus Clothes \$17 (black label) always excel at that price.  
Styleplus Clothes \$21 (green label) always excel at that price.

Each grade the greatest possible value at the price. See for yourself at the Styleplus store.

OUR ADVERTISERS RELIABLE

We guarantee our subscribers against  
loss through dishonesty of any adver-  
tiser in the Cultivator. We do not at-  
tempt, however, to adjust trifling differ-  
ences between subscribers and honest,  
responsible advertisers, nor will we pay  
the debts of honest bankrupts. Notice  
of complaint must be sent us within 30  
days from date of the transaction, and  
the subscriber must have mentioned the  
Cultivator when writing the advertiser.

THIS WEEKS COVER

They have not handed us our  
sugar cards yet, but for fear they may  
it might be well for readers of the Cul-  
tivator to establish a little one colony  
apiary in their own back yards. Pre-  
sumably the choicest honey will not  
be produced, but it will be honey, and  
the experience will be worth some-  
thing.

California is now the country's  
greatest honey producer, and there  
are apiaries which cover literally  
acres and send honey "back to the  
States" in carloads. A little apiary  
like the one on the cover may be  
found, not only in Tulare County  
where this one was planted, but in  
many sections of the state.

Let's produce more honey.

LIBERTY LOAN

It was a great victory—the Lib-  
erty Loan. Greatly oversubscribed,  
practically every section exceeded its  
quota, and the farmers may well be  
proud, for little Ventura, strictly an  
agricultural county, was the first to  
meet its quota in California. Ana-  
helm, a settlement among the vine-  
yards and walnut orchards of Orange  
County, many of the residents Ger-  
mans, loyal to the core, claims the  
greatest per capita subscription of any  
section of the United States. Other  
agricultural communities proved fully  
as loyal.

Now we are ready for the next.  
Meantime, let's produce more.

SHY IN FLORIDA

The East will be compelled to  
Hooverize on oranges in the next 12  
months. Not only are California na-  
vels going to be an exceedingly short  
crop but Floridas of all kinds will be

short. This is, as expressed in "The  
Packer" because of "disastrous freeze  
last winter which has cut the orange  
and grapefruit crop short this sea-  
son." The estimate for Florida's out-  
put of citrus fruit for the coming year  
is only 4,000,000 boxes. This will be a  
smaller crop than for many years. In  
1914 the citrus output was 7,651,514  
boxes; in 1914-15, 9,700,800; 1915-16,  
8,202,775; 1916-17, 6,960,000. In 1917-18,  
as noted above, the estimate is for  
4,000,000 boxes. How much the cold  
of last winter had to do with this de-  
crease, and how much citrus canker  
and other troubles, we do not know,  
but certain it is the citrus grower suc-  
ceeds only by eternal vigilance. If  
the present thrift of the California cit-  
rus tree gives opportunity for estimat-  
ing the following year's crop, Califor-  
nia will have an immense output in  
1918-19. Florida's 4,000,000 boxes is  
divided as follows: Oranges, 2,800,-  
000 boxes; grapefruit, 1,000,000; tan-  
gerines, 200,000.

JOHN HOWARD HALE

Attendants at the November,  
1914, convention of the State Fruit  
Growers at Los Angeles may recall  
the genial and witty peach grower,  
John Howard Hale, who came and told  
us methods of peach growing in the  
East and criticized in a most good na-  
tured way California methods of pro-  
ducing them. Everyone who heard  
him enjoyed to the full his witty talks.

Mr. Hale is dead. He was born in  
1853 and at 14 went to work as a  
farm hand at \$14 per month. At 21

he took his father's farm, covered  
with mortgages, and converted it into  
a peach orchard. He made good.  
Later in life he organized the great  
concern which financed the Hale  
Georgia Orchard Company which  
planted the largest peach orchard in  
the world, 350,000 trees. Mr. Hale was  
for several years president of the  
American Pomological Society, head  
of the Connecticut state grange, trustee  
of the Connecticut state agricul-  
tural college, and occupied many other  
positions of trust.

SELECTIVE DRAFT

We believe the farmer is doing  
his full share, and even better, in sup-  
port of the war. Incidents have been  
cited where farmers have refused to  
sell wheat at prices established by the  
government. On the other hand, an  
incident may be recalled in the con-  
gress of the United States where large  
interests appeared and defeated, to a  
degree at least, the excess war profits  
measure. Also large manufacturers  
have been found who have been charg-  
ing abnormal prices for some of the  
munitions of war. The wheat seller  
and large manufacturer perhaps had  
no idea of doing anything to embar-  
rass the government in its moment of  
trial. There is generally an honest  
desire to secure so far as possible just

distribution of the burdens and costs  
of the war, but the farmer thinks he  
has cause to believe that he at times  
bears more than his just proportion.

For instance, as to the draft, an edi-  
torial in Wallace's Farmer, published  
in Iowa, refers to investigations made  
in a strictly agricultural county of  
that state. The investigator found:  
"that the population of the county is  
49.2 per cent in the towns and 50.8 per  
cent in the country. The enrollment  
for the draft was 39.2 per cent from  
the towns and 60.8 per cent from the  
country. Of the number of men called  
for examination, 31.7 per cent were  
from the towns and 68.3 per cent from  
the country. The number of single  
men enrolled in the entire county was  
940, and the number of married men  
804. The number of single men who  
were drafted was 192 and of married  
men 114. Of 100 single farmers who  
were farming for themselves, 26 were  
rejected for physical reasons and 74  
accepted. Of 83 single farm hands, 21  
were rejected and 62 accepted. Of  
149 married farmers who were farm-  
ing for themselves, 37 were rejected  
and 112 accepted; but 41 of these  
were granted exemptions, making 71  
married farmers who were farming  
for themselves, who have been or will  
be called to the camps. Of 19 married  
hired hands, five were rejected and 14  
accepted, but 10 of these 14 were  
granted exemption, making four mar-  
ried farm hands who were called. It  
will be noticed that the percentage of  
exemption granted hired hands is  
much greater than among married  
farmers who were farming for them-  
selves, probably because of depend-  
ents."

We know of no such investigation  
made on the Pacific Coast, but from  
general knowledge and the plan of  
exemptions we believe that should  
such investigation be made it would  
be fully as favorable to the farmer.

The exemption boards have had a  
great task which they have perform-  
ed nobly and without compensation,  
and we doubt not in 99 cases out of  
100 have done their best to render just  
decisions. It has been a problem in  
the solving of which they have had no  
precedents to guide them. At the  
time of the passage of the selective  
draft law it was announced often that  
it was to be truly selective. The er-  
rors which England had made in tak-  
ing some of her best mechanics and  
food producers and placing them in  
the trenches were to be avoided, but  
so far as we have heard in California  
the agricultural calling, as such, has  
received no exemptions.

More than ever we are becoming  
aware of the food shortage; more than  
ever the food commission is appealing  
for greater production and conserva-  
tion; more than ever the shortage of  
labor is being impressed upon the  
farmer and he is turning every way  
he can to secure labor saving appli-  
ances which enable maximum produc-  
tion at minimum labor expenditure.

If the farmer can serve his coun-  
try best by going to the trenches, he  
is a slacker if he remains at home and  
raises hogs and grows corn; if he can  
serve his country best by raising hogs  
and hominy, he is a slacker if he goes  
to the trenches. Everyone should be  
required to have a part in the defense  
of our liberties. Therein is where the  
selective draft should operate, and  
thousands of young men who are en-  
gaged in non-productive industries  
may well be chosen to fight, while  
producers of food may also be chosen  
to remain on the farm. If such a plan  
is not followed then the "selective"  
draft is not selective, but simply the  
old-time draft of all of military age.

CHISEL TEETH FOR THE CULTIVATOR

That liberty bond U bought may get a U-boat.

Local Paper in Most Any District: "Many sugar beet farmers are consid-  
ering putting in beans this year instead of beets." Will the beans beat the beets?  
beets or will the beets beat the beans?

The Cultivator received today a letter written in French from a Turkish  
gentleman residing in Italy asking addresses of dealers in farm implements, trac-  
tors, seeds and nursery stock. We have subscribers in Africa, Australia, India,  
South America, Europe and the Islands of the Sea, not to mention some 31,000  
right here in California.

To waste your strength just a talking is as bad as a horse a balking.

When the radiant dawn of Christmas broke  
And The World to a giftless sock awoke,  
He stretched and said: "O My, O Me!  
I must give the kids a jolly spree  
And the boys at the front some chewing gum  
And nice warm socks and a letter from him,  
And I reckon I'll find along the way  
That I've given myself A Regular Day!"

Agricultural News Not

The Texas pecan crop is now on  
ing on the market. It is the heavy  
for several years.

The United States shipping bo  
has requisitioned all steam vessels  
2500 tons capacity.

One hundred seven counties  
Texas have been released from qu  
antine for sheep scabies.

Thousands of cattle and hogs w  
burned to death in last week's fire  
the Kansas City stockyards.

Chicago potato dealers have al  
ished the bushel; hereafter they  
buy and sell by the 100 lbs.

The American Red Cross has  
shipped 5000 bags of flour for feed  
Serbians in Austrian camps.

Peanut buyers in Texas are rep  
ed offering \$1.50 per bushel; 40 ce  
higher than opening prices last  
year.

The Eastern apple crop is below  
erage in most sections, while  
Northwest, including Colorado, show  
an increase of 19 per cent over  
year's output.

Food Pledge Week was postpo  
from the week beginning October  
to the week beginning October 23  
as not to conflict with the libe  
loan campaign.

Italy has requisitioned all crops  
rice and maize, except such amou  
as are needed for feeding the fa  
er's family and stock and for sow  
next year's crops.

Food Commissioner Hoover  
nounces that the turning point in  
high retail prices of foodstuffs  
has been reached. Especially does he  
pect lower prices on meats, flou  
beans, potatoes, sugar and oth  
staples.

Poultry, butter and egg men held  
big conference in Chicago last we  
One thing they did was to appropri  
\$50,000 a year for the coming  
years to a publicity campaign for  
educating the American public to  
value of cold storage products.

A company operating canning  
tories in Evansville, Indiana  
Owensboro, Kentucky, has decided  
can rabbits as a war measure. The  
surrounding country will provide  
abundance of rabbits, it is believ  
Business men in the Green River  
rity in Western Kentucky ha  
agreed to provide from 50,000 to 6  
000 rabbits yearly.

Honey is finding a new war ti  
use; it is employed as a substitute  
glycerine in pharmaceutical prepa-  
tions. A new dressing which is plac  
with remarkable results over scab  
burns, and general wounds is almo  
two-thirds honey. Glycerin has  
come almost prohibitive in price  
cause of having been commandeered  
by European governments for man-  
ufacture of explosives.

# Agricultural News Notes of the Pacific Coast

## Northern California

Sutter County's warehouses are full of beans.

"Kill every squirrel" is Butte County's slogan.

The California State Grange recently met in annual session at Napa.

Solano County reports that the antrax outbreak has been checked.

There will be extensive plantings of almond orchards in Colusa County.

Sacramento has an ambition to be a rice and bean shipping center of the state.

Arrangements are being made in Mendocino County for a farm bureau campaign.

Occasional new outbreaks of antrax are reported in different portions of the state.

Eldorado County has organized a farm bureau. Eight local centers have already been formed.

Sonoma County is still lacking in number of names necessary for organization of a farm bureau.

Representatives of rice interests met at Oroville recently and discussed methods of drainage of rice lands.

The Humboldt County Stockmen's Association recently met in annual session and at banquet in Ferndale.

The newly organized state cattle protection board is being besieged with applications from cattlemen to register brands.

The olive harvest season began late and is now in full swing. It is thought that 50,000 people will be employed in harvesting and curing.

Cloverdale's wool sale resulted in a price of 50 cents per pound to the producers who came from Northern Sonoma and Mendocino County sections.

It is probable that the predicted dollar butter will not materialize. Managers of some of California's larger canneries think the present prices are not worth the trouble.

Rice growers of the Sacramento Valley have disposed of large quantities of rice straw for beds for the winter, one contract for 10,000 tons was recently signed up.

President Swett of the California Grape Protective Association assures grape producers that the campaign will be continued until sufficient measures are secured to put the Rominer bill before the voters at the November, 1918, election.

An Almond orchard in Woodland, Yuba County, which has been interplanted with alfalfa for the past few years this year produced a 100 per cent crop while neighboring orchards produced much below. This production is attributed to the beneficial effect of the alfalfa.

Deputy Horticultural Commissioner Hoyt, who has recently returned from making investigation of citrus canker epidemics in Florida last week met with growers of Butte County at Oroville and told them of the serious situation in Florida and of the steps necessary to control the canker.

Importation of Asiatic labor and the closing of saloons were advocated as means of improving the labor situation in California at a meeting last week in San Francisco of the agricultural production board. This board has been selected by Food Commissioner Ralph P. Merritt. Dean Hunt of the University of California presided.

## Central California

San Joaquin's bean crop is reported in the very best of condition.

Tulare County says: "We must triple our sugar beet production this year."

It is reported that plantings of cotton will be made in the Tulare Lake bed next season.

The entrance of Idaho potatoes into the market has depressed price on San Joaquin stock.

During September Manteca, Stanislaus County, shipped out 400 carloads of grapes, tomatoes, beets and hay.

The new packing plant of the Universal Packing Company at Calwa, Fresno County, has begun operating.

J. A. Benson of Union Island, San Joaquin County, has contracted anthrax from skinning an animal dead from the disease.

Lodi has been shipping 51 carloads of Tokays a day and if it were not for the car shortage would have shipped double the amount.

Dairymen of San Joaquin Valley have organized the San Joaquin Milk Producers' Association with headquarters at Fresno.

W. N. Birch has been appointed adviser for Madera County in place of T. C. Mayhew who recently resigned to care for his own ranch property.

The cooperative creamery at Visalia paid to its members the highest price for butterfat in October in its history. It was between 50 and 51 cents per pound.

The Tulare Cooperative Creamery, in its returns for sweet cream sales, netted to the dairymen as high as 56 cents. The total receipts for the month were \$147,650.45.

The California Peach Growers and the California Associated Raisin Company have lined up with the California Federation of Farmers' Cooperative Marketing Associations.

The mass meeting of milk producers recently held at Dinuba, Tulare County, launched a campaign for a complete organization of dairymen of the state in one large central body.

At the recent auction sale held by the Kern County farm bureau at Wasco several carloads of stock were sold, bringing a total of \$11,800. The highest price was paid by a Los Angeles packer, \$16.65 per hundred.

An expert in grain smut eradication has been working in collaboration with the farm adviser of Fresno County. The Huron farm center of that county is investigating means of treating seed in immense quantities.

The top notcher of the dairy cows tested by the Stanislaus County farm bureau during September was B. L. Hayden's Daisy, who averaged 2.02 pounds butterfat per day. Mr. Hayden also took first place for best average herd.

The California Creamery Operators' Association, which recently held its annual meeting in Petaluma, will meet next year at Visalia. N. J. Beck, manager of the Visalia Cooperative Creamery, was elected president of the association.

The Orange Cove Citrus Association, at its recent annual meeting elected the following directors: J. F. Wright, O. R. Barber, W. C. Howorth, E. A. Flanders, R. J. Fleming, C. R. Whittington, S. M. Peet, George Dundas and E. M. Sheridan.

## Southern California

One car of walnuts recently netted Orange County shippers \$12,900.

Redlands is making exhibits at the apple show this week at Yucaipa.

The Riverside County Fair Association closed up its affairs \$7000 to the good.

Brawley, Imperial County, is to hold an auto show the week of November 12-17.

Victorville, San Bernardino County, is launching an immense irrigation project.

Over 100 carloads of canned tuna have been shipped from Long Beach this season.

Live stock trains out of Imperial Valley for Los Angeles are run on Mondays and Fridays only.

The Fullerton-Placentia Walnut Growers' Association has recently shipped about 350 tons of first quality nuts.

Farm Adviser Bauhmeier of San Bernardino County, has an assistant, Harry E. Drobish having been recently appointed.

At the recent meeting of the Hemet Cured Fruit Association A. E. Goodrich, Ben Wiersen and Wm. Sheppard were elected directors.

The various citrus shipping associations are now making refund of moneys not required for season's packing house expense.

San Diego County is now finding that it possesses a great sugar beet section in the lands along the Tia Juana and Otay Rivers.

Serious damage was visited upon the potato and vegetable truck farms near San Bernardino by frost and severe north wind last week.

The recent windstorm near Yuma, Arizona, caused much damage to cotton. There is an effort to find method of handling "windfall" of cotton.

The Riverside-San Bernardino County Beekeepers' Club held a convention during the Riverside County fair. "Standardization of Honey" was the main subject considered.

The Charter Oak Citrus Association received within the last year 387,807 field boxes of fruit. It shipped out 636 cars of fruit. The total paid to the growers was almost \$380,000.

Work at the Kingsbury evaporating plant at Redlands will be continued throughout the winter. The business of processing by-products from cull apples and oranges has been very largely extended.

P. J. Dreher, who recently resigned as manager of the San Antonio Fruit Exchange, has been chosen to represent the exchange in the California Fruit Exchange and the Fruit Growers' Supply Company.

The directors of the Southern California Sugar Beet Growers' Association have asked for a conference with owners of the various sugar factories in Southern California relative to securing better prices for sugar beets the coming year.

Manager Churchill of the California Lima Bean Growers' Association announces the sale of beans at \$14 a hundred, which is the highest price recorded this year. Adolfo Camarillo of Camarillo is accredited with the biggest bean sale thus far for the season, having disposed of 10,000 sacks at \$13.50, or \$135,000 for the single deal.

## The Coast

Arizona's state fair is to be held at Phoenix, November 12-17.

Medford, Oregon, hopes to get a \$750,000 beet sugar factory.

Idaho is rejoicing over a soaking rain after continued drouth.

The Oregon state fair held at Salem reports total receipts of \$64,000.

Sheep valued at \$30,000 were sold at the Washington state fair sheep sale.

Women of Portland are working in mills manufacturing boxes for apples.

"Hooverize pea straw" is the slogan of farmers of Spokane County, Washington.

Waterville, Washington, recently paid out \$5000 for one day's delivery of grain.

The Rogue River Canning Company is running full capacity, turning out 10,000 cans of tomatoes daily.

The late spring caused late harvest in the wheat fields of Eastern Washington. Harvesting is still in full blast.

Boise, Idaho, is suffering from hay shortage and fears a return of the enormous prices of last year when hay went to \$60.

The potato crop of Yakima and Puget Sound is now being harvested and growers assert that unless they get \$30 a ton they will store.

The campaign against rodents in Kootenai County, Idaho, has resulted in cleaning up some 6000 acres of farming land and 3000 acres of vacant land.

Arizona has made no pretensions as to being an apple state but is now making plantings in Graham, Greenlee, Yavapai, Navajo and Apache Counties.

Owing to the fact that apples have colored so slowly growers of the Wenatchee district of Washington will be compelled to make two or three pickings.

Cotton growers of the Yuma Valley of Arizona have ordered 52 cotton pickers from Mexico through Farm Labor Agent Davenport for the Imperial Valley.

Beet producers and manufacturers of Utah recently met in Salt Lake City and discussed contracts for next year's output and methods of production.

As a result of a wool pool formed by small flock owners of Ada County, Idaho, growers received an average of 47½ cents per pound. Forty-four ranchers contributed to the pool.

Farmers of Bellingham, Washington, are cooperating in the marketing of practically all farm products, and double returns are being received from straw because of their cooperation.

The Farmers' Union of the three states of Washington, Oregon and Idaho are discussing amalgamation of the organizations of the three states in order to more economically handle the grain crop.

Dates of the Pacific National Dairy Show at Portland have been changed from November 16-23 to November 7-15 so as not to conflict with the Pacific International Live Stock show which will be held November 19-24.

Gifford Pinchot, chairman of the live stock branch of the national food administration, will be present at the Northwest Live Stock Show to be held at Lewiston, Idaho, November 8-15, and will deliver an address to the stockmen.

## Breed Leaders

Every breed of livestock has its outstanding character the same as the human kind. A great dairy cow has proved her ability to produce anywhere up to 15 tons of milk annually; the trotting horse has secured his record around two minutes; the beefmaker has shown his ability to make the least amount of feed into the greatest amount of food; swine, sheep and others of the livestock family have shown themselves great characters. In addition—and here is where their worth is proven—these animals can transmit their productive power to their offspring.

Beginning with the issue of August 4 the Cultivator gave an account of Pietertje Bloom of the university farm dairy herd. Some things she has done and more that her daughters have done were chronicled. She was a most worthy leader in this series of articles. Others of her kind follow. More of the "handsome is as handsome does" type of animals will be given in the columns of the Cultivator during the next few months.

Written for California Cultivator By C. A. Briggs

**G**OLDEN Maidikins Boy, 127-408. All the Jersey men say that the butterfat test on a basis of cost of production is the only true test of a cow. They agree with breeders of dairy cat-

blue ribbons as evidenced by the fact that last year (1916) he was reserve grand champion at the Sacramento state fair, winning the same distinction at the Live Stock Show at Modesto, and being made grand cham-

Golden Maidikins Boy

tle of all breeds that the bull with daughters that can face the butterfat test is a good bull and should be at the head of a good herd. Judged in this way S. F. Williams of Orland has a bull worthy of notice by the practical dairymen. Judged by the showing standard, he always is seen and considered by the man who ties the

pion at Fresno. He carried off these honors in the face of hot competition. Golden Maidikins Boy was sired by a splendid animal, Alva Lady's La Foss Boy, Imported. His dam, Golden Maidikin, was a well bred cow and a fine individual, having very strongly marked dairy points. "The proof of the pudding is the eating," and the off-

spring of Golden Maidikins Boy is the proof that he is a true leader of his breed.

DAVID A. VAUGHN

David A. Vaughn, one of the well known cattlemen of Central California, died at his home in Porterville Saturday, October 6, following an illness of a little more than two weeks. He would have been 70 years old the day following his death. He was a native of Rhode Island and was one of those hardy pioneers who endured the hardships of frontier days and helped make of our state the golden land and beauty spot that it is. He has been a

resident of the state about 50 years and of Tulare County 45. During the early period of his residence in Tulare County he engaged in the sheep business and used to drive his sheep over land to San Francisco to the market. In later years he engaged in the cattle business in which he has been eminently successful. He owned several thousand acres of grazing land in the foothills in the eastern part of Tulare County. His cattle were always of good quality as he annually added to his herd a number of fine Herefords for breeding purposes. Always rugged in health he rode after cattle on his ranches until shortly before his death.—Martha L. Baker.

## September Record State Dairy Cow Competition

**T**HE state university, in charge of the state dairy cow competition, reports record of cows in the contest producing over 40 pounds of butterfat during September. There are 113 of these cows. The Cultivator would like to give record of each one, but lack of space prevents. Therefore we publish only the top-notchers of each herd. They are:

Mabel Wytje 2d, Holstein, nine years old, 182 days in milk, owned by Anita M. Baldwin, 1603.5 pounds milk, 3.89 per cent butterfat, 62.376 pounds butterfat.

Irene, Jersey-Holstein, six years old, 123 days in milk, owned by Floyd Beebe, 1053 pounds milk, 4.5 per cent butterfat, 47.385 pounds fat.

Leda De Kol Ormsby, Holstein, four years, nine months, 127 days in milk, property of A. M. Bibens, 1788.4 pounds milk, 2.73 per cent butterfat, 48.823 pounds fat.

Tillie, grade Holstein, seven years old, 102 days in milk, owned by Bohnett Bros., 1415.3 pounds milk, 3.49 per cent butterfat, 49.390 pounds fat.

Pansy, grade Jersey, 152 days in milk, owned by J. M. Bomberger, 1002 pounds milk, 5.5 per cent butterfat, 55.110 pounds fat.

Beauty 1st, grade Jersey, eight

years old, 180 days in milk, owned by J. W. Coppini, 951 pounds milk, 6.31 per cent butterfat, 60.674 pounds fat.

Clementine Mabel, grade, 11 years, 11 months old, 221 days in milk, owned by Dr. J. W. Henderson, 906.6 pounds milk, 4.56 per cent butterfat, 41.341 pounds fat.

Number 458, grade Guernsey, five years, two months old, 157 days in milk, owned by Hollow-Hill Farm, 820.5 pounds milk, 7.58 per cent butterfat, 62.194 pounds fat.

Roan Cow, grade Guernsey, seven years old, 164 days in milk, owned by Iver Iversen, 1167 pounds milk, 5.11 per cent butterfat, 59.634 pounds fat.

Number 66, grade Holstein, two years, 11 months old, 191 days in milk, owned by F. J. Kell, 951 pounds milk, 4.7 per cent butterfat, 44.697 pounds fat.

Eminent's Miss Pratt, Jersey, six years, four months old, 68 days in milk, owned by McLouth and Dada, 1119 pounds milk, 3.92 per cent butterfat, 43.865 pounds fat.

Goldie of Venadera, Jersey, seven years, one month old, 272 days in milk, owned by Guy H. Miller, 824 pounds milk, 5.26 per cent butterfat, 43.342 pounds fat.

Miss Valley Mead De Kol Walker Holstein, three years, four months old

## PERFECTION MILKER

"I Milk Thirty Cows An Hour, Alone."

**THAT'S** what farmers who use the Perfection are saying from coast to coast.

The Perfection is the friend who comes in without grumbling or complaining and does the milking. He milks each cow carefully and quickly. He keeps the milk clean. He doesn't howl and swear at the switching of the cow's tail. His quiet businesslike ways seem to please the cow better than those of the hand milkers. With one good man he can milk 30 cows in an hour. And he never quits his job.

The Perfection milks nature's way, with a gentle suction, a spiral downward squeeze, followed by a period of complete release. The

suction is adjustable to exactly suit hard or easy milking cows. The Perfection teat cup fits all sizes of teats. It is easy to clean. If your son or your hired man has been called to the colors, you will still be able to get your milking done easily, if you have the Perfection to help you. You can even increase the size of your herd, if you wish and thereby do your share in increasing the production of dairy foods of which the country really is in need.

C. F. Andrews of Richmond, Vermont, says:

"I milk 32 cows with my Perfection Milker in a satisfactory manner in about an hour. I see no change in the amount of milk we get. We have no teat or udder trouble. I know of 40 Perfections in this State, each one of which are satisfactory, and if I were to install another outfit, it would be a Perfection."

T. P. Peterson of Blooming Prairie, Minn., says:

"I use two double unit Perfection Milkers, and with them milk 27 cows in less than an hour. My cows made more butterfat per cow last year, milked with a Perfection Milker, than they ever made before. I bought another Perfection Milking Machine last fall for my other farm. I prefer the Perfection to any of the other makes that I have seen, and I believe it is easier on the cows, and the expense of keeping it in repair is very small. I am satisfied that it has no bad effect on the cows if properly operated. I would not be without a Perfection Milker as long as I milk cows."

Get a Perfection Milker and increase your earning capacity. Write today for free copy of our new illustrated catalog.

Perfection Manufacturing Company

2113 E. Hennepin Avenue

San Francisco Stock Show to be Annual Event

Written for California Cultivator By F. F. Stonerod

IF AN attendance of more than 400,000 people during the two weeks of San Francisco's big Land and Live Stock Show is an indication of California's interest in this kind of an exposition then it should be made an annual event, and in all probability it will be.

Last week the beef cattle, world's champion hogs, university farm sheep, and a few stylish Arabian-Welch ponies replaced the dairy exhibits of the previous week. Interest in the show increased rather than decreased. Most of the cattle which showed at Sacramento in September met in the ring at San Francisco to be passed upon by Frank Brown of Carleton, Oregon, one of the very best judges of beef cattle in America. His work was a revelation to the ringsiders. Mr. Brown had much more difficult class to judge in the Shorthorns than in the Herefords. W. M. Carruthers brought up his 1916 champion bull, Count Glory, and walked away with the senior and grand championship. This bull was not shown at Sacramento as he was sick at the time and in poor condition. But he was certainly showing well at San Francisco. To win he had to beat two mighty fine bulls in T. T. Miller's Diamond Choice and the Jack London Ranch entry, Roselawn Choice. Count Glory's superior covering, smoothness and mellowness of flesh won his own purple ribbon.

Mr. Miller's Greendale Sultan easily won the senior yearling bull prize but lost to Count Glory for the championship. The great Miller cow, Brandsbys Jinny 18th, won first prize aged cow and championship. This maroon is getting better all the time and those who have seen her at the different shows this year know what that statement means. She is a hard cow to beat in every way except possibly in her hind quarter which will in all probability fall out after she becomes accustomed to the coast conditions of climate and feed.

The Pacheco Cattle Company won first in the two year old cow class, the best filled class in the Shorthorn show. There were six entries and the judge studied a long time before making his decision. Pacheco Lass 80th,

a daughter of Trudale, bred and owned by Mr. Hawkins, finally won the blue. Mr. Brown said she had the sweetest Shorthorn character, the best topline, and was more evenly fleshed than the two heifers placed below her. The Miller heifer placed third, Golden Queen, gave both animals above her a hard run. The Ormondale heifer, Mayflower 4th, who won first in a larger class at Sacramento, was placed second chiefly because she has put on flesh too rapidly since that time and was a little too rough and patchy. However she had more covering over the loin and was much

At top: Sonoma, 625000, first prize aged Hereford bull, owned by Chas. Rule.  
Middle: Pacheco Lass 80th, first prize two-year-old Shorthorn heifer, bred and exhibited by Pacheco Cattle Company.  
Bottom: Mayflower 4th. First prize Shorthorn two-year-old heifer at Sacramento, 1917, owned by Ormondale Company.

Jerseys for Net Profits

You're in the dairy business for profit—the net profit that your herd has made you at the end of the year will determine the size of your bank account. Jerseys yield the largest returns from every ounce of feed—proved by tests at two great expositions. Jersey milk averages 5.3% butter fat, 9.1% solids not fat—highest of all breeds. Buy a Jersey bull.

Write the breeders advertised below for prices, pedigrees, etc.

thicker than the Hawkins heifer. She should made the Ormondale Company a wonderful breeding cow.

The Hereford section was an attraction to spectators all week. Chas. Rule of Duncan's Mills sent over his Denver prize winner, Sonoma, more to help out the breed exhibit than to win, as the bull was in poor show condition. He was the only aged bull in the class and will show next year at close to 2500 pounds weight if he is properly fitted. He is the rough, rugged type so popular with the range men and has both scale and bone in abundance. Superior finish won the championship for the Lively bull, Bertram Fairfax. He is a typical Fairfax bull with thick smooth flesh, beautiful head, is wide, and set low on the ground. The coarseness of the shoulder makes his heart girth appear smaller than it is in reality. His remarkable development of loin and quarter offsets the above mentioned defect, and this will probably fill out as he matures.

Alexander and Kellogg, and Thos. Harrison exhibited their milking Shorthorns before an admiring crowd. Lady Beatrice, the cow that was sen-

## SAN JOAQUIN COUNTY COW TESTING ASSOCIATION

Following five herds led in milk production during the last testing period of 31 days, September 24 to October 25, giving name of owner, number cows in herd, average pounds milk: Gottshall & Magruder, 24, 951; County Farm, 34, 918; Brum & Thorp, 14, 764; F. J. Kell, 21, 738; W. T. Miller, 21, 716.

Following five herds led in butterfat production, giving name of owner, number cows in herd, average test, average pounds butterfat: County Farm, 34, 3.4, 35.9; Brum & Thorp, 14, 4.6, 34.5; F. J. Kell, 21, 3.9, 32.9; Gottshall & Magruder, 24, 3.7, 31.5; R. W. Fisher, 17, 4.2, 29.4.

Following cows produced 45 pounds or more of butterfat, giving name of owner, name or number of cow, breed, pounds milk, test, pounds butterfat: County Farm, 14, G. H., 1860, 4.1, 76.2; County Farm, 32, G. H., 1541, 4.5, 69.3; Gottshall & Magruder, Lady, H., 1568, 4.0, 63.5; O. Fowler, Jane, G. J., 1052, 5.7, 60.1, County Farm, 126, G. H., 1661, 3.2, 53.1, Oak Grove Dairy,

At the Poland-China Sale

Some of the people gathered at the Kings County Poland-China Sale at Hanford last week.

ior and grand champion at Sacramento, duplicated her winnings at San Francisco. Island Buttercup, also owned by Alexander and Kellogg, won the junior champion heifer. Thos. Harrison showed a splendid cow in Lady Sunshine, a cow with wonderful udder development and of ideal dual purpose type. She was handicapped by the fact that she was just freshening. Golden West beat Westward Ho for the bull championship, reserving the state fair decision.

The special herd prize offered by Hale Bros., Inc., for the four best beef animals in the show was won by T. T. Miller on Diamond Choice, Brandsby's Jinny 18th, White Mayflower, and Greendale Sultan. Both Herefords and Shorthorns competed for this coveted prize, and the line-up in the ring was the piece de resistance of the entire show.

Frank Brush shipped his world champion Berkshires direct to the stock exhibit as soon as they arrived from Omaha. They were a sensation from the time they arrived till the close of the show. California's ability to go out and win in any competition has been demonstrated once more, and Mr. Brush deserves all the high honors he has won because he went to the great expense of shipping across the continent to fly the California colors at America's biggest swine show. A more detailed account of the Brush Berkshire herd will be published in an early issue. It showed at Sacramento, Salem, Oregon, and Omaha before returning to San Francisco.

& Thorp, Sweet-Lips, Jersey, 1183, 4.8, 51.0; W. J. Miller, 17, G. H. 1017, 4.8, 49.0; Gottshall & Magruder, H. Peterji, H., 1111, 4.4, 48.9; W. T. Miller, 19, G. H. 1476, 3.3, 48.7; J. De Carl, Blucher, G. H., 1200, 4.4, 52.8; Brum 225, G. H., 1060, 4.5, 47.7; W. E. Vandever, Colorado, G. J., 853, 5.5, 46.9; N. H. Locke Company, 115, J., 912, 5.0, 45.6; Mrs. E. C. Clowes, 53, G. H., 1062, 4.7, 49.8; Brum & Thorp, Miss B., J., 990, 5.0, 49.5; W. T. Miller, 21, G. H., 1468, 3.3, 48.4.

A good thrifty condition in breeding animals keeps the cost of maintenance at a reasonable level and insures maximum production. Such condition may be had by a judicious use of roughage and pastures.

Red Crown's continuous chain of boiling points insures maximum power and mileage.

LIVE STOCK SEED SELECTION

Written for California Cultivator  
By W. S. Guilford

ELECTION of seed corn, barley, wheat and other grains is being urged by state and county councils of defense as one of the most effective means of increasing the production of food. It is quite as important that the same care be used in the production of livestock. It is just as unpatriotic at this time to use a scrub boar as it is to plant seed of 70 per cent germination or of a variety that produces small heads.

In order to make the greatest possible amount of meat or milk a breeder must have at the head of his herd or flock a sire with the ability to transmit these characteristics to his offspring. These sires can be secured from California breeders of pure bred livestock. A large number of these are represented in the advertising columns of the Cultivator. Make a study of the advertisements a part of your war duty—and be sure that your next crop of livestock is "sired" right.

A NEW GRASS

A San Diego County subscriber, G. D. Stead writes regarding "Oryzopsis milaceae," a grass which for 30 years has been growing and doing well in San Diego County. As Oryzopsis is somewhat of a tongue twister he has looked for a more pronounceable name, and it has been suggested that San Diego grass or "Smilo" grass be used. Regarding it Mr. Stead says:

"I inquired about the grass of the former owner, Mr. Steele. He said he received a small package of the seed from the University of California about 30 years ago, and planted it on a hillside.

"I then wrote to the university for information regarding it, and upon looking it up, they found that a small lot of seed had been received from southern Europe in 1886, and the agricultural department had sent packages of the seed to different parts of the state. A small plot on the university campus was also planted with the seed and although neglected all these years, it is still thriving. The university gave it the scientific name of "Oryzopsis milaceae," which, translated, means "many flowering millet."

"On one plot, two-year-old roots, we cut an average of over six tons of hay per acre at first cutting, and where the ground was irrigated we made three cuttings in one season. On one plot from seed planted the previous October three cuttings were made. The three cuttings totalled about seven tons."

WINTER RAPE FOR PIGS

Rape offers the means of an economical gain in pork and at the same time a saving in the more concentrated feeds.

Sown in the fall rape makes an excellent supplementary feed for pigs during the winter months. When sown in any of the states in the Cotton Belt during September or October, usually it is available for pasturage in about 50 days. If seeded broadcast, use about five pounds per acre. The more satisfactory method, however, is seeding with a drill and cultivating; this is especially true if the ground is poor. The rows should be at least 24 inches apart in order to give sufficient room for a horse and plow.

Pigs do best when changed from one place to another for pasturage. Convenient lengths of woven wire are quite handy as portable fences to divide portions of the rape field. In this manner the pigs will clean up the rape more thoroughly.

We may add that some Californians are investigating as to possibility of raising rape for seed for manufacture of oil. A good rape seed will run 26 per cent oil. This oil is used for illuminating or in Europe as a bread oil, i. e., for brushing over freshly baked loaves; in this country for salad oil; also in steel works for tempering. There is a dearth of this oil because of the war.

The largest number of cattle ever received at the South Omaha market in a single day was received on September 24, 24,500 head, comprising 950 carloads.

# The Holstein Event of 1917

## Bulls of Equal Breeding and Individuality:

—A son of King Korndyke Pontiac out of the 36 pound junior three year old daughter of Prince Gelsche Walker, Miss Valley Mead De Kol Walker. Highest record bull ever offered at public sale in California.

—A son of King Valdessa out of the world's record heifer FINDERNE Soldene Hengerveld, 35.33 pounds butter in seven days at first calving.

—A son of King Mead of Riverside out of a 33 pound cow that made over 1000 pounds butter in one year. A show bull mostly white in color.

—A son of a great 32 pound cow that will make around 1200 pounds butter this year.

—A son of Spring Farm King out of a 31 pound dam that is a promising candidate for a higher record.

—A beautiful young grandson of King Korndyke Sadie Vale out of a 29 pound dam that has a 34 pound three year old daughter.

—A grandson of Prince Gelsche Walker out of a 25 pound three year old daughter of a 34 pound cow.

## Six 30 pound Cows

Fourteen daughters of 30 pound cows.

- A 29 pound four year old.
- Two daughters of 29 pound cows.
- Two 28 pound cows.
- Six daughters of 28 pound cows.
- Two 27 pound cows.
- Four daughters of 27 pound cows.
- Two 26 pound cows.
- Four daughters of 26 pound cows.
- Twelve cows and heifers with records from 20 to 25 pounds.

## Yearly Record Females

- A 1000 pound cow.
- A daughter of a 1000 pound cow.
- Two 800 pound cows.
- Four daughters of 800 pound cows.
- Six daughters of 700 pound cows.
- Three 600 pound cows.

—A son of Prince Gelsche Walker out of a 27 pound dam.

—A son of King Morco Alcartra out of a 23 pound two year old daughter of Prince Gelsche Walker.

—A son of King Valdessa out of a 30 pound dam.

## Selected from Among the Top of 15 California Herds

## DAUGHTERS OF GREAT SIRES

The splendid females include daughters of King Korndyke Sadie Vale; King Segis De Kol Korndyke; Tidy Abbecker Prince; Prince Gelsche Walker; King Mead of Riverside; King Segis Pontiac; Segis Pontiac De Kol Burke; Korndyke Queen De Kol's Prince; It; Annie De Kol Lakeside Model; King Walker 5th; King Segis Pontiac Alcartra; Fairmont Spofford Pietje; Prince Gelsche Walker Korndyke; Spring Farm Pontiac Cornucopia; King Korndyke Pontiac; King Morco Alcartra; Admiral Walker Prilly; King of the Pontiacs Small Hopes; Arcady Pontiac Wayne Hengerveld; King Pietertje Hartog.

## BRED TO GREAT SIRES

The high record females in this offering are bred to some of the greatest bulls of the breed, including: It, son of the first 37 pound cow and first 1200 pound cow; Prince Gelsche Walker, sire of a 36 pound junior three year old and a 34 pound junior four year old; King Mead of Riverside, sire of a 35 pound cow and a remarkable list of high testing yearly record daughters; Sir Aaggie De Kol Acme, son of a great 35 pound cow that will make around 1350 pounds butter this year; King Morco Alcartra, son of Tilly Alcartra, the world's greatest dairy cow; King Segis Alcartra Prilly, son of the \$50,000 bull and a 30 pound four year old granddaughter of Prilly; King Segis Alcartra Abbecker, son of the \$50,000 bull and a 30 pound daughter of Tidy Abbecker Prince; King Korndyke Pontiac, one of the best sons of King of the Pontiacs; Prince Gelsche Walker Korndyke, \$4000 son of Prince Gelsche Walker; King Pontiac Netherland Segis 3d, 34 pound grandson of King of the Pontiacs; King Pontiac Segis Korndyke, 30 pound proven son of King Segis De Kol Korndyke; King Korndyke Pontiac 20th, 36 pound son of King Korndyke Pontiac; Prince Alcartra Korndyke, son of Tilly Alcartra; Sir Veeman Korndyke Pontiac, 30 pound son of Sir Veeman Hengerveld; Segis Pontiac De Kol Burke Luit, 32 pound son of Segis Pontiac De Kol Burke.

The offerings in this sale were selected by a committee of three from among the greatest animals of the Holstein-Friesian breed in California, and the occasion was made possible only with the broad spirited cooperation of the fifteen breeders represented to make an offering of eighty head, every one of which is an individual attraction.

**This is the opportunity of a lifetime to secure a foundation herd of the first rank and a bull fit to head such a herd**

It is worthy of consideration also that aside from the advantages of making your own selections from this group of cattle that has been painstakingly selected by a committee of three, you are buying in a sale backed up by the strongest livestock selling organization in the west whose contract with sellers is an added safeguard to the buyer.

**Every Animal over Six Months of Age Tuberculin Tested and Guaranteed Against Tuberculosis for Sixty Days**

## Field Notes From the Live Stock Men

Material declines have been made in beef cattle and hog prices during the past week.

The newest fair to appear this fall is the Pan-Handle state fair, held at Amarillo, Texas.

The 46th annual of the Wisconsin Dairymen's Association will be held at Janesville, November 20-22.

Over 1100 entries were made in the Columbus horse show which was staged at the same time as the National Dairy Show.

The American Tunis Sheep Breeders' Association recently met in annual session and elected G. C. Kreglow, De Graff, Ohio, secretary.

H. J. Waters, president for many years of Kansas agricultural college, has resigned and taken the position of managing editor of the Kansas City Star.

The seventh annual Pacific International Live Stock Exposition will be held at North Portland, Oregon, November 19-24.

Entries have closed for the great International at Chicago. An effort is being made to excel if possible the record of 1917, which was the most remarkable show ever pulled off in Chicago.

Dean W. L. Carlisle, formerly of Colorado, more recently of Oklahoma agricultural college, has removed to Calgary, Alberta, and is associated with one of the largest Percheron studs in the world.

The Breeders' Gazette is discussing a separate show for Percheron horses. There will be practically no importation of Percherons for years to come, and every step should be taken to encourage conservation of stock now in America.

At the Tri-State Fair at Memphis beef and swine classes were filled far better than the dairy classes. The surprising feature was the immense number of Polled Durhams. There were more than one dozen exhibitors in this class.

Wool values are going higher under great demand. The stock in warehouses has shrunk rapidly. A shipment of 4000 bales is now afloat from Australia. Fine Ohio wools are now selling at 68 cents, Washington delaines at 85, Michigan delaines in Boston, 75.

The Breeders' Gazette refers to one small farmer in the Middle West who keeps a flock of ewes, likewise keeps account of expense and returns from the flock. Each of the old ewes during the past year produced \$35 worth of lambs and wool and they were fed very little grain.

Final returns from the awful fire in the Kansas City stockyards indicate that around 10,000 cattle and 3000 swine were burned. The value of this stock is estimated around three-fourths of a million. Damage to pens and buildings will carry the loss far beyond the million dollar mark.

Carnation Holsteins go by express to National Dairy Show at Columbus, Ohio. The show herd of 27 registered Holsteins belonging to the Carnation Stock Farms of Seattle, and which have won the majority of blue ribbons at the Chehalis, Spokane, Yakima, Puyallup, Washington, and Salem, Oregon state fairs, were exhibited at the National Dairy Show, in Columbus, Ohio, held October 18 to 27, 1917.

A. D. McCarty, owner of the Riverina Farm at Modesto, has joined the ranks of Poland-China breeders. While at the state fair he bought some very fine gilts from the university farm at Davis, sired by a son of the great breeding boar, Big Bob. He commissioned Prof. J. I. Thompson to purchase an Eastern boar for him, and word has just been received that Prof. Thompson selected Kansas King, by King of All, paying \$300 for him. This boar was first senior yearling at the recent Kansas state fair and has already made an enviable reputation for himself in the East. Mr. McCarty is buying the right kind of foundation stock and undoubtedly will develop a fine herd.

## The Higher the Price of Butter the Greater Your Loss without the Best Cream Separator

BUTTER prices are going higher every week.

Even at present butter prices no cream producer can afford to be without a cream separator or to continue the use of an inferior or half-worn-out machine another day.

And the higher the price goes the greater your loss.

Even if you have only two or three cows a De Laval would pay for itself in a few months.

If you have a larger herd your need of the best cream separator you can buy is just so much more urgent.

A De Laval Separator bought now will more than save its cost by spring. It can be bought for cash, or if preferred, on such liberal terms that it will easily pay for itself in its actual savings over any other separator or creaming system.

See the nearest De Laval agent right away and let him show you what the De Laval will save for you. If you do not know the De Laval agent, write direct for any desired information.

# Keep the Hen That Lays

By Prof. T. E. Quisenberry

**T**HE good hen is now paying better than ever, while the poor hen is losing more than ever. The main trouble lies in the fact that all hens are not good hens. In fact, if we use as a standard of a good hen a production of 150 eggs per year, we find a large portion of all hens in America fail to qualify. It seems to be a recognized fact, based on the last census figures, that the average farm hen lays about 75 eggs. We believe this is perhaps too low a figure for the present, the 1917 average hen. We believe that the increase in breeding from standard bred stock in the past five to ten years has already made an improvement in the egg production of the average hen.

In these days when every ounce of food should be conserved by feeding it only where it will produce its like, or more, in food value, and also in these days of high priced grains, we should take steps which insure the keeping of all hens with good laying ability while the non-producers should be culled out and sold for meat.

The present American Egg Laying Contest and former contests have proven the following methods profitable, especially under present conditions:

Keep the birds with rather large plump combs and wattles.

Hens with pale vents, pale beaks and pale legs have been good layers.

Keep the late molters.

Keep the pullets which mature quickly and start laying first. Those which start laying when less than 200 days old, or nearest that age, are the best layers if they have had the right environment.

Market those which have been slow to feather or seem to lack vitality.

The skin of the best layers should be rather loose and flabby on the abdomen between the vent and breast bone.

The pelvic bones must be thin, straight, flexible and wide apart.

Market the hens which are bagging

behind and which have a heavy, fat, thick abdomen which hangs below the point of the breast bone.

Keep the hustlers and heavy eaters that go to bed late and with full crops.

Birds that have long toe nails that show no signs of being workers are usually unprofitable.

If a bird meets the above requirements it should have a broad back, long body, stoutly built and be in good flesh.

If a bird is not molting and still has a small dried-up comb, covered with a sort of whitish substance, or if a bird has thick or crooked pelvic bones which will be found on each side of the vent and above the point of the breast bone, these are always money losers.

## American Egg Laying Contest Report

The hens in the American Egg Laying Contest finished September with a very good average, considering that many were just finishing the molt and that many of the hens with the best laying record also proved medium late molters, the result being they were still in the molt at the close of the month. Two pens tied for leading honors for the month in egg production, each pen of five hens producing 83 eggs. They were of Barred Plymouth Rocks from Maine and of White Wyandottes from Indiana.

Forty-one different hens produced 20 or more eggs each during September, while 11 produced 25 or more eggs each.

A Black Rhineland from California leads all the hens in the contest with a record of 247 eggs for 11 months.

The six leading pens in total egg production since the beginning of the contest up to October first are as follows:

First pen, Illinois, White Wyandottes, 955 eggs; second pen, Pennsylvania, S. C. White Leghorns, 921; third pen, Missouri Barred Plymouth Rocks, 901; fourth pen, Arkansas, White Wyandottes, 875; fifth pen, Missouri S. C. W. Leghorns, 875; sixth pen, California, R. C. Black Rhinelanders, 858.

## Demand for Guineaas on Increase

**I**NCREASING demand for guineas, a specialist of the department of agriculture says, comes from hotels and restaurants in the

large cities, which are always eager to buy prime young stock, guineas being a good substitute for game birds such as grouse, partridge, quail and pheasant. The present supply comes largely from small farm flocks of ten to 25 fowls. Such flocks require little care and expense to raise; consequently the marketing price is largely profit.

And as for that undesirable cry of the guinea, admitting that this is a rather objectionable habit, it might often be listed as an asset. It gives warning of marauders and also, backed by a pugnacious disposition, constitutes an effective show of fight against hawks and other enemies. In fact, some farmers raise a few guineas with their turkeys and allow them to roost together so that a warning will be given if any theft is attempted during the night.

One poultryman near a New England summer resort has raised as many as 400 guineas in one season, selling them in August when they

weighed about one pound each at \$1.25 a pair. Wholesale prices in New York usually range from 75 cents to \$1.00 a pair for dressed guineas weighing two pounds to the pair, and from \$1.25 to \$1.50 a pair for those weighing three to four pounds to the pair. Old guineas are not wanted and seldom bring more than 50 or 60 cents a pair.

Of the three varieties; Pearl, white and lavender, pearl is by far the most popular. It has a purplish gray plumage regularly dotted or "pearled" with white and is so handsome that frequently the feathers are used for ornamental purposes. Breeding stock of the various varieties usually sells for \$2 to \$3.50 a pair, or from \$3 to \$5 a trio. Eggs from purebred birds for hatching can be obtained for 75 cents to \$1.00 for 15. During the last few years a limited market for guineas has developed among commercial hatcheries which have an outlet for a few day-old guinea chicks along with their ordinary chicks, ducklings, goslings, and turkey poults. While guineas can be kept in the best condition upon free range, they can be confined if necessary and satisfactory results obtained.

The marketing season for guinea

fowl is during the latter part of the summer and throughout the fall. At about 2½ months of age guineas weigh from 1 to 1½ pounds, and at this size they begin reaching the markets in August. As the season advances the demand is for heavier birds.

The usual practice is to place them on the market unplucked. They are more attractive with the feathers on and sell more readily. When dressed the small size and dark color of the guinea are likely to prejudice the prospective customer. For hotel and restaurant trade, however, guineas should be dressed in the same way as common fowl. Before shipping any birds to market, it is advisable to inquire of the dealer to whom they are to be shipped whether the feathers should be removed.

If the guineas are to be marketed with the feathers on, all that should be done is to bleed them by severing the vein in the roof of the mouth, allowing them to hang head downward until bleeding is complete. If the feathers are to be removed, this should be done by dry picking. The vein in the roof of the mouth is severed first to insure thorough bleeding, and the knife then thrust through the groove in the roof of the mouth into the brain. When the brain is pierced the feathers are loosened by a convulsive movement of the muscles and can be removed easily.

## DRY MASH

### The Best Feed on the Market

Has the highest protein at the lowest price \$2.80 per 90-lb. bag, subject to market changes; see that your hens eat as much Dry Mash as they do grain; feed them lightly of grain in the morning and make them work for it; either have a scratching pen or spade up a part of the ground and rake the feed under; keep "A-1" Dry Mash in a dry form before them all day; about one hour before feeding them their grain in the evening WET their Mash and let them eat all they will; put it on top of the Dry Mash, then feed them all the grain they will eat; this stuffing process will give them a full crop to carry them through the long night of inactivity; analysis is printed on every bag; give it a trial. At Your Dealers or

The Globe Mills, Los Angeles

Make the reading of advertisements in the California Cultivator a habit. They will broaden your knowledge of the manufacturing improvements.

Science has made a discovery of great importance to poultrymen—LEARN ABOUT IT.

It will only take a minute to address two postal cards. Two cents is not much money, but it may mean the difference between success and failure.

Invest one cent in a postal to the Dept. Agriculture, Berkeley, Cal.; ask for bulletin 162 (sent free) it is of great importance to all who keep poultry. Find out what buttermilk means to your poultry's health and your poultry success.

Invest one cent in a postal to Globe Mills, Los Angeles, for a free sample of GLOBE A-1 BUTTERMILK MASH and valuable feeding information.

GLOBE A-1 BUTTERMILK MASH costs but little more than ordinary mash. Learn why it's worth a great deal more.

You can stop Chick Funerals. Get more Eggs. Keep your flock in GLOWING HEALTH; let us tell you how.

Spend two one cent stamps today; write the government, and write the Globe Mills.

GLOBE MILLS, Los Angeles

Your dealer will supply you with Globe A-1 Buttermilk Mash.

## Produce Eggs at 17¢ a Doz.

The U. S. Dept. of Agriculture at the Experimental Farm, Beltsville, Md., during the past year has proven conclusively that if you make your hens LAY instead of allowing them to LOAF you should be able to produce eggs at a food cost of about 16½¢ per dozen, even at present feed prices—AND YOU CAN MAKE THEM LAY.

You may not do quite as well as the Government's experts but you can come mighty close to it by mixing

### Pratts Poultry Regulator

daily with a good egg-making ration, at a cost of one cent a month per hen. Do this and we guarantee your flock will produce the extra eggs that bring the big profits.

Pratts Poultry Regulator is a concentrated tonic and conditioner—not a food. It makes the ration more effective, therefore cheaper. It strengthens and tones up the entire system in a natural way—sharpens the appetite and improves digestion—enriches the blood—regulates the bowels—insures perfect health—makes the egg-producing organs do full duty—brings a profitable egg-yield.

Our dealer in your town has instructions to supply you with Pratts Preparations under our square-deal guarantee—"Your money back if YOU are not satisfied"—the guarantee that has stood for nearly 50 years.

Write for 48 page book—Pratts Practical Pointers on the Care of Poultry.

### BUY A TRACTOR TO FIT YOUR FARM

The wise farmer will not buy a tractor because it is light or heavy, because it has two, three or four wheels, nor because it has any other mechanical feature which the salesman or advertisement claims makes it "better than the best."

The wise farmer will buy a tractor to exactly meet the requirements of his farm and one that will come within his means to buy and operate.

There are now on the market tractors to fit the small farm as well as the large; tractors which are economical enough to buy and operate so that even the 80 acre renter will find them a profitable investment.

The economies and the profit possibilities of a tractor which fits your farm are boundless, and it behooves every farmer to post himself on the different makes of tractors by writing for and carefully reading the literature which tractor manufacturers will gladly send upon request.

### BULB CATALOG

The Morris & Snow Seed Company is mailing its 1917-18 bulb catalog. It is small—cost pocket size—but full of information as to bulbs, wild flowers and hardy annual seed.

PLANTING WHEAT

SURVEY of the wheat conditions in both the great valleys emphasizes importance of timely planting.

In practically all instances where a wheat crop was poor the reason was found to be improper preparation of the land or late planting. Even where the rainfall was not up to normal and the season was cold, crops were good where the preparation of the land was good and planting timely. Barring a few exceptional conditions the best crops of wheat are produced from plantings made about December 1. If planted late in December or later the crop will not have sufficient time to develop its roots and crown before growing weather comes in the spring and its ripening will be delayed beyond the period of optimum moisture and climatic conditions.

The following figures show the influence of the time of seeding on the yield of wheat at the university farm, 1917. The land was prepared the same in both trials. The figures represent the average of three plots for each of the two varieties.

Yield, Pounds Per Acre

Variety	Seeded		
	Dec. 15	Jan. 19	Mar. 3
Defiance	3754	1467	1508
Sonora	3825	1742	1178

Sometimes wheat may be planted in the dry soil before the fall rains set in. The advantage of this practice is, especially on large areas, in getting the seed in before operations are prevented by the rains. The disadvantages are that more seed per acre is generally required and the stand and growth are not likely to be uniform. All things considered planting is best accomplished by the drill and should be done at a time when there is sufficient moisture in the soil to give the seed an even and quick germination. When the land is weedy planting should be delayed until after the first rain in order that by harrowing early, germinating weeds may be killed.

The above is from Prof. Jno. W. Gilmore's circular Number 172, "Wheat Culture." It may be had by writing Experiment Station, College of Agriculture, Berkeley. It gives most timely information at this moment when "more and better wheat" is the slogan. Everyone who expects to grow wheat this year should write for it.

We quote again as to main points in growing a crop of wheat as summarized in this bulletin.

Proper and timely preparation of the land for planting.

Importance and methods of maintaining the organic matter in the soil.

Choice of seed respecting both the variety and quality.

Timeliness and manner of planting the crop.

Time, methods, and kinds of fertilization.

Timeliness and methods of harvesting and handling the crop.

WALNUT PICKER

I notice on the cover of a recent issue of the California Cultivator walnut harvesting scene with picker stooping to pick up the walnuts. I suggest a mechanical method consisting of a tin cylinder three feet long, large enough to admit the nut at the lower end with a short funnel and four flat springs soldered at one end. This could be carried in one hand and pressed over the nut until the appliance was filled when the nuts could be emptied into a pail. I think this would be practical and less irksome.—G. A. Butterfield, Cook.

It appears to us that this would be altogether too slow for wartime harvesting. Nimble fingers could gather in many nuts before such an appliance could be fitted to gather in one. However harvesting of walnuts all day or all month is no rocking chair job, so we are ready for the economical harvester.

SAME OLD STORY

She—How did they ever come to marry?

He—Oh, it's the same old story. Started out to be good friends, you know, and later on changed their minds.

The best flagpole American farmers can erect is the silo. But why not put up a flagpole too?

FRUIT TREES

Dried Apricots This Season

Brought as High as 17½c. per Pound

We know of nothing that pays better than Apricots. One farmer in the Lemoore district, thirty miles south of Fresno, sold his crop of apricots this year on the trees for \$6,600.00. As he only had ten acres, this returned him \$660.00 per acre, without harvesting expense. While this is one of the best records for the season that we have heard of, many other growers have received large returns.

Throughout Southern California districts, the Tilton Apricot is quite a favorite. On account of its late bloom, it is more free from frost than many other varieties.

We received a letter recently from Libby, McNeill and Libby, canning people, stating that they believe the Tilton Apricot to be the best apricot for canning purposes, having canned this season 1100 tons of this variety at their Selma plant.

Descriptive Catalog Free

Our catalogue this year will describe more fully than ever before all varieties of fruit-bearing trees. Anyone contemplating planting an orchard this coming season will find this book very helpful to them. It is sent free on request.

### A STRANGE MISTAKE

My daddy says that once he was  
A little chap like me,  
So why he says the things he does  
I really cannot see.

He says he cannot understand  
Why I so dote on noise,  
And like to play that I'm a band,  
Deserting quiet toys.

He says he can't imagine why  
I stand upon my head,  
Instead of on my dignity  
Like boys who're better bred.

He says he cannot comprehend  
The reason why I can't  
When, up the stairs I mount, pretend  
That I'm a human ant.

Instead of stamping on the stair,  
As though I thought that I  
Were nothing but a lively pair  
Of hippopotami.

From all of which I greatly fear  
In days beyond recall  
My dear old daddy, it is clear,  
Was not like me at all.

But like some other little chap,  
Whose name I never heard,  
Who likes to sit on some one's lap  
And never says a word.  
—John Kendrick Bangs, in St. Nicholas.

### BO PEEP'S BLACK SHEEP

**T** HERE goes that girl again," said the Black Kitten. "She's been running up and down hill all morning, and now she's crying. Wonder what's the matter."

Nan got up and looked out of the window. It was the dining room window, where the window seat was, and the geraniums. Nan liked it best because it was sunny there, and the Kitten liked it because he could slap at the geraniums and make believe they were red grasshoppers. Not that the kitten had ever seen a red grasshopper, but that made it all the more interesting to make believe that there were such things.

"She seems to be lost," said Nan. "I don't remember her; do you, Kitten?"

"Well, somehow she looks as if I had seen her before," said the Black Kitten, wisely. "See her big flapping straw hat with the big blue bow in front, and her silly, frilly skirts, and the bunch of curls bobbing all round her face. And she's got a big hook in her hand."

"It isn't a hook," cried Nan. "It's a crook. I know who she is."

"Tell me," called the kitten, but Nan has jumped down from the window seat and was running up the hill, so of course the kitten had to run after her.

"Little girl, little girl!" called Nan, breathlessly, but the girl with the big bow on her hat never stopped running. There was a big blue bow on her crook, too, and Nan felt very much worried, because she knew who it was. All at once the Black Kitten dashed ahead and got right in front of her, and she tumbled down, crook and all. When Nan came up the kitten was sitting down looking aggravatingly important and its whiskers stuck out with importance. Nan always declared that she never, never saw such a small kitten in her life with such bristly, important whiskers; which, of course, made the kitten more vain than ever.

"I made her stop," he said triumphantly. "Did you see me trip her up?"

"You're a bad, rough kitten," retorted Nan, kneeling down beside the girl with the big hat. "What's the matter?"

"I can't find them," wept the girl. "They won't come home. They've been away all night and I've hunted everywhere, and called and called for them. There are 12 altogether, just the nicest sheep you ever saw. And I always took such good care of them."

"Where did they go?"

"How do I know? They were all of them playing over on the hillside, and when I came back they were gone."

"Where did you come back from?" asked the Black Kitten, wisely. "It's your own fault. You didn't watch them."

"I did, too."

"No you didn't; 'cause I watched you. You ran down the hill to look in the brook to see if your hat was on straight, and then you made clover chains and tied them around your hat, and you danced every single chance you got."

"Did you do all those things and for-

get to watch your sheep, Bo Peep?" asked Nan.

Bo Peep sobbed wretchedly. "I didn't think they'd run away," she said. "They've always been such lovely, gentle sheep—just the whitest, curliest sheep you ever saw—"

"Well, they won't be white any more," said the Black Kitten, comfortably. "All sheep who run away never come back white."

"Why not?" asked both Nan and Bo Peep.

"Night time," answered the kitten mysteriously, "turns them black as jet."

Bo Peep started to cry harder than ever, but all at once over the brow of the hill came the line of 12 sheep. They looked altogether too gay and frolicsome for sheep that had run away, Nan thought. First one peeked over the hilltop and baa-a-ed; then another one did the same thing, and finally all 12 came dancing and side-stepping all the way down the path as if they thought they had done something very clever.

But the kitten was perfectly right. They were all black now.

Oh, you mean things, you!" cried Bo Peep, crossly. "Where have you been?"

"Been to see the little boy that lives in the lane," said the head sheep, pleasantly. "And he's going to buy all our wool."

"I don't know any little boy in the lane," answered Bo Peep. Then all the sheep began to dance and sing quite sweetly:

"Baa, baa, black sheep, have you any wool?"

Yes, sir; yes, sir; three bags full.

One for my master,

One for my dame,

And one for the little boy that lives in the lane."

"What's his name?" asked Nan, inquisitively. "And where's the lane?"

Then the sheep all stood in line and hung their heads and looked sheepish and silly.

"I bet I know who he is," said the Black Kitten. "Bet it's that little Johnny Green that threw pussy in the well. He's the awfulest boy."

"We won't tell his name. We promised we wouldn't," said the sheep. "But he likes black wool the best, and it's getting scarcer all the time."

"What made you turn all black like that?" cried poor little Bo Peep, ready to cry again at seeing her pets in such a plight. "You are black as night."

"That's just it," said all the sheep eagerly. "We are night-time sheep now. First, we ran over the top of the hill to the sunset land; then before we could get back home, we got lost in the night and we couldn't see our way home. And all the clouds were black, and we got all black, too, from coming through them."

"Well, now listen to me," said the Black Kitten. "I'll tell you just what I'd do if I were you. I'd go straight back and get lost over again in the daytime, and see if the day clouds wouldn't make you nice and white again."

"We like to be black sheep," said the sheep doubtfully. "It's different."

"I don't care what you want!" said Bo Peep, crossly, stamping her foot at them. "You go right straight back and get washed in the daytime clouds."

Then all the black sheep turned and scampered back over the top of the hill, and Nan noticed that they all had blue ribbons around their necks and each one wore a little silver bell on the ribbon.

"I think that if they stay black sheep that pink ribbon would be more becoming," she said to Bo Peep; but Bo Peep was running after her sheep and the Black Kitten started after her. When Nan caught up with the kitten it was standing still on the top of the hill with all its hair standing on end in horror.

"Mercy sakes alive," it cried. "Did you see that girl, Bo Peep? She jumped right off the top of the hill into those clouds. Listen!"

Far away they caught the tinkle of the silver bells and the sheep singing:

"Baa, baa, black sheep, have you any wool?"

"I wonder what the little boy's name is that lives in the lane?" said Nan, wistfully, on the way back home. But the kitten refused to answer. It didn't like boys, anyway, and

it sat up on the window seat by the geraniums, watching until it was quite dark, with Nan, for the black sheep to come back over the top of the hill; but they never came. — Florida Times-Union.

**HOUSEHOLD QUERIES**

**Canning Veal**  
Is it profitable for a rancher having a veal calf to butcher it and can the meat for his own use? If so, please give receipt for preparing and canning. —Subscriber, San Fernando.

For the benefit of this inquirer and others who are interested in the same question we repeat method of canning given by Mrs. W. E. Borden of Ocean-side in the Cultivator of April 28. She writes:

"We butchered a six months old calf. This age we preferred because it is cheaper than regular veal and not so rich. Also there is more meat to can. The hide will bring a good price at present also. We first roasted a large portion of the meat, then sliced and packed it in jars, covered with gravy and sealed. Second, we cut strips about an inch square of all the suitable meat left and placed it in a strong salt water over night. Next morning we hung it on the line in the open air, if sunny, or over the kitchen stove. Cover with cheese cloth to keep off flies and dust. It will take from two to four weeks to dry thoroughly. It should then be placed in an unwashed flour sack to prevent mold. This is what the Mexicans call jerky, and there is no meat any sweeter than roasted jerky. Third, all bones and meat left were boiled in a fireless cooker with onion and salt. When done some of the meat was packed in jars and covered with stock. The rest we ground up and made into mince meat by adding salt and pepper to taste. This was also packed in jars, covered with stock and sealed. The surplus stock was also packed in jars and sealed to be used for soups and gravies. All of this meat and stock I canned in Economy jars as they are self sealing and the only jar I have had absolute satisfaction with in canning meats. After the jars are prepared as above I place them in a false bottomed boiler (wash boiler will hold 14 or 15 jars) with water to necks of jars and boil three hours. This insures their keeping."

Surely there was nothing wasted from that calf. We are glad to be able to repeat this helpful article and hope it may be found useful by many of our readers.

**WHALE MEAT NOW**

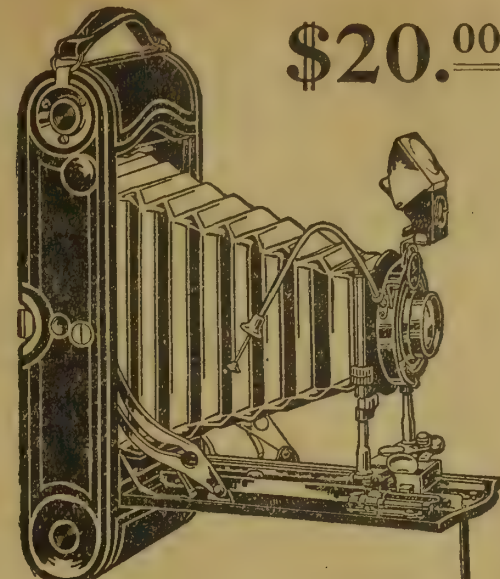

Whale meat has become a popular delicacy on railroad diners, according to a report made at the recent convention of railroad commissary superintendents at Chicago. How this new food product may be made particularly palatable is shown by this recipe invented by Otto Schiffner, steward on a Southern Pacific diner: "Cut the whale meat and pound it well. "Roll in bread crumbs and fry in fat. Season to taste." Dining car patrons proclaim the new dish delicious.

**HOW TO GET FIVE GOOD BOOKS**

You can own five of the best books on agriculture, gardening, poultry raising and dairying under our new plan without spending a cent of your money. This is one of the best and most liberal book offers ever made. Ranchers, students of courses in agriculture and stock raising, poultrymen and dairymen who like useful books are here offered an unusual opportunity to obtain them. In answering this request you do not obligate yourself to buy anything or do anything. Simply send your name and address to Manager Book Department, California Cultivator, 115-117 North Broadway, Los Angeles, saying "send me your five book offer" and we will write and tell you all about it. If you like the plan, then you can go ahead. If not, no harm will be done, but we make it very easy for you to get five fine interesting books.

**TO POACH EGGS**

If you want perfectly poached eggs, stir a teaspoon of vinegar into the water in which they are to be cooked. Cook in deep water, if you want the yolks to be covered with the whites; in shallow, if you want them to spread out and be uncovered.

**\$20.00**

**No. 3<sup>A</sup> Autographic KODAK**

Here is the camera that introduced pictures of the postcard (3 1/4 x 5 1/2) size, and made them popular. Not just the same camera either, because things don't stand still in the Kodak factories, but go on getting better and better every year.

A third of a century of reputation for doing things right in photography stands behind the Kodak line, and for over a dozen years the "Three A" has stood for common sense efficiency in hand cameras.

It makes pictures of the largest size that are practical for a pocket camera. The instrument itself is constructed mainly of aluminum, with fine, seal grain leather covering. It is fitted with Kodak Ball Bearing Shutter with instantaneous speeds of 1/25, 1/50 and 1/100 of a second, and, of course, the "time and bulb" actions; has brilliant, reversible finder, two tripod sockets, and rising and sliding front. The regular equipment includes a Rapid Rectilinear lens of 6 3/4 inches focus, having the greatest speed and finest quality obtainable, outside of the highly corrected anastigmats. The present 3A has the exclusive Kodak autographic feature, which means that you can, in a few seconds, write the date and title on the negative *at the time you make it*—before you forget—as you are likely to do if you wait until your films are developed.

The owner of a No. 3A Kodak is prepared for the making of good pictures, conveniently, has the knowledge that his equipment is right; that it is simple to operate, yet has the scope and quality for making photographs of the highest class. It's a common sense camera, neither too complicated for the beginner nor lacking in anything required for high grade work.

*Kodak catalog free at your dealer's or by mail.*

## HAY

Under date of Oct. 27, Scott, Magner &  
 Miller says:

Receipts past week 1740 tons, the  
 greater part of these for government  
 purposes. General market extremely  
 short. The railroads hold out no hope of  
 the car situation becoming easier for  
 some time to come. With the high prices  
 of hay and short feed on the ranges  
 stockmen are becoming very anxious.  
 Considerable alfalfa arrived and met  
 with ready sale.

We quote today wholesale prices in  
 carload lots as appear from dealers'  
 transfers. For prices to consumers  
 charges of cartage, commission and han-  
 dling must be added according to condi-  
 tions.

## Citrus Fruit Market

Los Angeles, Oct. 31, 1917.

Orange prices cannot exactly be said  
 to be soaring but the market is excep-  
 tionally strong and some very large  
 prices are being received. With the  
 shortage of navels it is presumed every  
 Valencia will command long prices.

Lemons likewise are exceptionally  
 strong and the crop shortage will assure  
 good prices for every lemon to be had for  
 the winter season.

## Shipments

Shipments of oranges from Southern  
 California since November 1, 1916, 40-  
 579 cars, lemons 7733, total 48,312; to  
 same date last year oranges 31,688, lem-  
 ons 6919, total 38,607. From Central Cali-  
 fornia to date this season oranges 5044,  
 lemons 164, total 5208; to same date last  
 season oranges 5398, lemons 146, total  
 5544. From Northern California to date  
 this season oranges 845 cars; to same  
 date last season oranges 610, lemons 1.

A mill in Texas is manufacturing cot-  
 tonseed flour. It is found suitable for  
 mixing with wheat flour and is said to  
 make excellent waffles, pancakes, or a  
 fine mixture with cornmeal in cornbread.  
 The mill is now sending out about 24 tons  
 daily of this flour. It is said to be four  
 times as nourishing as wheat flour.

"Conserve Sugar!" The food adminis-  
 tration wants every ounce which can be  
 saved to send to France which is suffer-  
 ing for want of sugar. The French peo-  
 ple are on a ration of 21 pounds per per-  
 son per year and the English and Italian  
 rations are also less than an ounce a day.  
 Shortage of shipping has caused a co-  
 coconut famine which has greatly reduced  
 the supply of oil and of feeding stuffs.

Winchester Model 12.  
Hammerless Shotgun.

## Why more duck hunters choose this model than any other

If there's ever a place where you need a gun that's a hundred per cent reliable, it's when you're down in the damp salt marshes after duck.

Whatever gun you may start with, if you keep on long enough, you will come around to the Winchester No. 12 Repeater. It is the favorite in the long run with old duck shooters.

In the damp salt air of the seashore and swamps this gun never "gums." Under the most severe conditions it is a sure-fire, sure-to-work Repeater. It will not jam, catch, or fail to extract the empty shell. It "feels" right, "comes up" right, and *is* right. It works smoothly in whatever position it is held.

At the distance at which you get most chances at ducks, this gun shoots an effective uniform pattern of great game-getting penetration.

### The pattern that brings down the game

The remarkable game-getting pattern of the Winchester Model 12 (or the Model 97 for those who prefer a hammer gun) shooting its own standard ammunition, is the result of infinite care taken in boring the barrel.

The right amount of choke for different loads has been worked out after exhaustive experiment. Result: a pattern that spreads out evenly — neither too scattered nor too bunched — and lands with lots of steam behind it.

Quick feeder, sure ejector.  
Throws empty shell to the side, out of your way.

Even spread, maximum penetration. Winchester shot pattern brings down the game.

### The barrel is the gun

Men who know guns realize that the accuracy and durability of a gun lie in the barrel. On the quality of the barrel depends the quality of the gun. There is absolutely no difference in the standard of quality of the barrel on the highest and lowest priced Winchester guns. With Winchester the barrel is the gun and the single standard of quality has been attained only by the most unremitting attention to the boring, finishing and testing of the barrel.

### The Winchester barrel

The barrel of the Winchester Model 12 has been bored to micrometer measurements for the pattern it is meant to make. The degree of choke exactly offsets the tendency of the shot to spread. Until its pattern proves up to Winchester standard, the gun cannot leave the factory. The Nickel Steel construction preserves the original accuracy forever. The Bennett Process, used exclusively by Winchester, gives the Winchester barrel a distinctive blue finish that, with proper care, will last a lifetime.

For those who prefer a hammer action shotgun, we have made the Model 97. It is built on similar lines to the Model 12, but with hammer action.

What  means

This mark on the barrel means *Viewed and Proved Winchester*. This stamp stands for Winchester's guarantee of quality, with fifty years of the best gun-making reputation behind it.

Every gun that bears the name "Winchester" and that is marked with the Winchester Viewed and Proved stamp has been fired many times for smooth action and accuracy, and has been fired with excess loads for strength.

At every stage of Winchester manufacture, machine production is supplemented by human craftsmanship. It is a *test and adjustment process*.

It is this care in manufacturing that has produced in the Model 12 and Model 97 guns of unsurpassed game-getting qualities that have won the name of "The Perfect Repeaters" among duck hunters.

### Write for details of Winchester shotguns, rifles and ammunition

The Winchester catalog is an encyclopedia on shotguns, rifles and ammunition. Every hunter should have one. It gives detailed specifications of the Model 12 and Model 97, and describes at length the principles on which every one of the world famous Winchester shotguns and rifles is built. Write today. We will mail you a copy free, postpaid.

## The Cheap Silo to Build, Fill and Feed From

M. E. Bemis of Arizona Writes of Building Silos with Fresno Scrapers. This Pit or Underground Silo Has Proven Economical and Satisfactory and Costs per Ton Capacity Only 33 Cents

**F**OR the man with little money and some time, an underground silo offers some inducements which should appeal to the farmer who cannot for one reason or another build a permanent above ground structure. The silo described below was made by Mr. Ralph Murphy, near Phoenix, Arizona, and has been used successfully for several years.

Unlike most underground silos this is not round or square, but is merely long and comparatively shallow trench. The length is about 100 feet, width 20 feet and the excavation is 4 feet in depth.

The work of excavating was practically all done with teams and "fresno" scrapers. The earth from the excavation was thrown around the edges, forming an embankment about four feet high. This embankment serves as a protection from water and to some extent probably from gophers. The trench lies north and south, the north end slopes from the bottom of the trench to the surface, necessarily a rather steep grade, but not more steep than many hills and on the roads in our hill country.

In using the silage from this trench the team is backed down the inside and the silage taken from the bottom of the trench rather than the top. In filling, the cut forage is dropped near the middle of the trench, and a team of mules, hitched to the little scraper shown in the picture, travels back and forth all the time the silo is being filled. The scraper drags and scatters the silage and the mules kick it, so that by the time the silo is full, which has of course taken a matter of at least a week or ten days, there is no further settling.

The silage is covered with old hay, straw, etc., to protect it from the air as much as possible. There being in this silo of this kind an unusual amount of surface exposed it is necessary to protect the top more thoroughly than in a deep silo.

So far this silo has given most excellent satisfaction. It will hold very close to 600 tons and cost to excavate about \$200, making the cost per ton capacity about 33 cents. In an investigation recently conducted by A. L. Schall, county agricultural agent of Pima County, he found that the cost of a considerable number of underground silos ranged from 30 cents per ton capacity to over \$4. As the figure did not include accurate labor costs it may be safely assumed that the cost of this trench silo per ton capacity is about as low as any which can be made. The cost of filling is also much less than the cost of filling an above ground silo, and the cost of taking the silage from the trench silo is but little if any more than from an above ground silo and much less than from the ordinary underground silo where a windlass is necessary.

### \$15 Hogs

In order to give a correct understanding of the attitude of the government in the matter of prices of hogs we quote entire a telegram just received from C. W. Holman of the food administration:

"Joseph P. Cotton, chief of the United States food administration meat division, today issued the following statement relative to the prices of hogs: The main purposes of the food administration as to hogs are four; to see that the producer at all times can count on a fair price for his hogs so that it will be profitable to him, to see that the farmer increases the number of hogs bred, to limit the profit of the packer and the middleman and to eliminate speculation.

"All these purposes are necessary because we must have more hogs, so that the ultimate consumer shall at all times get an adequate supply of hogs at the lowest feasible price.

"We shall establish rigid control of the packer. Fair prices to the farmer for his hogs, we believe, will be brought about by the full control which the food administration has over the buying of the Allies, our army and navy, the Red Cross, the Belgian Relief and the Neutrals, which together constitute a considerable factor in the market.

"The first step is to stop the sudden break in prices paid for hogs at the central markets. Those prices must become stable so that the farmer knows where he stands and will feel justified in increasing hogs for next winter. The prices so far as we can affect them will not go below a minimum of about \$15.50 per hundredweight for the average of the packers' droves on the Chicago market until further notice. We have had and shall have, the advice of a board composed of practical hog growers and experts. The board advises that the best yardstick to measure the cost of production of the hog is the cost of corn. That board further advises that the ratio of corn price to hog price on the average over a series of years has been about 12 to one (or a little less). In the past when the ratio has gone lower than 12 to one, the stock of hogs in the country has decreased. When it was higher than 12 the hogs have increased. That board has given its judgment that to bring the stock of hogs back to normal under present conditions the ratio should be about 13. Therefore, as to the hogs farrowed next spring: We will try to stabilize the price so that the farmer can count on getting from each 100 pounds of hog ready for market, 13 times the average cost per bushel of the corn fed into the hogs.

"Let there be no misunderstanding of this statement; it is not a guarantee backed by money; it is not a promise by the packers; it is a statement of the intention and policy of the food administration which means to do justice to the farmer."

This silo is filled with silage from corn and sorghum grown together. In planting a field a two row planter is used. One hopper is filled with corn and one with sorghum. In planting back and forth across the field this method brings two rows of corn and two of sorghum together. The result is a heavy growth, estimated to be from 14 to 20 tons per acre, of splendid silage.

Usually a makeshift, whether it is a building or an implement, is not good business, but in this crisis when it is of so much importance that all feed be conserved, makeshifts may not only be excusable under certain circumstances but highly commendable as well.

There are, of course, several reasons why everyone can't and won't

build silos this year. All the silo building companies in the United States, if they were working night and day, couldn't build enough to take care of the corn stover that will be grown this year. There are not enough laborers to build the silos needed, and a great number of farmers who would be glad to build silos haven't the capital and still a considerable number are tenant farmers and cannot afford to build silos on some other man's farm.

Government experts tell us that the acreage in corn this year will exceed the acreage of last season by more than 16,000,000 acres, and we are all congratulating ourselves that the crop prospects are now for more than half a billion bushels more than last year, or approximately the same as the banner corn year 1912, but what is going to become of all the fodder that will be produced on these 16,000,000 acres?

Our corn crop is the biggest crop that we grow—121,045,000 acres is some acreage, and just as a comparison the hay crop of the country is only 68,717,000 acres, just a little over half as much as the corn crop. The wheat crop is 46,692,000 and the cotton crop 34,600,000 acres, so that the increased acreage of corn is almost one-fourth as much as the entire acreage in hay and more than one-third the acreage in wheat.

What is going to happen to the fodder that grows on this 16,000,000 acres and a considerable portion of the fodder that grows on the balance of the 121,045,000 acres? If each acre produces an average of eight tons the total would be 128,091,000 tons on the increased acreage alone. The logical and the practical way to handle this fodder is, of course, through the silo, and practical farmers who have tried feeding cured fodder or feeding the stalks in the field and then have tried putting the fodder in a silo and feeding silage will agree that the estimates of one-third loss of feeding value is none too much. In other words, the silo will save in actual feeding value at least 42,876,000 tons of perfectly good silage which if fed in the dry form will be lost.

This corn fodder from the increased acreage of corn, if put into silos, would feed 6,000,000 dairy cows for a year. Now why shouldn't everybody get busy and build silos?

Every farmer should be casting over accounts of farm transactions, that is, as to receipts and expenses since January 1, 1917 and should be able on December 31 to make full and complete return as to net income. The only way to secure justice and to render just return to the government is a set of accurate accounts. The California Farm Record and Account Book will be an excellent aid in this matter. The circulation department offers special inducements to any who would like to send the paper to a neighbor or friend and secure this book with only slight cost.

An Arizona Silo

The cheapest of all silos to build. Not so picturesque as the ordinary silo, but economical and a satisfactory type in right soil conditions. Thousands of tons of beet pulp have been ensiled in California by this method.

# Nilson

## Light Weight Tractors

**TRACTION BY PULL  
INSTEAD OF BY WEIGHT**

**A** heavy tractor mires and packs the ground.

Traction obtained by pull instead of by weight allows a light weight tractor to carry a heavy load in soft ground.

Traction by pull is exclusive with the Nilson Patented Lever Hitch. This hitch carries the line of pull up over the drive wheels and then down to the plows. The harder the plows pull back and the engine pulls forward, the more traction force there is on the drive wheels and the harder they grip the ground.

R. V. Stockton of Sheridan, Oregon, writes: "I have attained a depth of 10 inches with 4-14 inch plows on both stubble and sod with my Nilson. I have plowed on very wet lands and immediately gone on the fresh plowed ground with a 9 foot tandem disc with perfect success and without packing the soil."

## Burns Distillate

The Nilson burns either distillate or gasoline. Because of its light weight, the Nilson burns only a small amount of any fuel for the big pull it delivers.

The Nilson is backed by four years service under all conditions. It is of standardized manufacture and design, including the famous Waukesha Motor, Hyatt Roller Bearings, Perfix or Modine Radiator, K-W High Tension Magneto with impulse starter, Kingston Carburetor with Bennett Air Cleaner.

The Wheeled Tractor that has successfully mastered Pacific Coast conditions.

## It Pays to Fertilize

Written for California Cultivator

**A**S TO the advisability of using fertilizer at present prices there is difference of opinion, but we feel that if the producer would at the same time consider prices of the product he has to sell he could figure most satisfactory war profit, producing more with the same labor, the same water and the same overhead expense by slight investment in good fertilizers. Before fertilizer prices were so high, in fact, before the war, there appeared in World's Work report of some of the demonstrations conducted by James J. Hill of the Great Northern Railway. The lessons of Mr. Hill's demonstrations remain. Let us refer to them, with some comments made by a believer in fertilizers.

### Does It Pay?

In one year James J. Hill of the Great Northern Railway demonstrated that he could practically double the yield of wheat, barley and oats, by the use of commercial fertilizers.

These experiments were tried on five-acre plots (and not 100 square feet); 151 plots covering 755 acres in all, scattered along the line of the Great Northern Railway in Minnesota and North Dakota, the most extensive, practical experiment in the use of commercial fertilizer the world has ever seen. Each acre received \$5.39 worth of fertilizer and with the following result:

The average production of fields in Minnesota and North Dakota without fertilizers, as per the United States census report, was: Wheat 15.8 bushels per acre, barley 21.9, oats 31. In Mr. Hill's experimental plots with fertilizers there were produced:

Wheat 30 bushels per acre, an increase of 89.8 per cent; barley 47 bushels, an increase of 114.6 per cent; oats 71 bushels, an increase of 129 per cent.

The grain in each case from the fertilized plots was much superior in quality and brought a higher price. This says nothing about the better condition the land was left in for future crops, and was an experiment of only one year's duration.

It is the experience the world over, that where good commercial fertilizers are used intelligently, that not only are larger yields and of better quality obtained, but the land steadily increases in productivity.

Does it pay? In our opinion Mr. Hill has fully answered the question by practically doubling the yield of wheat, barley and oats on 151 different farms, in one year's experimenting with commercial fertilizers.

Suppose the California sugar beet grower and the bean grower should do as Mr. Hill has done, double their yield at an expense of only \$5.39 per acre?

We note in the above that Mr. Hill's experiments were not reported with test plots under similar conditions. But they are compared with "average" productions of fields in Minnesota and North Dakota without fertilizers. Now then "average" productions of all crops are very low and perhaps these Hill demonstrations might have been under naturally much better conditions. However, there is a lesson in it and while the figures may not be absolute the lesson remains most forceful.

## Curing Olives

**H**ERE is an old olive curing formula given many times in the Cultivator, being first written for our readers by Mrs. Sherman. We repeat it now because many are planning for curing every available olive this year:

"When the meat of an olive slips from the pit when squeezed it is ready to pickle, though we often leave them until they grow black as possible. In handling them for domestic use half barrels are most convenient. Into each 12½ gallons of water put 1½ pounds of Greenbank or Hercules lye and a couple of pounds of salt, filling the barrel three quarters full. Pour the olives into the water rather than risk bruising them by pouring into the empty barrel. This solution is left on until it begins to show in the olive. After twelve hours test the olives by cutting one open, and if a yellow stain reaches almost to the pit the lye is run off and fresh water put on. Put into this water a pound and a half of salt. The water should cover the olives three or four inches. Stir with a wooden stick every two or three hours. Change the brine every other day. After two days taste and if the bitterness is not all out repeat the lye solution. The use of the salt prevents softening of the olives and also fixes the color in a measure. Let the light into the olives when in the brine but avoid the direct rays of the sun. To salt the olive, as soon as the bitterness is out make the next water heavier in salt, say 2½ pounds of salt, and leave it on three days, and then five pounds to 100 pounds of water. A five-gallon can two and a half times filled with water is about 100 pounds, or 12½ gallons of water is close to 100 pounds. In salting the olives if all the salt is put in at once they will pucker up. If this happens put clear water over them for a couple of hours and then make a weaker solution of brine. Olives will keep a reasonable length of time in open vessels if the brine is watched and boiled often enough to keep down bacteria, but it is better to can them either in glass or tin. As olives only need to be sterilized to make them keep it is better to put into jars or cans before heating them. Pick over, rinse in fresh water, make a brine of the same strength they are taken out of. Boil and skim carefully.

When lukewarm cover olives in the jars with it. Stand on boards in the wash boiler. Put water around them half way up. Put on cover and let cook. As soon as the water in the jars has boiled five minutes they can be lifted out and sealed. Have covers well washed and in a pan in the oven so they will go on warm.

Another method recommended in an April issue by Mr. Roeding is: It is not necessary to know just how much salt is used, because all that must be done is to take a barrel, bore a hole about an inch in diameter and close to the bottom, have the other end open, then place a layer of salt a couple of inches thick, then a layer of olives three inches, alternating the salt and olives until the barrel is about three quarters to seven-eighths full. Every two or three days pour from two to three gallons of water over the olives and allow it to run out through the bottom rather slowly. Within a month the olives will begin to shrivel. After this period the olives on top should be placed on the bottom and the salt more or less intermingled through them and pour water over them about every five days. It is very easy to determine when the olives are cured because practically all of the bitterness will be extracted from them. After the bitterness is practically out of the olives, their flavor may be very materially improved by pouring a little olive oil into a vessel of any kind and filling it full of olives. The surface of the fruit will become covered with a thin film of oil. If it is desired to keep the olives for a year or more, a small sprinkling of salt on them is all that is necessary.

During my travels in Asia Minor and in Greece I noticed a number of these olives in barrels. The barrel was usually tilted and there was a small quantity of brine in it. The olives were usually above the brine.

The olives treated in this way are those which the peasant class of Europe use so much when taking their noonday meals in the field.

## The Grapefruit

By A. D. Shamel  
In Address to Fruit Growers

IN one of the first groves of  
Marsh Seedless grapefruit  
trees observed by the writer  
in Southern California it  
was found that out of a total  
of 500 trees 123 habitually produced  
fruits containing from 50 to 100 seeds  
each. In some cases this heavily  
seeded characteristic was found to be  
correlated with a rough, thick rind  
and undesirable shape of fruit. These  
types have since been proven to have  
originated from bud mutations. They  
have been unintentionally propagated  
through the absence of any careful  
system of bud selection based on in-  
dividual tree performance records.  
To illustrate the importance of this  
condition it can be said that the own-  
er of the grove referred to above has  
lost thousands of dollars in the past  
through the unwelcome presence of the  
poor types of trees. Fortunately  
the trees belonging to these poor  
types are light bearers of fruit, as a  
rule, so that the loss resulting from  
the mixture of inferior types of fruits  
has been less than otherwise would  
have been the case.

### Various Types

The important types of Marsh  
Seedless trees and fruits found so far  
in our performance work are as fol-  
lows:

**Standard.** The trees of this type  
produce large and regular crops. The  
fruits have characteristically a slight-  
ly flattened shape. The ripe fruits  
have a very smooth, satin-like skin  
of ivory white color, thin rind, from  
none to ten seeds each, being com-  
mercially seedless. The rag is ten-  
der, having a slightly bitter taste  
which is pleasant and agreeable. The  
fruits have an abundance of juice that  
spurts from the fruits when they are  
cut. The juice possesses the desired  
and typical grapefruit quality, a high-  
ly developed pleasing flavor that is  
only equalled amongst California cit-  
rus fruits, in the opinion of the writer,  
by the fine flavor of the Washington  
Navel orange. This type is worthy of  
a separate varietal name in that it  
has been successfully isolated in Cal-  
ifornia by bud selection and is being  
extensively propagated by California  
citrus growers.

**Seeded.** The trees of this type dif-  
fer but little in appearance or fruit-  
ing behavior from those of the stand-  
ard. The fruits are very similar in  
appearance to the Standard and can  
hardly be sorted out from those by  
even the most experienced workers.  
The fruits are usually heavily seeded,  
averaging about 75 seeds each. Other-  
wise the characteristic quality of  
the fruits is as satisfactory.

**Flattened and Wrinkled.** The trees  
of this type usually have a more up-  
right habit of growth than the Stand-  
ard. The fruits have but few seeds  
but frequently are lacking in juice.  
The juice is likely to lack flavor and  
is of comparatively poor quality. The  
rag is usually rather coarse and bit-  
ter. The wrinkled appearance around  
the stems of the fruits detracts from  
their appearance for commercial pur-  
poses. This type is distinctly inferior  
to the Standard. It occasionally oc-  
curs as limb sports in Standard trees,  
in which case it can be eliminated by  
pruning.

**Corrugated.** The trees of this type  
are similar in appearance to those of  
the Standard. The fruits are usually  
globular in shape. The rind is ribbed  
so as to give a ridged or corrugated  
appearance to the fruit. The color  
of the rind is likely to be yellowish  
green, and it never assumes the high-  
ly desired, clean ivory-white appear-  
ance. The rind is usually thick, the  
rag tough and very bitter, and the  
juice is of inferior quality. This type  
also appears as limb sports in Stand-  
ard type trees, in which case it can  
be removed by pruning.

**Bell-shaped.** The bell-shaped type  
trees are usually dwarfed in appear-  
ance and have a drooping habit of  
growth. The fruits have a character-  
istic bell, or pear-like, shape, resem-  
bling somewhat typical shaddocks.  
The rind is usually very thick and the  
skin possesses a yellowish cast. The  
rag is usually coarse and tough and  
the juice of poor quality. The trees  
of this type are usually light bearers  
as compared with the Standard.

**Rough.** The trees of this type are  
likely to have a dwarfed appearance

## Tree Protectors for Winter Use

### PREVENT Moderate Freezing

Stunters, rabbits, squirrels, barking by sand storm and cultivation.

Easy to put on and cheaper than gunny sacks.

### COLLAPSIBLE PLANTING POTS

Why not raise your early Tomatoes, cabbage, chili and egg plants for home use or for market. Do you know that you can start

Cucumbers, cantaloupes, melons of all kinds in these pots in flats until they have three and four leaves then plant out and all, these melons two or three weeks earlier for market. Just the thing for BACK promoting. Write for samples and prices of both Pots and Protectors. State which you are interested in.

THE EXPAN CO., 935 E. Central Ave., Redlands, Cal.

and produce but light crops except at infrequent intervals. The fruits are usually globular, unattractive, have thick rind, tough rag, and inferior juice.

### Sports

Aside from the types listed above we have occasionally found navel grapefruit sports, fruits having raised or lowered sections, others resembling closely in size, shape, appearance, and somewhat in flavor, typical Valencia or other oranges, and many minor variations of little importance from the commercial standpoint. From the breeding viewpoint these variations, or fluctuations from the Standard and other types, are of interest and possible importance.

In this connection we cannot help but mention the peculiar so-called off-bloom fruits occurring more or less on trees of all grapefruit types. These fruits are frequently misshapen, having thick rinds, and are as a whole of inferior quality, even when ripe. The writer has no suggestion at present to offer as to the causes of this condition or a remedy for it. The number of these off-bloom fruits seems to vary with seasonal conditions.

### Isolation of Standard Type

Enough work has been done to prove that the Standard and valuable type can be isolated in propagation by bud selection based on individual

tree performance records. There is no doubt in the writer's mind but that the Standard type can be further improved by intelligent bud selection, both as regards the quantity and quality of production.

### Eliminating Poor Trees in Orchards

Performance records of individual bearing trees will locate those of inferior types in the established orchards. These trees can be removed or worked successfully, using for the purpose select fruit-bearing budwood from the best trees of the Standard type.

### NATIONAL ORANGE SHOW

The management of the eighth National Orange Show, which is staged to be held in San Bernardino February 20-28, discussed for a time the advisability of holding the show in the face of the serious war situation.

A wire to the president brings the following reply:

"The President would regret to see neglected any instrumentality which has proved serviceable in stimulating business and facilitating its progress. This is not a time for any slowing up of business but a time when every sensible process of stimulation should be used."

Greater energy than ever will now be thrown into the campaign for great citrus show.

## Study Your Vineyard

**P**ROMPTNESS, foresight and concentration on the work in hand are the qualities needed by the grower who has large tracts to look after or whose work takes him and his men over scattered tracts," says William Newman in the Sun-Maid Herald. Mr. Newman has been a resident of the raisin belt for twenty-seven years and has owned vineyards most of the time. He probably will have 125 tons of raisins this year in addition to large amounts of shipping grapes. He is also improving 80 acres, planting partly to raisin grapes.

A watchful eye is needed in raisin growing, as much as in any other business, in his opinion. The successful grower is he who remembers to study his vineyard and plows, waters, prunes and picks when the time is ripe.

"Study the vines and treat each part of the vineyard, or each variety, according to its needs," he said recently. "I found the grapes on one piece small and hard and left it thinking it would ripen very late. I returned in ten days and found the grapes ready to ship. The raisin grapes may turn out the same way this year. They should not be picked until they are ripe."

### Don't Test by Guess

"Every grower should be urged to buy a saccharometer and test his crop. Not only will it keep up the reputation of Sun-Maid raisin quality, but it will insure the grower getting the most for his crop. In our shipping grape picking we have a man

take several tests a day. It is a simple matter, and of course in that business we would not think of taking chances of mistakes without it. Testing by guess misses too often. One had just as well do the thing right."

Apparently Mr. Newman does not worry about the weather, although he lost a considerable amount of raisins last year by rain. The California climate has been almost uniformly favorable to him.

"If one has a great many raisins to pick, probably he would do well to start a degree below the 24 per cent mark," he said. "A little lower might do, although I would not pass on that. I expect to start picking with paper trays, though of course I prefer the wooden trays."

### Duty of Machinery

One of the practices on the Newman ranches is to make the farm machinery do full duty. For instance, one of his two tractors, when not needed for other work, is put to pumping water. He has some plantings of young Thompsons and Gracichons which have made a good showing this year. On another place he has old vines. The Malagas which bring in some cases eight tons of green fruit to the acre. The Muscat crop last year ran a ton and a half to a ton and three-fourths. In pruning he leaves the most wood on the vigorous vines.

The cultivation differs widely in the different places. Some of the subirrigated lands get no surface irrigation, while some of the higher land get two or more wettings.

## Greenhouses

"Greenhouses, Their Construction and Equipment," by W. J. Wright, New York School of Agriculture, published by Orange Judd Company, New York, at \$1.60 net.

This is a 286 page, five and a half by eight, cloth bound book, containing 131 illustrations, printed on fine book paper, with 16 chapters touching upon hotbeds, cold frames, the forcing boxes, gable-roofed sash beds, construction of the green house proper, material to use, framework, glazing, ventilation, heating, boilers, fuels, flues, etc.

### The publishers say:

For a decade and more there has been a decided demand for information about greenhouses. Owners and operators, present and prospective, have been asking for definite, concise information about the different forms

of construction, heating and equipment, and the probable cost. Students and teachers in agriculture schools and colleges have been demanding a suitable text-book which will not only give opinions but facts and figures.

"This volume attempts to meet these demands. It has been several years in preparation. The data given are based on experience and observation of the author as well as on the of hundreds of practical greenhouse builders and owners throughout the country. The tables and estimates are in accord with the best engineering practice. The book is illustrated with many photographs and drawings, which greatly enhance the value of the text."

A Pennsylvania apple grower will call at Thanksgiving time apples stored away in cellar having no cold storage whatever, in October of 1916.

# Questions and Answers

ANSWERS BY EDITOR AND STAFF

## Underground Cement Pipe

I have a pumping plant and use a wooden flume. I want to change to underground cement pipes. Will you kindly tell me how much water I am pumping with a flume 11x12 inches in measure running full, with a fall of five inches to 100 feet. I am using a centrifugal pump. If I put my discharge pipe from the pump into the flume so it cannot get any air will it work without a stand pipe; also what size pipe line will it require to carry the water without loss of power from friction?—Subscriber, San Gabriel.

If the flume is reasonably smooth inside it will carry 150 miners inches of water when running full. This amount of water will require a cement pipe 14 inches in diameter with the flume stated above. It is not necessary at the connection between the discharge pipe and the cement pipe to be airtight. In fact it is preferable to have an open cement box 3 feet wide, four feet long and three feet deep into which the water will discharge from the pump. The first 40 feet of the pipe line, beginning at the box should be 16 inches in diameter. If this is done there will be no need of a stand pipe, and one can al-

ways see whether the pump is working properly. Air vents must be placed at frequent intervals to prevent bursting the pipe when the flow of water is checked by closing valves.—J. B. N.

## Drug Plants

Please advise soil requirements and conditions necessary for the growth of ginger root, licorice, saffron and commercial bluing. Where may one obtain seeds and plants of the above and how are they prepared for commercial use?—Subscriber.

We would recommend before growing such plants that the matter of a market be looked into. The growing should only be under contract with a responsible firm. They are not like staple foods, which find a market at any time. If one finds it possible to develop a market we would recommend writing to W. W. Stockberger, Physiologist in Charge of Drug Plant and Poisonous Plant Investigations, United States Department of Agriculture, Washington, D. C., and ask for Farmers Bulletin 663, "Drug Plants Under Cultivation." There is a national association of manufacturers of medicinal products composed of chemists and druggists from all parts of the United States. Its secretary is Charles M. Woodruff, Detroit, Michigan. We may also mention that we believe the C. C. Morse Seed Company of San Francisco issues a catalog of seeds of medicinal herbs.

## Rust on Beans

I send leaf from Kentucky Wonder bean vine and would like to know what disease is affecting it and if there is a remedy. We were unable to use the beans this spring on account of the trouble.—Subscriber, El Monte.

Prof. C. O. Smith of the pathological laboratory, Riverside, answers: "The specimen shows, as you thought, rust spots. I do not know of any practical method of controlling this disease. At one time Mr. Rogers did considerable work in using various sprays, but they were without effect."

## Corn Rust

What is the trouble with leaves of corn which I am sending? You will note the leaves are covered with small brown insects or spots.—Subscriber, Huntington Park.

Under a strong glass these spots showed plainly that they were of a fungous nature. They were sent to the pathological laboratory of the citrus experiment station at Riverside, and Prof. J. T. Barrett answers: rust, scientifically known as Puccinia sorghi Schw. The leaves particularly are affected, although occasionally considerable damage is done to the development of the tassels. However, it seldom becomes an epidemic and therefore has not received much attention from the standpoint of control or of varietal selection. Some rusts have several stages in their life history. The alternate stage of this rust is probably Accidium oxalidis which occurs on Oxalis cymosa. There is reason to believe that under the mild climatic conditions of our winters the summer, or uredo-spore stage, may live over the winter and start infections the following season. In this case the alternate host would not be necessary for the propagation of the fungus. As a means of control I would suggest that rotation be practiced and that all refuse, such as leaves which may harbor the fungus, be destroyed or removed from the ground."

## Storing Onions

Please advise best method of curing and keeping onions. Several weeks ago I purchased a sack which I placed in a cool, dry place but in a remarkably short time they began to grow and later to decay. Have lost about

## Great Little Tractor

### For Orchards and Vineyards

Built by Long-Established Concern

Here is the tractor that the owners of orchards and vineyards have wanted to buy for years. It is built by the Bean Spray Pump Co., makers of the famous Bean Sprayers and Pumps. It does what no other tractor has ever done before. Its patented front-drive offers exclusive features, which sooner or later you will want in a tractor. Don't buy any tractor until you know all about it. Don't find out about this too late.

### Great Traction With Light Weight

This is the lowest-priced track-laying tractor manufactured. It weighs but 3100 lbs. and costs less to operate than wheel-type tractors of equal power. Note how the track grips the ground, and compare that contact with the wheel-type's.

This means great pulling power with a very light tread. No other can work so well in light soil.

### Handles Better Than Horses

This Tractor is handled more like horses than any other machine in existence. And it does what horses cannot do. It will pass under tree branches only 4 feet off the ground, plowing close up to the trunks. It works between 7-foot rows in vineyards, and cultivates right up to the vines without breaking off young shoots.

You can turn it all the way around inside a 10-foot circle (5-foot radius); and it pulls with its full power on these turns the same as on straight-aways.

When you hit soft spots or holes you simply "gee" or "haw" the track and pull out, as you would with a team.

## BEAN TrackPULL Tractor

### Pays for Itself

The Bean TrackPULL Tractor pays for itself in what it saves its owner. It is simple and strong and durable. Every part is over-strength. The motor is an automobile type, so you know how to care for it. The Tractor is rated at 6 h. p. at drawbar, and 10 h. p. at the belt. On account of the patent front drive principle and simple transmission the fuel consumption is far less than other types doing the same amount of work.

### Get Catalogue Today

Send the coupon now for our new catalogue. Price now \$1150, if delivered before November 30th. Price after November 22nd, regardless of delivery, will be \$1,215, a necessary increase due to increased cost of materials. Act now and save \$65.

## For Sale LIVE and ALMOND ORCHARD

One and a Half Miles from Orland in Government Irrigation Project

On account of owner being drafted he has for sale a forty acre orchard, of which twenty acres are planted to olives and twenty acres to almonds, set out in spring of 1915. Trees are in first class condition, no better in the country. There is also on the place a new modern cottage, well, with tank, tank-house, engine pump, and tool shed. Will sell as a whole or each twenty acres separately. Invite inquiries and will quote prices on application.

Address R. R. No. 1, Box 158, Orland,

## The Fate of the Unprepared

Among the remarkable events of this war no fact stands out more startlingly than the tragic sacrifice of Russia's unequipped soldiers.

The army has been victimized by intrigue and treachery. Guns were sent to the front without ammunition and ammunition without guns. Supplies were provided that when unpacked proved to be rubbish. Left stranded by communications that broke down under slight pressure the brave Russian troops hurled themselves again and again against foes perfectly prepared.

From the very verge of victory they doggedly fell back fighting with stones and clubs and iron bars, resisting heroically but ineffectively.

No thought can be more abhorrent to Americans than that of our

boys ruthlessly slaughtered because of lack of equipment or support which it is the first business of us at home to supply.

Our Government, never before so powerful, is working prodigiously in the preparation of armies and means of warfare. Throughout the nation there is a unity of purpose that is piling on the altar of liberty every personal ambition and corporate gain.

Mines, factories, farms, shipyards, the counting houses and shops of every industry are laboring day and night to supply the sinews of war.

The Bell System is co-operating to mobilize production, transportation and communication, and is using its every energy to speed up American defense.

## Alfalfa Seed

When you think of Alfalfa Seed you say: "Well, I won't need any until spring; so I will wait until then and buy." Not so fast, Mr. Rancher; maybe you will and maybe you will not.

Times have changed. Seeds, like other staples, have advanced. And this very advance and demand means with a small crop in 1917, that things will buzz later on. Note the big advances on Alfalfa Seed the past month; what will it be later on?

We handle this seed in great quantity, both retail and wholesale. Years of experience have made us the Alfalfa kings of the west. We know what you need, if you will tell us what your soil is. California grown seeds are our hobby, as well as our business, while,

ALFALFA SEED IS OUR SPECIALTY

WRITE, WIRE or PHONE for Samples, Quotations, etc.

V. A. Peterson Alfalfa Seed Co.

Arbuckle, Cal.

half of them. Is there any way of checking such conditions?—Subscriber, Morgan Hill.

The principal factors in keeping onions in storage are coolness, dryness and plenty of ventilation. If they may be spread in crates so that the air can reach all sides so much the better. As soon as the growth appears sort carefully, bruise as little as possible and throw away all diseased or decaying bulbs.

### Tannin from Acorns

Is there any way of extracting the tannin from acorns and curing so as to keep over from one season to the next?—Subscriber, Morgan Hill.

This question we cannot answer, but we think not. We will pass it on to our subscribers for any information they may give to us.

### Alfalfa Molasses

What is alfalfa molasses? — Subscriber, Big Pine.

Alfalfa molasses is a combination of cheap or pulverized alfalfa meal with waste materials from the sugar factories. The demand for sweets during the last few months has been so great that this waste product has advanced in price until now it is rather beyond economic bounds for feeding.

### Grapefruit

I want to set out a grapefruit tree for home use. What variety would be best?—Subscriber, Long Beach.

The Marsh is probably one of the best for California planting, at least it is the principal variety grown in this state and in Arizona.

### Citrus Trees in Lawn

Have orange trees in my lawn, one

six-year-old navel, also another navel and a Valencia set out three years ago. While the trees are thrifty they haven't made a large growth. Have kept the space around them spaded up and about two years ago spaded in well rotted manure. Otherwise the trees have not been fertilized as it is not convenient to get stable manure. Would you recommend the use of commercial fertilizer and when and how should it be applied and in what quantity? Also have a six-year-old Eureka lemon tree in the garden which hasn't done as well this year as usual. The ground around it has been cultivated and potatoes and small garden truck grown. This tree also was fertilized with chicken manure.—Subscriber.

Any complete commercial fertilizer will doubtless answer your purpose but we question whether any fertilizer will be sufficient to accomplish best results. No citrus tree does well in lawn. A lawn must be kept too wet to suit the roots of the ordinary citrus tree. Where a tree is to be set in the lawn it should always be on the sour stock root. Then as much space about it as possible should be kept spaded. It should be irrigated heavily but only a few times during the season. A warm, light porous soil with plenty of air in it, is one of the requirements of the citrus tree. One of the requirements of a blue grass lawn is moisture at all times, hence the two do not work together to best advantage. This is to be regretted for the citrus tree is one of the most beautiful with which to ornament a lawn. It becomes most unsightly, however, when it yellows and fails to do well. As to lemon tree in garden presumably the same condition obtains, that is, the small truck garden and potato crop calls for more moisture than needed by the lemon tree.

## November Vegetable Planting Calendar for Southern California

Written for California Cultivator By D. F. Reichard

**T**HE rains holding off so long gives ample opportunity to get all summer crops cleaned up, the trees and shrubs pruned and the refuse burned. This cleaning up each fall goes a long way toward controlling insect and fungus attacks the following year. Any plants that are badly infected, if easily replaced, should be pulled up by the roots and burned; but if they are permanent plants prune back as much as possible and spray thoroughly with resin wash for scale or insects and Bordeaux Mixture if infected with any form of fungus.

Dig and put away sweet potatoes, string the ripe chili peppers, and dry them, take in the squashes and pumpkins carefully so that they are not bruised. They will keep well into spring if handled properly, using bruised and scratched ones first.

On all vacated ground spread a liberal coating of manure to be leached into the soil with the rains. If the rains are too slow coming irrigation or sprinkling will have to be resorted to. However the moisture is obtained there should be enough to soak down at least two feet. The ground should be worked to a depth of not less than one foot so that it will be

in a condition to take in all the moisture that may come to it during the winter.

Cultivate shortly after each fall storm so that the surface will be thoroughly broken up, thus making a mulch to hold the moisture in the ground.

Plants from seeds sown at this time do not develop as rapidly as during the warmer months. Plant now for early spring harvest Egyptian beans, carrots, turnips, radishes, early winter varieties, Wonderful lettuce, prickly spinach, onion seeds or sets, cabbage and cauliflower plants to winter or the seed for spring, salad and dwarf peas.

Jerusalem artichoke, horseradish, asparagus and rhubarb roots may be set from this time until early spring. In frostless sections potatoes may be planted during this month for early spring potatoes. Seed of egg plant, peppers and tomatoes are started in hot beds or hot houses for young plants to be set in early spring.

All stuff planted during the last few months will need irrigating as long as the rains hold off, and we should watch the young plants that they do not want for moisture.

## Slick Up in November

Written for California Cultivator

**T**HIS is a delightful month for slicking up around the place. Gather up old stalks and weeds for the compost heap, rake up the leaves and throw on a little dirt and scrapings from the corrals, keep thoroughly wet and open at the top so the rains may penetrate. This will make wonderfully fine bedding soil a year later, also an excellent soil for filling in around new shrubs or trees. Besides it adds to the beauty of all the place to get this rubbish out of the way, lessens the fire danger and gets the soil in condition for later spading.

Nor is this simply a month of cleaning up, for one may plant now seeds of snapdragon, clarkia, candytuft and millions of California poppies, Shirley

poppies, stocks, larkspur, marigolds, in fact, a hundred other similar hard annuals. And don't forget the row of sweet peas along the unsightly fence. These are worthy of deep spading, thorough fertilization and best preparation of the soil.

In bulbs plant all the spring bloomers, especially iris, the poor man's orchid. Besides, plant anemones, freesias, dwarf types of gladiolus, hyacinths, daffodils, jonquills and tulips.

Later in the month cuttings of herbaceous plants may be made. To get best results these should be rooted in sharp sand with perfect drainage.

If the lawn has become overgrown with Bermuda a good raking, with fertilizer, will help to keep it green during the cold months.

### CONCERNING SUGAR

In 1915 Truman G. Palmer sent out the first bound volume of "Concerning Sugar." It contained in tables, illustrations and text the most complete information to be secured. Since then additional statistics and information in the form of loose sheets for binding in the volume have been mailed from time to time. The latest addition to this book has just been received. It is a series of questions and answers concerning sugar, putting in readable form a fund of material. For instance, one of the simpler questions:

"What are the main processes employed in manufacturing beet sugar?"  
 "The process of making sugar from beets is a continuous one from the time the beets are floated into one end of the factory until the granulated white sugar, ready for the table, comes out at the other, sacked or barreled, ready for shipment. From the time the beets are topped in the field until the package of sugar is opened by dealer or consumer, neither the raw material nor the finished product is touched by hand. The sugar, together with various impurities, is stored in liquid form in the minute cells of the beet, and after removal of the sugar from the solids of the root it must be separated from the liquid impurities which come out with it.

"After the beets are floated into the factory they pass through an automatic washer and then are cut into cossettes or slices, consisting of long slender pieces resembling shoe-string potatoes. The cossettes then are run into a diffusion battery consisting of eight to 12 cells, each holding from two to six tons, where the juice of the beet is leached out by running hot water over the cossettes, the only further use of which is for cattle food. This refuse is known as 'beet pulp.' The 'mother liquid,' as the juice from the cossettes with the admixture of water is called, then is subjected to numerous boilings, filtrations and clarification in order to evaporate the water and eliminate the impurities, after which it is boiled until it forms into crystals, when the thick, hot mass is run into centrifugal machines which throw off the molasses and leave the pure white sugar. The sugar then is conveyed to a granulator, where it is sifted and dried, after which it is sacked, ready for shipment and direct consumption. Prior to 1864, when de Dombasle's invention of the diffusion battery was installed in a factory in Austria, beets were held against a revolving rasp which reduced them to a pulp from which the juice was extracted by hydraulic pressure."

### DRAWBAR HORSE POWER

Answering a question which recently came to the Cultivator Prof. J. B. Davidson of the agricultural engineering department of the university farm at Davis writes: "In reference to drawbar and brake horsepower and fuel consumption of tractors it is rather difficult to answer briefly because it is necessary to discuss somewhat conditions for which the estimates are given. Under usual conditions it may be expected that the drawbar horsepower of a tractor will be about one-half the brake horsepower. In soft ground, as in the case of subsequent tillage operations after plowing, the drawbar horsepower may be reduced to as little as one-third, while on good firm footing the drawbar horsepower may be as much as 60 per cent of the brake horsepower. The kind of tractor will have something also to do with the drawbar efficiency. The average tractor will use about one-eighth of a gallon of fuel per brake horsepower hour. This would of course mean twice the consumption for a drawbar horsepower."

### AN APT COMPARISON

"The farmer who lets his machinery rust and rot and be scattered about all over the place is no better than the soldier who lets his rifle barrel get choked with mud and has lost his bayonet," is one of John Field's apt statements in an Oklahoma Farmer editorial urging farmers to put their implements in good repair at once and keep them so until used again. "Farmers are soldiers of the soil now," he continues, "and they cannot afford to neglect their equipment any more than the soldiers of the trenches can."

Founded 1842

# CASE

Famous the World Over

## Values Impossible Elsewhere

Because Case has been building Steam Engines for over forty years, because its plant covers 140 acres and employs over 4000 skilled mechanics—because of all of this experience and these manufacturing facilities, it is possible for Case to include values in Case Steam Tractors that would be impossible for a lesser organization.

You profit because of these reasons and because of quantity production. You get the best possible Steam Tractor at a reasonable price. You are assured of satisfaction for years to come.

The Case line of Steam Tractors is complete—8 sizes. We have not neglected the development of our Steam Tractors because of the popularity of our Kerosene Tractors. In some parts of the country and for certain uses, men prefer steamers to gas engines.

A pictured description, with specifications, of the complete line of Case Steam Tractors, will be mailed free upon request. Write for your copy today, or for any other information as outlined below. It is all free.

## OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

## THIS WEEK'S COVER?

Why "grape"fruit? is a question often asked as to the luscious pomelo. Answer is given on the cover this week. The cluster of fruit, eight at least in full view, is not entirely unlike a cluster of grapes, and when it is considered that each one of these fruits is the size of a man's two fists, it is seen that the tree bears some weight when it brings forth many such clusters.

This cluster was grown in Arizona, which state is proving a producer of remarkably fine pomelos. The branch has been stripped of many of its leaves to give full view of the cluster. This photograph was used by courtesy of the Chamber of Commerce of Phoenix.

## TRANSPORTATION

One of the greatest problems confronting the generals in the field is that of transporting foods, munitions and troops and having all where needed, when needed. That problem is not only with the front line trenches but in the most remote regions of the world. In India, Australia and Russia wheat is rotting because of lack of transportation. In the United States we are denying ourselves that our wheat may be sent to those who must have it in order to fight and labor efficiently. Every American shipper is straining every point to load and unload as rapidly as possible. But much of the advantage of our nearness to the fighting forces is lost because of lack of transportation. Tractors and trucks are entering into the solving of the transportation problem in a large way. To make their aid as great as possible our highway construction is being pushed to the limit.

## G. W. HOSFORD

The Cultivator has recently referred to the passing of pioneers in the fruit industry. Now we must refer to the passing of a comparatively young man, taken from most active and patriotic work in encouraging greater production of food, G. W. Hosford, for many years manager of the lemon packing house at San Dimas in Los Angeles County, and more recently field man, passing from orchard to orchard and packing house to packing house, encouraging more and better work in production and in packing. Before taking up this work he was connected with the United States department of agriculture. Mr. Hosford died at the age of 38 years at his home in San Dimas last Sunday. In his passing the lemon industry suffers a great loss.

## ORDER EARLY

Months ago the Cultivator gave warning, because of steel and labor shortage, that implements and tractors, machinery and tools of all kinds would not only be higher in price, but hard to secure. The farmer has found this to be true. The wise ones who are planning a greater season's production next year are already placing their orders. It is nearly a year till bean threshing time again, but doubtless as advantageous figures can be secured today as nine months from today, so immediate orders should be placed. It is to be hoped that the food commission will aid manufacturers in securing sufficient steel and supplies to fill orders of the farmers for equipment they actually need.

Also order next season's supply of seeds, fertilizers, in fact, everything needed.

## PRICE FIXING

The wheat grower has at times felt restive under the fixing of prices for wheat, yet many other growers have felt that even at the advanced labor and other costs wheat may be produced at a good profit at the prices fixed. In any case, the wheat grower can live and be patriotic at such prices.

But the wheat grower is not the only one who has freedom of action under limited control by the government. Prices have been fixed on copper, steel, coal, coke and pig iron. It is announced that this control is for three purposes: first, to enable the public and the government to purchase at fair prices; second, to secure distribution on basis of the country's requirements; third, to prevent the making of large profits and eliminate causes of labor discontent. Presumably many other products will be brought under government price control. See on third page of this issue reference to a movement which aims to control prices of hogs.

The best of it is the greater portion of the people are uniting heartily in support of the government.

## FEAST DAY OR FAST DAY?

There is much speculation as to what President Wilson's Thanksgiving proclamation will contain, whether he will proclaim a Feast Day or a Fast Day. Of course, the Cultivator or any member of its staff would not think for a minute of offering any suggestion to anyone so wise and so capable of conducting the affairs of this country as our worthy president, yet feel that if he should ask for an Annual Fast Day it would meet with hearty approval. The Cultivator believes it

so strongly that the force have agreed among themselves to take the extra amount that they would spend for Thanksgiving dinners and donate it to the Red Cross, the Y. M. C. A., or the K. of C. The Cultivator will also undertake to forward any donation which any one of our subscribers or readers will send to this office, provided there is not one of these organizations in your immediate neighborhood, therefore if this idea meets with your approval and you wish to send us money and ask us to forward it to one of the above organizations, we will gladly do so, sending you a receipt from such organization.

We believe there is no way that we could show our patriotism better than by making this sacrifice, especially on this Thanksgiving.

Of course there is no way of knowing how much the average family would spend, but we would say, taking the nation over, it would run from five to ten dollars. Think what this amount would mean if it was donated to the organizations mentioned above which are doing such splendid work, and how much it would mean to our boys who are in the camps or somewhere in France!

## SPICE IN VARIETY

Variety is the spice of life, and in consideration of the highly spiced, rich Thanksgiving dinners which probably every reader of the Cultivator has enjoyed for many years, may we not use the variety in spicing our Thanksgiving dinner in 1917? We are now conserving at every possible point. Why may we not this year devote of our comfort, or at least of our luxuries, to those who are giving their comfort—possibly their lives—to our country? Instead of roast pork, highly spiced mince pies and other rich dishes of the usual feast, let us reduce this year and let the spice come from the variety, giving the cost for these extras to our soldiers.

## WAR TAXES

Most important of the war taxes, at least so far as Cultivator readers are concerned, is the income tax. While not immediately effective reports have to be made between December 31 and March 1. But that report must cover the 12 months from January 1 to December 31, 1917. The present concern of the farmer is as to the making up of his report for the year. Details will be given in another issue.

## Taxes Effective Now

War taxes on facilities of public utilities became effective November 1. Passenger tickets for transportation by rail or water or any form of motor power on regularly established lines, eight per cent. Commutation tickets for trips less than 30 miles or tickets for transportation where fare is less than 35 cents, no tax.

Sleeping car, parlor car, chair car tickets, ten per cent.

Freight and express shipments, three per cent.

Parcels and packages by express over regular roads, one cent for each 20 cents or fraction thereof.

Transportation of oil by pipe line, five per cent.

Telephone and telegraph messages, when charge is 15 cents or more, five cents.

Life insurance policies, eight cents on each \$100, or fractional part thereof, of amount for which life is insured.

Fire and marine insurance, one cent on each \$1.00 premium. This applies to renewals also. We understand this tax will be paid by the companies carrying the insurance.

Casualty insurance, one cent on each \$1.00 of premium.

## Increased Postage Now Effective

Three cents per ounce or fraction thereof, for letters, excepting drop

letters, which require two cents. Post cards, two cents. Letters mailed by soldiers on duty in foreign lands, no postage.

War excise taxes, next week.

## This Week's War News

The withdrawal of German troops from Russian soil, especially near Riga, for use against Italy has enabled the Russians to recover some of their captured lands.

Herbert Hoover reports the result of food pledge week as a wonderful showing of willingness of American home makers to aid in food conservation. California did her part.

Secretary Lansing reports an agreement between this government and Japan. The United States recognizes that Japan has special interests in China, and Japan agrees that the territorial sovereignty of China remains unimpaired.

The second war chancellor of Germany, Michaelis (Mee-ka-ay-lis), has been dismissed. He is succeeded by a Bavarian, von Hertling, presumably appointed against the wishes of the Prussians in an attempt to hold the rest of Germany in line.

During the past week the war has come closer home and the American people have a fuller realization of the fact that We are at war. American boys have been killed in the trenches in France; others wounded and a dozen or more men captured by the Teutons.

The pressure of English and French troops continues on the west front and gains are reported every day. The British troops under Gen. Haig report the capture of Passchaendale, which indicates that the English have captured the heights and now have only the plains of Flanders before them.

Reports from all the training camps show that the quota of practically every district in the United States has been completed and a mighty American army is being drilled. The patriotic spirit being aroused the country over calls for placing these troops on the European fields as soon as possible.

In 1865 when the copperheads were clamoring for peace Unconditional Surrender Grant said; "We will fight it out on this line if it takes all summer." When peace came it was complete. The secretary of war for the United States says; "This war will end when we win." Lloyd George says; "No road to peace but in victory." It is no time for compromise.

The plunge of the combined forces of the Austrians and Germans into the Austrian territory occupied by the Italian army, and later onto Italian soil, has been a matter of serious concern to the Allies. Guns and reinforcements are being hurried to Italy. Meantime the Teutons have captured the city of Udine (Oo-dee-nay) and crossed the Tagliamento (Tal-ya-men-to) River where it has been hoped Gen. Cadorna could hold out until reinforcements arrived. The Italian troops were taken entirely by surprise almost at the moment they had reason to hope they would have Trieste (Tree-es-tay). The Germans claim to have taken 200,000 of them captive.

## CULTIVATOR CHISEL TEETH

Poor Puss explored the garbage can and muttered, "Dern this Hoover man."

Now! for a long pull, a hard pull and a pull altogether. Pushing is in good form too, but cut out the kicks.

A hog in 1917 is worth two in 1910.

Vegetarianism is having a grand world try-out—and Wm. Hohenzollern did it.

They're not fighting this war—We are.

Meanless day? Huh! Always did like fish.

Wheatless day? Just pass the corn-bread and honey.

# Agricultural News Notes of the Pacific Coast

## Northern California

Did we subscribe for liberty loans?" "Well, Yes."

Solano County hopes for an early lift-out of the anthrax quarantine.

The rice mill at Gridley, Butte County, started up October 19.

Gridley, Butte County, has shipped several carloads of horses to Europe.

Prices of hops are declining. Ores are now reported to be selling between 30 cents.

Butte County laborer has just died from anthrax contracted from diseased cattle.

Gridley hay producer goes to market with his hay on tractor trains, 12 cars to the trainload.

Pomona County is boasting over 100 prize winning apples at the San Francisco Land Show.

The federal farm loan bank at Berkeley has ordered reappraisal of farms in Butte County.

University farm experts advise spraying morning glory at this time of year with arsenic solution.

Solano County stockman has just sold 3000 head of ewes two to five years of age at \$14 per head.

Butte County live stock men are fighting the overflow from rice fields spreading anthrax germs.

The great subsolier recently illustrated in the Cultivator is tearing up the soil in Sacramento County.

Colorado County reports an exceptionally heavy crop of apples. Placer County has shipped 250 cars of fruit.

A forest and field fire in the coast range west of Willows did serious damage and at last reports was still burning.

Butte County's farm bureau campaign is progressing and farmers hope for appointment of an adviser within short time.

There will be more general planting of orchards on the hillsides of Nevada County this coming season than in several years.

Deaths because of fire damage to buildings on the state fair grounds at Colusa are still under way, some estimates claiming \$5000.

Three cattlemen have been arrested by the forest service because of alleged setting of fires in the Stonyford district of the California national forest October 23.

Wool producer of Shasta County is using his goats to produce both wool and milk and has established a successful cheese factory which is handling the milk from 300 goats.

Commissioner Hecke and Sacramento County fruit growers are planning for a great state convention which opens in the city of Sacramento November 21. Horticultural commissioners, however, convene on Monday, November 19th.

Yandotte, Butte County, hopes for early establishment of a great apple producing plant, and millions of berry cuttings will be planted this year to provide the pasture. It is reported that over 1000 acres will be planted.

Sutter County live stock man recently had a valuable Holstein stolen by some miscreant. It was thought at first that this was with intention of introducing anthrax virus, though some of the animals have died. The state veterinarian reports it is not from anthrax.

## Central California

"Over the top with our Liberty loan."

Stockton recently held a chrysanthemum carnival.

Twenty tons of almonds went up in smoke at Lodi last week.

Yosemite stage lines have suspended operations until spring.

Tulare County has made its first direct shipment of eggs to New York City.

The farm bureau at Keyes, Stanislaus County, is discussing drainage problems.

Tulare County estimates its output of oranges will be around 60 per cent of normal.

The Tulare County Poultry Association did \$8000 worth of business in September.

Navel shipping will be much later in the Tulare County section than preceding years.

The Stanislaus Poultry Association is planning for its show at Modesto, December 5-8.

Santa Clara Valley's output of garden and field seeds will be far greater than any preceding year.

Most of the beans are in but some threshing is yet to do. The weather has been most favorable.

The harvest of Manzanillo olives is in full swing and the earlier Missions are beginning to come in.

Oakdale, Stanislaus County, is contemplating the installation of water storage for 100,000 acre feet.

Eight miles of the John Muir trail between Yosemite Valley and Mt. Whitney have been completed.

The annual meeting of the San Joaquin County farm bureau is being held this week Saturday at Stockton.

A demonstration of farm machinery and tractors was made at San Jose last Thursday, Friday and Saturday.

Hanford, Kings County, expects to have construction work on a \$100,000 creamery under way in a short time.

The state veterinarian gives warning that the greatest carriers of anthrax are the large animal-biting flies.

A recent meeting of dairymen at Dinuba, Tulare County, discussed plans for organizing the San Joaquin Valley Dairymen's Association.

The farm bureau of Kern County has placed over 23 tons of squirrel poison in the hands of various members of the farm bureaus.

Madera and other counties are engaging in a sugar beet planting campaign, which means a greater production of sugar than any preceding year.

To encourage the bee industry by enforcing more rigidly the county bee ordinance is one method Tulare County has of increasing the sweet output.

The milling companies at Stockton report more extended use of home grown corn in the manufacture of various table products than in any preceding year.

Practically all the large cooperative organizations of the San Joaquin Valley have become members of the California Federation of Farmers Cooperative Marketing Associations.

Orange growers of Lindsay, Tulare County, held a meeting last Monday and discussed "substantially colored" and what was the intention of California legislators as to the shipping of immature oranges.

## Southern California

"Reached our Maximum on Liberty loan" says almost every community.

Wheat acreage of the Imperial Valley is greatly increased.

Imperial Valley is making a campaign against Johnson grass.

The Festival of Dates called large crowds to Coachella last week.

February 20-28 are the dates of the Orange Show at San Bernardino.

Palo Verde, Imperial Valley, cars of hogs bring the owner around \$1700 in cash.

Many of the farm loan associations of Southern California have joined forces.

Four new pig clubs have just been organized in the Imperial Valley high school.

Coachella Valley pressed dates have been ordered for American soldiers in Europe.

Palo Verde Valley, Riverside County, has just ginned its first bale of long staple.

Late gardens at San Jacinto, Riverside County, were visited by frosts October 20.

Pomona is discussing the securing of a creamery. Two thousand cows are required.

The cotton picking machine plan of harvesting is being renewed in the Imperial Valley.

"The biggest ever" is the report as to the apple show held at Yucaipa, San Bernardino County.

Nearly \$70,000 has recently been advanced Imperial Valley farmers by the federal farm loan bank.

Some poultrymen are finding fault with the business management of the Poultry Producers' Association.

Now comes a stock grower near Colton and reports death of a horse and serious illness of a cow from eating Sudan grass.

Now the turkey growers are getting together. Imperial County turkey producers have organized and will cooperate in selling.

The El Cajon Valley in San Diego County is discussing greater production of wheat and a lesser production of ground squirrels.

San Bernardino County citrus people have organized a league for the purpose of reducing assessed valuations of citrus groves.

The establishment of a branch of the university farm school at Davis is being urged for the experiment station grounds at Riverside.

The Pomona Valley Poultry Keepers' Association is a live wire in the marketing of poultry products of members these days of high prices.

Imperial Valley cotton producers are discussing a cooperative gin and oil mill. They assert that cottonseed prices in the valley are \$12 to \$20 lower than in Texas.

The building of dams for the impounding of a great quantity of water near Whitewater, Riverside County, which will supply lands in Coachella or possibly Imperial Valley, is being discussed.

Because of many flat cars ordered to Eastern states Ventura County road construction work has been seriously handicapped, but the county now hopes to arrange for use of the cars of local beet sugar producers for hauling rock and cement.

## The Coast and General

Instead of \$3,000,000,000 we subscribed \$5,000,000,000.

"More pennies" is the demand of trade. Cause, war taxes.

Louisiana is beginning to ship pecans. The crop will be good.

All exports of sugar from the United States were prohibited October 10.

India has 13 and a quarter million acres in cotton for 1917-18, a million increase over last year.

Arizona has a state seed stocks committee and is investigating as to quantity and quality of seed available for present season's planting. It will meet in Phoenix November 12.

Says "Sugar:" "The able-bodied man who refuses to work these days is not only personally contemptible, but he is a public menace and should be treated as such." Women, too.

Director Forbes of the Arizona experiment station is making a pull for greater production of wheat in that state. Most of the plantings have been at an altitude of 4000 to 5000 feet.

Condense all packages sent for Christmas to soldiers in France. Large parcels cannot possibly be handled by the department. After giving name and branch of service, mark "Christmas Box, Pier 1, Hoboken, New Jersey."

"The Packer" reports that last winter's freeze has cut short Florida's orange and grapefruit crop and that Louisiana's oranges have been damaged by winds. The Florida Citrus Exchange estimates the state's crop at 4,000,000 boxes.

Federal farm loan banks are rapidly getting to a working basis. The country over there is about \$4,000,000,000 loaned on farm mortgages. It is estimated that the greater part of this can be transferred to a five per cent loan instead of the 7-10 per cent which is estimated as present average.

Every broker, jobber, commission merchant and retailer, the latter doing a business of \$100,000 or more a year, must have secured a government license by November 1 or be subject to fine of \$5000 or two years imprisonment, or both. The only dealers in food who are exempt are farmers and country shippers who do a business of less than \$50,000 a year.

Corn growing states are seriously discussing the labor question. The corn has been grown and is ready for the husking peg. One peculiar feature of the situation is the immense quantity which has been turned out by the Southern states. The yield will be great and it is hoped that it will encourage the South in breaking away from exclusive cotton production.

Michigan bean growers are reported to have fixed a price of \$8.00 per bushel for their beans. At the price fixing meeting representatives were present from 20 to 30 bean growing counties in the state and they based this price on a report that the average cost of raising beans this year is \$57.43 per acre and the average crop eight and a quarter bushels per acre. Some of the growers protested that the price was not high enough. At a meeting of the bean jobbers held following that of the growers, vigorous protests against "profiteering" were made.

# Gombault's Caustic Balsam

The Worlds Greatest and Surest

## Who's Who

With the issue of August 11 the Cultivator started its series of "Who's Who" articles to bring before its readers some of the livestock producers of California who are responsible for the large development of the industry. Where did they come from and how long have they been engaged in California development, also how do they look, so pencil and camera are to be used, and some homely, everyday photographs and notes regarding them will bring us closer together. Bear in mind we say "homely photographs" and not photographs of homely people. The idea we wish to convey is that so far as possible we will secure photographs in everyday surroundings at the homes of the livestock producers.

Written for California Cultivator

OHIO and Minnesota have sent many of their sons and daughters to the western country, and California boasts a particularly large number from those two states.

Minneapolis, Minnesota, claims Karl Gotshall, and Columbus, Ohio, claims A. R. Magruder. These two enterprising young men are associated in the breeding of registered Holstein

Company of Stockton. His first position was with the Farmers and Merchants Bank in Stockton and very shortly afterward he opened the Bank of Ripon and was made vice president. He is president of Ripon Lumber Company, a director in the Morse Hardware Company, is an Elk, and is married.

A. R. Magruder lived in his native state till he was 21 years of age, and after careful schooling entered the business field in the capacity of credit man for a big wholesale shoe concern in Columbus. After being there for five years he was transferred to the Minneapolis branch where he met Mr. Gotshall and where the friendship was established which later on led to close business connections. In 1912 Mr. Magruder made his first trip west with the Shriners who were having a convention in Los Angeles. Of course he came north to visit Mr. Gotshall before returning East. Mr. Gotshall induced him to get back in the farming game, and the field here looked so attractive that he could not resist. Meanwhile, Mr. Gotshall had been building up a fine business by loaning money to farmers who had dairy stock for security. He induced them to buy pure bred bulls and also females if possible. Then the idea of founding a purebred herd of their own from which they could supply the ever increasing demand for Holstein cattle struck the partners and they bought 11 head of choice individuals, purchased a big ranch, erected fine buildings, and in a short time they had acquired about 75 head of the best they could buy. They will conduct official test work and in time show their herd at the fairs. Here is the best illustration I know of the quick and sure success of the purebred livestock business when founded by energetic and intelligent young men. It cannot lose, and the particular part of the state where Gotshall and Magruder settled is not at all sorry they came.

Left, Carl Gotshall; right, A. R. Magruder

cattle at Ripon, San Joaquin County, under the firm name of Gotshall & Magruder. The story of how, why, and where they got into the pure bred stock business in California is briefly told.

Mr. Gotshall attended school in Toledo, Ohio, after his father moved there from Minneapolis to go into the banking business. It was from him that he learned the fundamentals which have stood him in such good stead since he branched out for himself. He came to California in 1910 through the friendship of P. E. Holt, president of the Holt Manufacturing

## Korn Kontest

PRODUCERS and merchants of Earlimart, Tulare County, recently staged one of the most successful little fairs or contests of which we have heard. It was a Korn Kontest. The contestants were producers of milo,

raising milo, irrigation, raising raisins, etc. W. L. Norris writes as to the winners: "The crowd manifested much interest in the selection of seed and the production of better crops of all kinds. The winners of the contest were: first prize for milo, C. M. Kig-

A Quartet of Producers

Milo, kafir and feterita are becoming great wealth producers for California. These are some of the exhibits made at the Earlimart Korn Kontest.

kafir and feterita, and we are told the exhibits were well worth the prizes offered, which consisted of sacks of sugar, potatoes, flour and similar products.

At the formal opening of the contest there was a program consisting of an address of welcome and, of course, as is always in order, discussion of Red Cross work and appeal for its support, with other addresses on co-operation among farmers, methods of

gins, recently from Los Angeles; second prize, O. N. Garrison, an extensive farmer, raising alfalfa, hogs and also operating a dairy; third prize, H. T. Franklin, one of the leading poultry raisers of the district. The first prize for kafir was taken by Lloyd Wade and for best feterita by G. S. Snyder an old time Iowa farmer."

There is an area of some 40,000 or 50,000 acres of land contributory to the Earlimart section which is as yet

More Sorghum Grain Exhibits  
One of the fine displays of milo at the Earlilmart contest.

gely undeveloped and one of the  
tures of this contest was to show  
erein these lands produced wonder-  
crops. Of course there were ex-

hibits of alfalfa and other crops pro-  
duced in the same section but the  
greater interest centered on the three  
sorghums mentioned.

## Jack Cheese

**J**ACK cheese is made every morning from night's and morning's milk. The mixed milk should not test higher than 0.16 per cent acidity and should have a clean flavor. Standardize the milk to 3.1 or 3.2 per cent fat. Heat the milk to 86 degrees Fahrenheit and add 0.5 to 1.0 per cent commercial starter (clabbered milk). Add sufficient rennet (about six ounces per 1000 pounds milk) to curdle the milk ready for cutting in 25 minutes. Dilute the rennet about 40 times its volume with cold water before adding. The time for cutting is determined by the same method as for Cheddar, testing the curd for firmness. The curd is also cut in the same manner as for Cheddar. After cutting the curd should be allowed to stand a few minutes before stirring, then stir gently with the hands. Stir the curd sufficiently during the cooking process to prevent matting. The heat should be applied ten minutes after cutting to raise the temperature raised to about 100 to 112 degrees Fahrenheit in 35 minutes or at the rate of about 3 1/2 degrees in five minutes. It will take about 35 to 45 minutes to firm the curd after it reaches the maximum temperature, but the only method for determining the time for dipping should be the firmness of the curd. The curd should be slightly rubbery but not so firm as curd for Cheddar cheese. The whey is removed and the curd stirred sufficiently to remove the excess whey. Too much stirring injures the curd; do not handle it roughly. Salt is added while the curd is warm at the rate of three pounds per 1000 pounds milk and after it is thoroughly mixed and dissolved the curd is ready to press.

### Molding the Cheese

The press cloths used for molding these cheese are made of heavy sheeting and are about 34 inches square. The cloths are laid out evenly, one over the other, and are spread over the top of a large open pail. Push the center down to the bottom of the pail, saving the edges hanging over the sides. Sufficient curd (about seven pounds to make a six pound cheese) is weighed out and poured into the top press cloth. The four corners of the cloth are caught up with the left hand, while with the right hand the curd is formed round and the cloth straightened. The cloth is now taken up lightly over the curd with the left hand, while the cheese is given a rolling motion on the table, with the right hand, pressing at the same time to expel the whey. This twists the press cloth tightly over the curd, where it is tied with a string. The excess cloth is spread out evenly over the top of the cheese and it is then ready for the press.

### Pressing

The cheese are pressed between two wooden planks, 12 inches by 1 1/2 inches surfaced; the length will depend upon the number of cheese pressed or the size of the room. The first board should be laid with a slight slant to permit the whey to drain off readily. These cheese are then placed in the center of the board about one inch apart after which another board

is placed on top. If necessary the cheese can be placed four or five layers deep if a board is placed between layers. Best results can be gotten by placing the boards and cheese in an ordinary upright cheese press. Another method is to brace the first board, near a wall, about three feet from the floor; then level with the top board a lever (2 by 4, 5 feet long) is fastened to the wall with a hinge which will allow it to be raised or lowered. These levers, one every four feet, are laid over the top board and a weight (about 100 pounds) is fastened to the other end. This acts as an automatic press. The cheese are left in the press about 15 hours, after which they are removed, the press cloths taken off, and the cheese laid on the shelves. If the press cloth sticks to the cheese, pulling out pieces of cheese when removed, this indicates that the surface gets too dry while in the press. Water thrown on the cheese occasionally or the room kept moist will prevent this. In about two days after removing from the press the cheese should be dipped in hot (200 to 220 degrees) Fahrenheit paraffine and held there for 10 seconds. This will prevent shrinkage and gives the cheese a neater appearance.

### Half Skim Jack Cheese

Milk used for half skim Jack cheese should test 1.8 to 2.0 per cent fat. The night's milk may be skimmed and the skim milk mixed with an equal amount of morning's whole milk. The rate of rennet extract should be decreased sufficiently to curdle the milk ready for cutting in about 45 minutes. The cooking temperature should be lower; about 104 to 106 degrees Fahrenheit and the whey should be removed when the curd is about the same firmness as for full cream Jack. The cheese should not be paraffined as they are usually dried for grating purposes.

The above is from a circular written by Prof. H. S. Baird of the University of California. The full circular with more explicit information will be given out by the university later.

### TOPPED SANTA ANA SALE

The sale of registered Holsteins at McClure Farm, Santa Ana, October 16-17, was topped by the McClure cow, Inka Wayne Pietertje Beets, who went to McAllister and Sons, Chino, at an even \$700. She is a daughter of the great sire, Sir Skylark Ormsby Hengerveld, and looks good for a large record in the hands of her new owners. The McAllisters also secured another of the top females in the sale, a very promising two year old granddaughter of Rag Apple Korndkye 8th. The absence of any considerable number of breeders at this sale left a clear field in the bidding to many dairymen and beginning breeders who secured excellent foundation animals at most moderate prices.

Col. Ben A. Rhoades and Harold B. Rhoades handled the auctioneering in a most satisfactory manner, the junior colonel performing especially well with the highest priced animals in the sale.

The sale was managed by California Breeders' Sales and Pedigree Company, Sacramento.

Hanford, Kings County, Cal.

## Santa Anita Rancho

Anoakia Breeding Farm

**ARABIAN THOROUGHBREDS:** Two-year-olds, sired by Imported Stallion Ibn Mahruus, head of our Arabian stud. Dams are the choicest thoroughbred mares on Santa Anita Rancho.

**SADDLE HORSES:** Some of which were sired by Ibn Mahruus, world renowned imported desert saddle stallion, and Don Castano, a five-gaited Kentucky saddle stallion. These horses are mostly three-year-olds.

**POLAND-CHINA AND BERKSHIRE BOARS:** Four to nine months old. Sired by famous Poland-China herd boars, Banker's Boy and Glenview Wonder. And Berkshire boars, Kintyre Laird, Grandson's Duke and Fashion's Longfellow 5th. The dams are from the best blood lines. Meet all these animals have winnings at World's Fair. Write for catalogue.

**HOLSTEINS:** We will sell a number of young bulls. Some sons and grandsons of the noted California State Record Cows. Prince Gelsche Walker, and bulls from one World Record sow and two California State Record Cows. Write for details.

## Why Use Dirty Coal-Tars or Dangerous Carbolic Acid

When you see these words what sort of a product do you think of? Probably a dirty, vile-smelling, oily coal-tar or dangerous carbolic acid.

Then you will quickly see the remarkable advantage of using B-K, the POWERFUL disinfectant with ten times the germ-killing strength of undiluted carbolic acid, as B-K is not a poison—contains no acid to sting, or dangerous drugs to poison—no oil to gather filth on stock. B-K is clear and clean as water, and as easy to use. You should use B-K regularly for spraying barns and stock—hog pens and poultry houses—for dipping the birds and stock as well as for mixing in the drinking water. If your dealer does not have B-K, send us his name.

FREE BULLETINS—Ask for complete information—"trial offer" and bulletins on Farm Disinfecting—Contagious Abortion, Calf Scours, Hog Sanitation or Poultry Raising.

8  
BULL  
CALVES

# Unusual Holstein Offering!

Our consignment to the Quality Sale, Sacramento, December 5, 1917, consists of the following ten highly bred animals, all of show ring type and quality.

Miss Korndyke Mercedes

Miss Korndyke Mercedes 121428, Grand Champion cow—California State Fair, 1917. Heavy in calf to King Segis Alcartra Abbecker, a 30 pound son of the \$50,000 Bull.

Miss Pontiac Nudine of Springvale 175955, who has a 30 pound record made at five years. Heavy in calf to King Segis Alcartra Prilly, a 30 pound son of the \$50,000 Bull, and Grand Champion Bull at California State Fair, 1917. Also a yearling daughter of this cow by a 30 pound sire and bred to King Segis Alcartra Prilly.

Oakvale Jennie Korndyke 173499. A five year old cow with a 27 pound record, who has a 30 pound full sister. Heavy in calf to King Segis Alcartra Prilly.

Two daughters of the \$50,000 King Segis Pontiac Alcartra. One from a 31.35 pound dam—one whose first seven dams averaged over 31 pounds butter in seven days. Both bred.

A daughter of King Walker 5th and out of a 30 pound cow. Safe in calf to King Segis Alcartra Prilly.

A daughter of the great sire It and from a 27 pound three year old daughter of King of the Pontiacs. Bred to King Segis Alcartra Prilly.

A daughter of King Mead of Riverside and from a 23.63 pound dam, whose dam is a 30 pound cow. Bred to King Segis Alcartra Prilly.

A great young bull born January 11, 1917. A high class show bull whose dam is a 31.70 pound five year old, and capable of increasing present record. His sire Spring Farm King, who is a 34 pound son of King of the Pontiacs and a full brother to the first 44 pound cow K. P. Pontiac Lass. The records of the first three dams and the sire's full sister of this bull average 34.41 pounds butter in seven days.

## BRIDGFORD COMPANY

KNIGHTSEN, Contra Costa County CALIFORNIA

# World's Record Breeding

Bull born July, 1916. A good well grown individual with four near of his pedigree averaging over 30 pounds in seven days. His own dam has a record of over 28 pounds with a prospect of increasing it at next freshening.

His dam and sire's dam average over 25,249 pounds milk and 1026 pounds butter in one year.

Where can you beat this combination?

Write now for further particulars of this and a few other bulls we are now offering.

## Sacramento Holstein Sale Makes High Average

Written for California Cultivator

THE public sale of Holsteins at Sacramento, October 29-30, conducted by the California Breeders' Sales and Pedigree Company, exceeded the estimate made by the officers of the company by nearly \$3000. Ninety-six head in all were auctioned off for a grand total of \$27,480, an average per head of \$287. Thirteen bulls averaged \$376 and 59 females averaged \$328. Top bull brought \$900 and top female, \$775. There is not a doubt that the averages would have been considerably higher had some of the consignors made it a point to have their stock in prime sale condition. That these consignors made a costly mistake, which reflected not only on their business acumen but on the breed itself, was admitted after it was too late to remedy the fault. This sale was the

Sacramento Holstein Sale

Upper: Geo. Cressy at left, holding his \$610 heifer. At right, Jack Campbell, posing the son of Prince Gelsche Walker. In center, W. H. Taylor, manager Santa Anita Rancho. Lower, King Ignaro Mead, \$900, top of sale, consigned by Morris & Co., bought by Chas. Yocum.

third held by the Pedigree Company. C. L. Hughes, manager. Ben Rhoades and son Harold cried the sale.

The sale was replete with features. Several bankers from different parts of the state availed themselves of this opportunity to invest in Holsteins for the first time. If the sale did nothing else than to accomplish this it was well worth the expense. Vice-president McCormick of the Southern Pacific, attended the sale and purchased his first Holstein. Geo. A. Cressy, Modesto banker, was a heavy buyer. Gion Gibson paid the top price for females in the sale, \$775 for Woodcroft Gem Cornucopia, 168031. Chas. Yocum of Tulare purchased a large number of animals, all choice ones, including the top price bull, King Ignaro Mead. C. A. Miller of Ripon, bought Bridgford's January bull calf, Nudine Butter Boy. One of the very best buys of the entire sale was that of Prince Gelsche Walker 11th, the year old son of Prince Gelsche Walker, by Jack Campbell, Escalon. W. J. Higdon, Tulare, who rarely misses a good Holstein sale, brought a long string including the promising cow, Pauline Soldene De Kol 3rd. Mrs. Annie Donders of Fresno showed her knowledge of Holstein breeding and individuality by the purchase of several outstanding animals in the sale. There were numerous other bargains picked up at this sale, and the buyers without exception were more than satisfied. Frank Morris did not overlook a single opportunity to buy in all the granddaughters of Tilly Alcartra, and he also got a fine daughter of King Korndyke Sadie Vale 27th.

The presence of A. A. Hartshorn of Hamilton, New York, the last day of the sale was a big surprise to all present. He made a short talk, laying particular stress on the danger of sacrificing production to type, saying that because a cow had a sloping rump or a poor top line she should not be condemned without knowing whether she was a big producer or not. Mr. Hartshorn is considered one of the greatest Holstein breeders in America. He has bred and developed a long line of famous

sires and dams including Prince Gelsche Walker, and the King of the Black and Whites, two sires now owned in California. The great foundation cow, Prilly, was one of the three females upon which his fortune was built.

Consignors: Bridgford Company, Frank Hatch, Fred W. Kiesel, McAlister and Sons, A. W. Morris and Sons Corporation, Santa Anita Rancho, University Farm, A. A. Merkeley.

Morse; Korn. Seg. Alcar. Abbecker \$210.

## Field Notes From the Live Stock Men

The Southern California Duroc Jersey breeders made a fine display at the Riverside fair. Buttons advertising the red hog were worn and no opportunity overlooked to place the merits of their favorite breed before the people.

Dr. J. A. Crawshaw writes: "I am proud to say that I was successful in obtaining a son of Gerstale Jones, the \$6600 boar, to head my herd and improve the Poland-China blood on the Pacific Coast. He is doing well, and every one that sees him thinks he will make a humdinger."

Hundreds of swine breeders attended the swine day exercises at Iowa state college. Dean Curtis referred to the fact that there was a shortage of at least eight per cent in the swine crop while almost all other crops had increased to meet the demands of the food administration. Another year and

his report must be different, for the hog is as important a factor in defeating the Germans as is wheat or corn.

James Mills, proprietor of the famous Mills Orchard Company in Butte county, and an extensive breeder of livestock, was a visitor at the Riverside fair. Mr. Mills is going to sell out his Holsteins and purchase pure bred horthorns. His facilities for handling the latter breed are of the best.

Stalder Bros., Riverside County Holstein breeders, are more than pleased with the calves sired by their herd sire, King Pontiac Netherland Segis sire. They all give promise of becoming great producers and will be given every opportunity to make good records. A. J. Stalder has christened the farm, Rosamaines Rancho, and it will be known hereafter under this name.

The new stock yards at Fresno are rapidly nearing completion. The

## Economy of Keeping Sheep

WOULD not know how to do good farming without sheep," declared George McKerrow of Wisconsin, one of the best and most widely known sheep breeders of America, upon a recent visit to the food administration in Washington. "Why?" he continued, "Because my sheep use up the wastes of the farm. They clean up the grass, weeds, brush and gleanings, and in so doing turn into cash what otherwise would be lost."

"Sheep," said Mr. McKerrow, "make the most economical gains of any kind of livestock because they clean up the odds and ends. They are particularly useful on the farm in the fall of the year, for they turn into cotton the things that otherwise would not be used. At the same time they save the feedstuffs that would be given them if they did not have access to these other things."

After harvest, Mr. McKerrow's sheep are turned into the oat fields for a few hours the first day, an hour or two longer the second day; and the time gradually increased until at the end of a week they have complete possession of the fields. The lambs are permitted to enter the corn before it is cut and they clean up on the weeds and lower corn plant leaves. The lambs do not pull down the lower ears of corn as do the sheep. Roots are grown for the cattle and sheep, and after the larger roots are hauled to storage for winter use, the sheep are turned into the field and eat the smaller ones that remain. Both the sheep and lambs are turned into the aftermath of the meadows and this brings them into winter quarters in good condition.

Another profitable practice on this farm is that of plowing up fields that become weedy after harvest. These fields are sown to rape and turnips, and later the sheep are turned in. They eat the rape and turnip tops with relish and will later hollow the meat from the turnip, leaving but a shell.

Mr. McKerrow has found that a frequent change of pasture is beneficial to the sheep. A 36-inch woven wire fence in 20-rod lengths is moved about, thus preventing the too short cropping of the grass, and furthermore reducing the internal parasite plague to a minimum. Water is also an important consideration, and ewes particularly should have water the same as dairy cows.

"I would not go so far as to say

packing plant will be handling its capacity in cattle, sheep, and hogs by October 15. It was originally intended as a producers' cooperative killing organization but was finally financed by private capital. If the management pays top prices for its material and gives the producer fair treatment there is no reason why everybody concerned should not benefit.

R. H. Whitten, owner of the Whitten Ranch at Terra Bella, has purchased of R. W. Halford, Manning, Iowa, the top boar pig of his spring crop. The boar was sired by the 1100 pound Big Bob, the breed's greatest sire of herd headers, and was out of a mammoth, prolific sow by the noted 1106 pound Long Jumbo. This Big Bob-Long Jumbo cross has produced many Eastern prize winners, and Mr. Whitten has named his new boar Whitten's Big Bob. This gives Mr. Whitten six herd boars.

that there should be some sheep on every farm," declared Mr. McKerrow, "for peculiar conditions might not make it practical, but I do believe that there should be sheep on the vast majority of farms in this country. They turn waste into cash. The sort of saving that the good housewife is making in her kitchen can be practiced with corresponding effectiveness by the use of sheep on the farm."

### POWDERED HELLEBORE PREVENTS FLIES BREEDING

A safe and effective weapon against the typhoid or housefly has been found in powdered hellebore. Flies lay their eggs chiefly in stable manure. Powdered hellebore mixed with water and sprinkled over the manure, will destroy the larvae which are hatched from the eggs, but it will not kill adult flies which must be swatted or trapped.

It has long been known that flies breed in manure, but previous methods of destroying the larvae there by the use of strong chemicals have been open to the objection that the treatment under some conditions lessened the fertilizing value of the manure or actually injured vegetation. This is not true of powdered hellebore. Government experiments have shown that the hellebore is entirely decomposed in the course of the fermentation of the manure and that even in excessive quantities it does no harm except to the larvae it is intended to destroy. Chickens picking in manure treated with it suffer no ill effects.

One-half pound of powdered hellebore mixed with 10 gallons of water is sufficient to kill the larvae in eight bushels, or ten cubic feet, of manure. The mixture should be sprinkled carefully over the pile, especial attention being paid to the outer edges. In most places hellebore is obtainable in 100-pound lots at a cost of 11 cents a pound. This makes the cost of the treatment a little less than sevenths of a cent per bushel of manure. A liberal estimate of the output of manure is two bushels a day per horse. The money involved is, therefore, trifling in comparison with the benefits to the individual and the community from the practical elimination of the disease spreading fly.

## California Live Stock to So. America

Written for California Cultivator By F. F. Stonerod

IN the huge total of pure bred live stock importations to South American countries our Pacific Coast breeders have supplied but a very limited amount. England, Scotland, Holland, and Denmark, in the order named, have been the leaders up to a few years ago when our Eastern and Middle West breeders commenced to cut in on the trade. This is the reason why the shipment to Chili of California bred stock this fall is of so much importance to the industry in our Pacific Coast states.

Before writing about this particular exportation to Chili, let us hear

what Mr. E. Susaeta, the representative of Chilean interests, has to say about this wonderful country. Mr. Susaeta was born in Spain, went to Chili a few years ago and secured employment in a Valparaiso mercantile house. A college course in Chili, close study of local conditions, and natural ability won him recognition which resulted in his association with the firm of Gonzalo Campo Compania, of Talagante. Mr. Susaeta came to California a few months ago to take a post graduate course at Berkeley and, after securing his degree, he went to the University Farm at Davis for an agricultural course. After finishing

## THROUGHOUT THEIR WHOLE LIVES

you will be able to point with pride to the Holsteins you bought in the 1917 GUARANTY SALE, and long after they are gone you will still be reaping the harvest from sowing their prepotent blood in your herd.

## CUTTER'S BLACKLEG PILLS

"California's Favorite"  
for nearly 20 years

For the Prevention of Blackleg  
in calves and young cattle

Their superiority is due to nearly  
20 years of specializing in  
"Vaccines and Serums only."

Year in and Year Out they give  
better satisfaction than any  
other vaccine made, and the  
cost of a few cents per dose  
is cheap insurance against a  
disease that always takes the  
fattest and best.

Single Pills may be used for ordi-  
nary and range stock.

Double Pills should be used for  
pure bred and high grade stock.

Use any Injector, but Cutter's  
simplest and strongest.

Prices:  
10 dose pkge. Single pills \$1.00  
50 dose pkge. Single pills 4.00  
10 dose pkge. Double Pills 1.50  
50 dose pkge. Double Pills 6.00  
Cutter's Pill Injector.... 1.50

Insist on Cutter's. If unobtain-  
able, order direct.

Write for new booklet, "The  
Control of Blackleg." It tells  
about Anti-Blackleg Serum  
which cures Blackleg and  
may be used simultaneously  
with vaccine to combat out-  
breaks and safely protect val-  
uable stock.

igned separators, from highest quality ma-  
terials, and sell to you at lowest manufacturers'  
prices—less than wholesale.

Nearly 100,000 Galloway Separator giving  
satisfaction everywhere. Four practical sizes. Also  
milk canners and creamers. 500,000 satisfied cus-  
tomers prove it in your vicinity. Close shipping points  
everywhere. My free catalog honestly describes  
Galloway goods. Get it before buying. Please  
mention advertisement wanted.

WM. GALLOWAY CO., Box 3013, Waterloo, Iowa

Better service is assured by the advertiser if when  
writing you mention the California Cultivator.

at Davis he was commissioned by his  
firm in Chili to purchase a bunch of  
Holstein-Friesian cattle and a few  
choice hogs so the stock could be un-  
der his personal care when he sailed  
for home. That Mr. Susaeta has pur-  
chased one of the best lots of Cali-  
fornia live stock yet to leave the state  
will not be questioned.

But we are running ahead of our  
story. To hear Mr. Susaeta discuss  
Chili and its possibilities one can read-  
ily understand why his people down  
there sent him to California on an  
important mission. If he remains  
much longer he is liable to persuade  
some of our Californians to return  
with him. Chili is as large as the

Senor E. Susaeta

A live stock producer who will soon re-  
turn to Talagante, Chili, with some of  
California's best bred Holsteins and pure  
bred swine.

states of California, Oregon, Wash-  
ington and British Columbia combin-  
ed. The southern part is devoted to  
beef cattle and sheep raising, the  
northern part to dairying and hog  
raising. Chili produces more nitrate  
of soda than any other country and  
is a leader in copper production. Her  
central valleys are very similar to  
our San Joaquin and Sacramento val-  
leys. Water is abundant and cheap.  
Alfalfa hay can be bought for about  
\$4.00 per ton, American money, while  
prices obtained for butterfat are fully  
as high as California prices. Best of  
native labor can be had for \$15 per  
month. This is not particularly a  
boost for Chili but merely to show  
why the market for pure bred live  
stock will expand, under these con-  
ditions it cannot help but do so.

In 1912 a few head of registered  
Holstein cattle were first brought into  
Chili from Denmark, and a bunch  
from New York in 1916. Yorkshire  
hogs were imported in 1892, and Berk-  
shires about five years ago. The  
Hampshire and Romney Marsh breeds  
of sheep are popular in southern Chili.  
Shorthorns and Herefords are the  
beef breeds in favor. The market for  
dairy products is very large as the  
mineral mines in the north employ  
thousands of men and food cannot be  
grown in that part of the country but  
must be purchased in central Chili.  
The distance from Valparaiso to New  
York is less than from Valparaiso to  
Cape Colony, Africa, California, or  
New Zealand, moreover Chili is near-  
er to Europe than to any of the above  
named countries. Her fruit shipments  
are enormous, rivaling California's.  
In climate Chili is more like Califor-  
nia than any other part of the world.  
Mr. Susaeta says he never saw such  
a similarity. Indian corn is one of  
the principal crops and yields as heav-  
ily as in Iowa or Illinois. Chili has  
more than 8,000 miles of railroads, is  
more than 4,000 in length, and has  
more than 5,000,000 population. She  
has more credit in Europe than any  
other South American country, but  
very little in the United States. Will  
we ever appreciate the wonderful field  
down there open to America more  
than to any other? Spending time  
and money trying to secure steamers  
to ship goods down the coast, with no  
credit, and dealing with a country  
which is indifferent, to say the least,  
is not very encouraging to our South-  
ern neighbors in their efforts to trade  
with us. One wonders when Califor-  
nians will wake up and do their share  
to reinstate America in her former  
place as mistress of the seas and lead-  
er in world commerce.

The engravings will give the reader  
an idea of the quality of a few of the

animals which will go to Chili. We  
regret that we could not secure pho-  
tographs of all the animals in the  
shipment.

Twenty-two head of Holsteins, four  
head of Berkshires, four Yorkshires,  
and two Poland China hogs comprise  
the total. Breeders from whose herds  
the animals were selected together  
with the number from each are W. J.  
Higdon, three junior yearling heifers  
sired by Sir Bessie Forbes Tritomia  
and a four year old cow, Pearl Pet;  
Bridgford Company, six heifers, Jen-  
nie Korndyke Walker 374,438, Prin-  
cess Inka Butter Girl 360987, Inka  
Hengerveld Korndyke Pontiac 383487,

Alex. McCarty's Riverina Farms,  
Yorkshire boar and gilt; Hale I.  
Marsh, Big Type Poland-China boar,  
Major Wonder, and sow. The total  
value of the shipment is approximate-  
ly \$15,000 and it reflects credit not  
only on the men who bred the animals  
but on the good judgment and careful  
buying of Mr. Susaeta. We trust it  
will be a fore-runner of others.

## FORM THE BUTTERMILK HABIT

"Drink buttermilk freely," says the  
United States food administration in  
its effort to encourage the use of dairy  
by-products. The use of buttermilk is  
largely a matter of habit. Southern  
cities consume almost as much butter-  
milk as sweet milk. The difficulty of  
keeping milk sweet has been largely  
responsible for the popularity of but-  
termilk as a beverage.

By valiant knights the selfsame deeds  
are done  
Before the eyes of many—or of none.

## Blacklegoids

NO DOSE TO MEASURE.  
NO LIQUID TO SPILL.  
NO STING TO ROE.

BLACKLEGOIDS are small pills. Each  
pill is an accurate dose of blackleg vaccine.

BLACKLEGOIDS are easily adminis-  
tered—simply inject them under the skin  
with a vaccine injector.

## TAKE NO CHANCES.

Don't wait until your calves become in-  
fected. This means certain loss—there is  
no cure for blackleg. Vaccinate now—  
before the deadly disease shows itself.

## THE COST IS SMALL.

BLACKLEGOIDS are economical. The  
expense is trifling compared with the loss  
you are liable to sustain if you do not use  
them.

ORDER THROUGH YOUR VETERINARIAN  
OR DRUGGIST.

Write for free booklets on Blackleg,  
with full information about Blacklegoids.

Dept. Animal Industry. DETROIT, MICH.

## CUTS LABOR IN HALF

DO you first disinfect, and then go over  
all surfaces again with whitewash in  
order to keep your stables, dairies  
and poultry houses bright, cheerful and  
free of lice, mites, fly eggs and the germs of  
roup, white diarrhea, cholera, glanders, etc?  
Such a method is a waste of time, money and  
labor. Use Carbola instead—it does the two things  
at the same time. It is a disinfectant that dries  
out white—no dark and colorless—and gives much  
better results.

## CARBOLA

The Disinfecting White Paint

Carbola is a mineral pigment combined with a  
germicide twenty times stronger than pure car-  
bolic acid. Comes in powder form, ready to use  
as soon as mixed with water. Applied with brush  
or sprayer. Will not clog sprayer. Will not flake,  
blister or peel off nor soil by standing. No dis-  
agreeable odor. Absolutely safe—will not harm  
stock if they lick surfaces painted with Carbola.

If your dealer does not carry Carbola, send his  
name with order and we will ship direct.

10 lbs. (10 gals.) \$1 and over, 20 lbs. 20 (gals.)

# Cutting the Feed Bills

Written for California Cultivator By Jean A. Koethen

to feed or not to feed, that is the question; whether 'tis better for the poor hen farmer to buy four-dollar corn for slacker birds or to sell every one for what she'll bring him and let the butcher end them.

**S**OMETIMES the best way out of our troubles is to cut the Gordian knot at one whack; let everything go and begin over again with a clean slate. Sometimes, and this is more often the case, there is a way of untying the knot if only one will work hard enough at it. Most generally too one cannot let go if he wants to. He must hold on for dear life, with teeth and nails if necessary, and wring a favorable answer from a marble-hearted world. This is philosophy. It is also religion. Moreover, it is common sense and good business.

For every evil under the sun there is a remedy or there is none. If there be one, try to find it. If there is none, never mind it.

Reduced to its lowest terms, the question is, is it possible to do a profitable poultry business with feed at present prices? If so, how is it to be done? A good deal has been said in this column about the use of cheaper feeds such as barley, of which the best one can say is that it is only less expensive than wheat and corn, and the sorghums, which are not cheap at all when you buy them but can be raised at home with little water and labor, and of the use of vegetables and other greens as substitutes for part of the grain feed. Now I want to attack the question from its other side, that is the side of the hen. Does it make any difference to what kind of hen you are feeding four-dollar corn? If he happened to be a 200-egger, would that make the problem any easier of solution?

The report of the All Northwest Egg Laying contest at Pullman, Washington for the month of September is interesting reading. This contest closed October 15, so the records of pens and individual are nearly complete. September is not one of the best laying months. In fact, it is one of the poorest for the average flock. The hens in this contest were all finishing their first year in the laying pen. There were no pullets to lower the average and few molters. Mrs. Whitaker, the director, says in her letter to contestants: "Feathers have begun to fall, but in general you will see that I have kept the hens laying fairly well and am sending them home to molt." This is significant. Hens that do their molting after the first of October are good layers. Probably these hens are from flocks that had been carefully culled by the molting test, which is one of the easiest and surest. The hen that begins dropping her feathers in July or August will certainly not increase the average production of the flock.

During September the 944 hens in

the contest laid 11,377 eggs, or an average of 13.4 eggs per hen. The best layer laid 28 eggs, the poorest none at all. As the eggs were sold for 42 and 44 cents per dozen, the average income from all hens was a little more than the average price of 42.7 cents per dozen, or 47.6 cents, according to Mrs. Whitaker's figures. The feed cost for the month was 21 cents per bird, and the eggs sold for 26.6 cents per bird over feed cost. This 26.6 cents is not all profit, for an expense of \$7.00 for egg cases and some minor bills have not been figured in, but the total margin of \$251 above feed cost for this flock of less than a thousand birds in one month covers these and labor as well with still something to spare. Most poultrymen would consider themselves well paid if they received \$200 for a month's labor. Interest on investment and depreciation of plant are not figured in. In such a critical time as this a man is content if he can pay for the feed for his hens and have left a reasonable wage for himself without bothering with interest.

Washington is not California. There may be some reasons that do not appear in this report for the cheapness of the ration. I doubt if many California flocks were fed in September for an average of 21 cents per hen, but we might allow ten cents more than this and still have a reasonable profit according to this report.

The whole question of profit or loss seems to depend on the production of the hens. These hens in the All Northwest contest were picked hens from flocks which their owners knew to be more than average layers. Had they not known this or had some reason to believe it, they would not have sent their hens to Pullman. The hen that laid no eggs at all during the month ate just as much, presumably, as the hen that laid 28 eggs, yet the latter brought in 90 cents, while the former cost 21 cents and brought in nothing. The average cost of producing a dozen eggs was 18 cents, but the hen that produced no eggs raised the average cost for the whole flock. In other words, the hen that worked paid the board of the slacker hen. Wasn't that a pity, and isn't the moral of this story so plain that whoever runs can read? Get rid of the slacker first of all. Improve the production of the flock, and then it will be time to see what can be done about cheaper feed.

Down at the Riverside show the other day I talked with W. G. Suits of the Bandini Poultry Ranch, a man who has made a good living from his flock of 2000 odd hens. He said he wasn't worrying much about the price of feed, though of course he did not use any such high priced things as wheat and corn, because he had culled out the non-producers and this left his average high enough so that the ship could weather the gale fairly well. Four hundred hens were culled from the flock by the tests that are used quite generally by experiment stations and large poultry plants: color of legs, beak and earlobes, and the capacity of the hen measured by the length of her keel from breast to pelvis. The production of the flock was scarcely lowered by the removal of these hens, and they laid, the first day they were by themselves, just 40 eggs. Later on the production dropped lower, as it always does when hens are moved to new quarters, but this first day's test showed that these 400 hens had been laying about one-fourth the number of eggs they should have laid to maintain the flock average of 40 per cent. They were slackers, pure and simple, and the flock was better off without them.

What Mr. Suits did with his large flock can be done by any owner of any sized flock, no matter how small. If you have only six hens, watch them, see which ones go on the nest most regularly and always leave an egg when they come off. Keep a record of the production of the pen. Most important of all, cull out right now the birds whose shanks, beaks and earlobes are bright in color. Keep the faded looking hens that have not molted. Learn how to measure the capacity of a hen. If you have a good layer, be sure you have a son of hers to head

the breeding pen next year. Don't think that because your hens have not paid for their feed they cannot be made to do it. Above all things, don't keep any hen just because she is a hen. Find out whether or not she is a layer, if you have to trapnest. Trapnesting is troublesome business and takes a good deal of time, but if you cannot improve your flock by other means, then trapnest. Improved production is the surest cure for high cost of feed.

Chilled dry-packed poultry reaches destination in much better order than the wet ice-packed product. The dry-packed product stands delays in transit far better than the ice-packed, especially during warm weather.

Can the cockerels when it no longer pays to feed them.

Stanislaus County grain growers are dipping practically all seed sown.

**"A-1 Quality"**

**FORD**

Universal Auto Co., Spokane  
"have been using Zerolene for several months—A-1 quality."

The direct selling method from producer to consumer, and a clearing house for over 31,000 readers, weekly.  
Liner rates: Single insertion 3c per word;  
yearly contracts 2½c per word. 35c per issue minimum charge

### TREES

Here is Your Opportunity to Secure A1 citrus trees. We offer several thousand 2-year-old lemons; Eureka and Villa Franca, also Washington navel; also several hundred Valencia on sweet root. We call these good trees and we know whereof we speak. ALBERT JACKSON, Upland, Cal.

For Sale: Citrus Trees—Choice stock, young and thrifty. Selected buds, Valencia and Washington Navel, Eureka and Rialto seedless lemon. Marsh seedless grapefruit; also young seedlings. W. W. Burns, 631 Security Bldg., F. 3110, Los Angeles.

Pear Trees—Offer several thousand Bartlett, 2 and 3 feet, heavy caliper at 9c each. French prunes. Trees of all kinds. No agents; we sell direct. Write for price list. Carlton Nursery Co., Carlton, Ore.

By Far the Lowest Priced means of reaching a buyer for what you have to sell is through classified advertisements in California Cultivator. The cost is only 3 cents per word per issue, with a minimum of 35 cents.

For Sale—Valencia trees, extra fine yearlings, straight, thrifty, sour root, high buds, not fertilized, fine soil for balling. Will contract for spring planting. S. R. Coate, Anaheim, Cal.

For Sale—15,000 sour orange seedlings. One year, 8 to 20 inches. Nothing better. \$25.00 f. o. b. Randall Bros. Nursery Co., Whittier, Cal.

For Exchange—Nursery trees, lemon, orange, grapefruit and olive, for horses, wagon, implement, hay tools. F. H. Snyder, 303 So. Hill St., Los Angeles.

Olive Trees—Mission, Manzanillo, Ascolano. Propagated by me from trees of known bearing qualities. Guaranteed. L. T. Schwacofer, Hemet, Cal.

Citrus Trees—All kinds, any quantity. Butler's Morning Side Nursery, Laramanda Park, Cal.

Citrus Nurseries, Murphy Oil Company, East Whittier, California. Selected stock for sale; inspection invited.

### WANTED

Wanted—Hog man, capable of handling one of finest registered Poland-China herds in state. Want energetic man of sterling character and brains, thoroughly experienced, yet willing to follow instructions. Give age, full experience, references and salary expected at start. Address Strong, Care Cultivator.

Wanted—A man who knows Men, Tractors, Soils, Beans and Citrus Trees. Scientifically and can get results under model conditions. To Superintend a fourteen hundred (1400) acre modern irrigated ranch in San Fernando Valley. The Sunshine Co., 607 South Hill street, Los Angeles, Cal.

Wanted—Hogs of all sizes, weights or colors. Any number from one to several thousand considered. What have you? Durbin & Forbes, 722 San Fernando Building, Los Angeles.

Wanted—Experienced citrus nurseryman to take charge of citrus nursery. Good proposition for reliable man. State age and experience. T. J. Walker, San Fernando.

Farmers—I want to buy potatoes, onions, good or broken beans, peas and Egyptian corn from ten sacks to carloads. Write J. H. Johnson, 1460 Home Ave., Fresno.

Beans! We Buy All Kinds of Beans—Send samples. Also Sudan Grass. WESTERN SEED COMPANY, 116 East 7th St., Los Angeles.

Wanted—3 gang 12 inch P. and O. Oliver, or Deere tractor plow. Power lift. Geo. Small, Porterville, Cal.

### SEEDS AND PLANTS

Alfalfa Planters, fill your fall requirements NOW with GREEN-GOLD seed. High quality because of personal field selection. Low price because of direct dealing. Send for samples and prices. Bomberger Seed Co., Modesto, Cal.

\*\* ORDER YOUR SEEDS NOW \*\*  
If you are going to need any seed for next season now is the time to render your order. It may be impossible for you to buy what you need later. V. A. Peterson Alfalfa Seed Co., Arbutuck, Cal.  
\*\*ALFALFA SEED OUR SPECIALTY\*\*

Alfalfa Seed—Common variety, hairy and smooth Peruvian. Grown under ideal conditions. Do not buy until you have compared my prices and samples with seed others offer. E. F. Sanguinetti, Yuma, Arizona.

Rhodes Grass—The strongest and best feed. Most drought resisting forage known. Will grow on hard alkali ground where nothing else will grow. Imperial Valley Nursery & Seed House, El Centro.  
Rhubarb—\$1127.00 from one acre. A crop every month of the year. Write to me and I will tell you how you can do as well. J. M. Stone, Lodi, Cal., Route 4.

Mr. Alfalfa Grower—If you want good seed at the lowest price, write me for samples and prices. Smooth Peruvian a specialty. O. C. Nordahl, Bard, Cal.

Vetch Seed—New crop clean seed, \$4.00 per 100 lbs., on car. Alsike, Red Clover. Price on application. Carlton Nursery Co., Carlton, Ore.

New Crop Alfalfa Seed now ready. Not the lowest in price, but high in quality. Leo Turner, Yuma, Arizona.

### AUTOMOBILE STORAGE BATTERIES

Titan Batteries for Service, get our prices before buying or having an old battery repaired. Call or write, Olive Street Electrical Co., 910 South Olive St., Los Angeles, Cal.

### HOGS

Registered Durocs—We offer for sale a choice service boar out of a daughter of M. desto King and by a grandson of Burk's Good E. Nuff; young sows and boars out of Model Queen of U. F. and by a son of Golden Wonder; young sows and boars out of a granddaughter of John Orion and sired by a son of Model Col.; three young boars out of a great sow of Crimson Wonder breeding and sired by a son of King's Col. Every one cholera immune by the simultaneous method. Registered, crated free of charge. If you cannot visit us write for prices. Derryfield Farm, L. O. O. F. Building, Sacramento, Cal.

Chester Whites, the Billiken Brand—The big winners at the California State Fair; Billiken was Grand Champion boar; a son was Reserve Grand Champion and a daughter was Grand Champion sow. Do you want some of this strain? Twenty gilts bred to farrow during October and November. Fifty Billiken pigs, both sexes, March and April farrow. Every animal is cholera immune. Write for prices and booklet on Chester Whites. C. B. Cunningham, Mills, Sacramento County, California.

Grape-Wild Farm Berkshires—World's Fair Grand Champion Grand Leader 2nd heads our herd, not only himself a champion but the sire of champions. At the 1916 California state fair his daughters won all of the senior sow classes including the grand champion sow. At the 1916 Oregon state fair a Grand Leader sow was junior champion. We are offering a number of choice boars of exceptional breeding and are also booking orders for fall pigs. A. B. Humphrey, Escalon, San Joaquin Co., Cal.

Superba, World's Grand Champion Poland-China boar and one of the greatest sires of the breed. Spring boars ready for service, also few sows bred to this noted sire, reasonably cheap. Rough's Greenfields, Arlington Sta., Riverside, Cal.

Berkshires—First prize junior boar; first and second senior boar pigs including junior champion; fifteen spring and fall open gilts sired by Ames Rival 115, champion boar; and two junior yearling bred sows priced cheap for immediate sale. F. D. Hall, Perris, Cal.

For Sale—30 Poland-China sows, some with litters, others to farrow soon. One registered Poland-China boar. Mrs. Ina M. Randolph, Administratrix, 865 Glendale Ave., Glendale. Phone Glendale 1291W.

Rancho Rubio Durocs—Some extra good gilts sired by Orion Model and California Keen 5th and out of my best sows. Write for prices bred or open. Weaned pigs either sex. Elmer Lamb, Ceres, Cal.

Duroc-Jerseys—Five, four months past. Thrifty and fat. Price \$100 for the bunch. One Berkshire, bred for second farrowing, \$50. Exceptional bargains. Jersey Queen Farm, San Jose.

PLW. Duroc-Jerseys, the most consistent winners wherever shown. Peters, Lamson & Walker, Devore, San Bernardino County, Cal.

Bernstein Sells 20 head of choicest Poland-Chinas at the Big Sale October 19 at Hanford, Kings County. W. Bernstein.

For Sale—Why pay \$300 for a sow when \$20.00 will buy a July gilt. Big, smooth, long Poland-China. Registered, crated, f. o. b. N. M. Lester, Gridley, Cal.

Duroc-Jersey Spring Boar—Sire, dam, dam's dam, and three litter mates of dam were 1916 Riverside winners. A high class boar priced to sell. H. C. Withers, Palo Cedro, Cal.

Big Type Durocs—Well grown out February and March pigs of either sex in any quantity. We ship only the tops and butcher the culls. F. M. Johnson, Napa, Cal.

Most Money in Duroc-Jerseys—Bred sows and weanlings, either sex all the time. Delta Farm and Live Stock Co., Colton, Cal.

Large Yorkshires—The ideal hog for the progressive farmer. Service boars and fall pigs, both sexes, for sale. A. L. Tubbs Co., Calistoga, Cal.

Large Type Poland-Chinas are prolific and profitable. Can furnish boars any age at reasonable price. J. A. Crawshaw, Hanford, Cal.

Large Type Poland-Chinas—Very best stock. Prices reasonable. Weanlings my specialty. C. R. Hanna, Riverside, Cal.

Durocs—P. & L's Defender by Defender heads herd. Joseph Prendergast, Route 2, Box 87A, San Bernardino, Cal.

Model Herd Berkshires bred for size and quality. Weanlings and gilts. J. L. Gish, Laws, Cal.

Carruthers' Farm Berkshire Hogs—Our herd won Premier Exhibitor prize at the P. P. L. Exposition, Mayfield, Cal.

Poland-Chinas—A few good breeding boars. S. F. Williams, Orland, Cal.

### LIVE STOCK

Butte City Shorthorns, Shropshires, Berkshires and Ponies. Stock of all ages for sale. Can supply one or a carload. Get our prices and descriptions before buying. Butte City Ranch, Box C, Butte City, Glenn Co., Cal.

For Sale or Trade—Registered Percheron stallion; black, age five years; sound; weight 1950 lbs.; height 17 hands. Good breeder and fine action. Will trade for registered Holstein cows. Picture, price and pedigree on application. Address D. B. Adams & Son, H. F. D. 1, Modesto, Cal.

Registered Shires—Blackhawk Stock Ranch. Importers and Breeders. Easton & Ward, Burlingame, Cal.

### CATTLE

Pedigreed Bull Calves, Registered \$50.00, unregistered \$25.00. Service bulls \$75 and up. Good individuals from producers. Cows with yearly records at a profit, tuberculin tested. Write or come and select. Horses. N. H. Locke Co., Lockeford, Cal.

For Sale—As we are going into registered Holsteins exclusively, will sell or trade for steers 50 head grade Holsteins and Jerseys. All bred to registered bulls. An excellent opportunity to pick up a top string. Terms. Agee Bros., Brawley, Cal.

D. O. Lively announces a purchasing trip East. He will execute orders for customers for any kind of livestock and save money for buyers. 215 Hobart Bldg., San Francisco.

### WOODLAND COW BREAKS CALIFORNIA RECORDS

Aaggie Acme of Riverside II has won fame in the state dairy cow competition. The university states that her production of \$628 worth of milk and butterfat during the ten months is exceeded by only a few cows in the United States or in the whole world. It takes six average California cows to equal her production.

Her daily average production of three pounds of butterfat for ten months is equivalent to more than three and a half pounds a day of ordinary butter. She was bred and owned by the A. W. Morris and Sons Corporation of Woodland. Her production for ten months was 22,088 pounds of milk and 928.813 pounds of butterfat, equivalent to about 1080 pounds of butter, worth at present prices at least \$640. The 17,670 pounds of skim milk, worth an additional \$88, make her production during the ten months \$628 — and this without counting the value of her calf.

## Legal Queries

Louis B. Stanton, attorney, 243 Wilcox building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

### Straying Stock

A and B live upon an almost unused country road; each maintains fences on each side of the road. A has some fenced range and at times his cows and horses get on road, as do his neighbor's. B leaves his gates open and the stock go into his fields; B corrals the stock in the fields and also stock only on the road, then sends for the owners to come and get their stock. A has shot horses so that they were crippled for months. B claims he has right to corral the stock in the instances mentioned and also to shoot them, if trespassing. Is this correct?—Subscriber.

As far as the corralling of the stock a concerned B is within his legal rights. The estray act provides that anyone finding an estray domestic animal upon his premises or upon the highways adjacent thereto may take up the same and have a lien thereon for all expenses incurred in caring for said animal. As long as he leaves his gates open he is not entitled to claim damages for the injury done by the trespassing animals. He is not entitled to shoot the animals, however, whatever they have done. In fact by his actions in that respect he not only renders himself liable to the owner for the value of the services of the animal for the time it is recovering from the injuries, but also liable to prosecution for cruelty to animals, punishment for which is imprisonment in the county jail for not to exceed six months, or a fine of \$500 or both.

### Lawful Fence

What is considered a lawful fence?—Subscriber, Yuba County.

There is no general legal requirement for lawful fence; the statute treating of the recovery of damages resulting from the trespassing of animals upon private lands speaks only of "a substantial fence or other inclosure." In the fence law applying to certain counties, of which Yuba County is one, a fence has been defined as follows: "Wire fence shall be made of posts not less than 12 inches in circumference, set in the ground not less than 18 inches, and not more than eight feet apart, with not less than three horizontal wires, each one-fourth of an inch in diameter. The first one shall be 18 inches from the ground, the other two above this one at intervals of one foot, all well stretched and securely fastened from one post to another, with one rail, slat, pole, or plank of suitable size and strength securely fastened to the posts not less than four and one-half feet from the ground."

### Damages from Stock

Does a person have to have a lawful fence before he can collect damages caused by trespassing stock?—Subscriber.

The statute concerning the recovery of damages from injuries caused by trespassing animals provides that such damages can be recovered only when the land is planted to growing crops, vines, fruit trees, or vegetables and is at the time entirely enclosed by a substantial fence or other enclosure.

### What are Estrays?

Are cattle or horses considered estrays when they are branded and belong to neighbors living within a mile of where they are taken up?—Subscriber.

For the purposes of the estray act they are; in fact the act provides that where the owner of the animals is known the taker up may prepare and serve a notice upon the owner containing a description of the animal or animals, with the marks or brands, the probable value, the place where taken up and the place where confined. If the taker up knows the owner of the animal he may serve this notice upon him, for which he is entitled to a fee of 50 cents; if he does not know the owner he must record such notice and the taker up has a lien upon the animal for his costs in that respect.

### Stock on Unfenced Land

Can those having land unfenced compel adjoining owners having unfenced lands to keep their stock off?—Subscriber.

The owner of unfenced land is justified in driving off stock belonging to neighbors from his lands and he is entitled to take up animals straying upon his lands under the estray act, but he cannot restrain the owner of the animals from permitting his stock to stray. Nor is there any means whereby the owner of unfenced land can be required to fence or close his gates if he has fenced and desires to leave his gates open.

### STATE GRANGE CONVENTION

At the convention of the State Grange which ended its 1917 convention at Napa last week it was voted to hold the next California State Grange at Ukiah in Mendocino County. Other sections inviting the Grange were Santa Rosa, San Jose and Monterey.

Officers elected for the next year are: Treasurer, M. Farrell, Mountain View; secretary, Mrs. Martha Gamble, Santa Rosa; gate keeper, Robert Scholz, Campbell; Ceres, Miss Lula Eipper; Pomona, Mrs. Mary Church, Saratoga; Flora, Mrs. O. H. Braugher, Sacramento; lady assistant steward, Mrs. Mamie Sanford, Sacramento; pianist, Mrs. Alice E. Winans, San Jose; A. Van Maren was named on the executive committee for a term of three years.

Rousing resolutions were passed in effect that our liberty and the preservation of our institutions depend upon the successful termination of the war, that efficiency in the greatest measure is demanded for that successful termination, and that the saloon is the greatest destroyer of such efficiency, "therefore be it resolved that the best interests of our country demand that the saloon be abolished."

Representatives of the nation's butter, poultry and egg industry, in conference with food administration officials, went on record recently as unanimously favoring the license system. All the large produce markets of the United States were represented.

The licensing system requires the principal classes of produce handlers—among which are wholesale dealers, butter manufacturers, commission men, and those retailers whose business exceeds \$100,000 a year—to make monthly reports to the food administration and to supply such other information as may be desired.

In the opinion of market experts, the effect of broad government control will be a more uniform trend of prices, the elimination of excessive profits and greater public confidence in those who handle the nation's food between producer and consumer.

## ALPHA POWER SPRAYERS

FOR QUICK, EFFECTIVE SPRAYING

BUILT IN FIVE SIZES

### THE PUMP

Equipped with the Alpha Automatic Pressure Regulator which holds the pressure steadily at the desired point and relieves the engine and pump of unnecessary strain when nozzles are closed. All parts of pump are readily accessible and interchangeable.

### THE ENGINE

The power behind the pump is the dependable high class Alpha Engine. When spraying you have no time to lose tinkering with an unreliable engine. Intelligent handling of the Alpha guarantees you freedom from troublesome delays. No cranking necessary; no batteries. A vigorous full powered engine that will last for years.

### THE TORCH

In Flanders' fields the poppies blow  
Between the crosses, row on row,  
That mark our place, and in the sky  
The larks still bravely singing fly,  
Scarce heard amidst the guns below,  
We are the dead. Short days ago  
We lived, felt dawn, saw sunset glow,  
Loved and were loved, and now we lie  
In Flanders' fields.

Take up our quarrel with the foe,  
To you from falling hands we throw  
The torch—be yours to hold it high,  
If ye break faith with us who die,  
We shall not sleep though poppies grow  
In Flanders' fields.—Riverside Press.

### MILITARY TRAINING AS AN ASSET

**T**UST size up the boys in khaki," when they come back home on leave and you can realize the statistical fact that the war will add five years to their average chance of life, says the Fresno Republican. Every one of those boys has those five years, or more, now visibly engrafted in his frame. From the tan of his skin and the brawn of his muscles to the self-control and self respect of his soul, he is already wound up for a longer run than life would otherwise have given him. And his training is not a quarter done yet. Some of that training, to be sure, is going to be done, not for his benefit, but for the

tenth as many as would do it in the ordinary risks of civil life. The difference is that in the army we shall have the satisfaction of the one-tenth, while in civil life we shamefully hide ourselves from knowledge of the nine-tenths.

Every risk of life, of disease, of morals, and of general slackness and worthlessness, is less in the army than at home, save the single risk of explosions—and even that risk is not absent at home. And the improvement, physical, mental and moral, is an asset now and for life—for a longer life, in fact, than the boys without the army training would have lived.

### "GOD SAVE OUR SPLENDID MEN"

**T**HE Boston Transcript publishes a letter from a visitor to Canada who attended, while in Winnipeg, a Sunday afternoon service of the National Council of Women. He writes:

"When Lady Aikins closed that solemn session of Canada's leading women, she simply said: 'Now we shall pray for our gracious King and for our splendid men.' The crowd arose, the pianist struck a chord, and the first stanza of the national anthem swelled forth. Then there followed, with a fervor that put many handker-

O, God of Love, of Mercy—and of Peace,  
Give me strength

Today

And for the days that bring I know not what;  
To turn my eyes toward That Great Light that streams,  
Through the black clouds of war, about us all,  
That Light he follows in the trenches, where  
I sent him—freely—because he is a man  
And knows the measure of his life is not  
In length and fullness of its days, but in  
The Meeting of The Test.

And give me strength, O God,  
To keep That Light enshrined in my own heart,  
That I may wait, and work, and serve, as he  
Is serving, and that I may make myself  
As true a woman as he is a man,  
O God!

war's; some of the food he will not get in the trenches and some of the sleep and shelter he will not get, will be hardships and be endured, rather than experiences to be profited by. Some of the surplus brawn he is accumulating now is reserve to meet that strain. And there will be more danger of being blown up by a shell in the army than there is of being blown up by a boiler or run over by an automobile now. But one is not safe from those things, anywhere. We killed thousands of our young men, last year, to run our railroads and factories, and we will kill more thousands next year, to run the war. Life is a hazardous occupation anywhere, and none of us finally survive its risks. But the khaki boy has a hundred times less risk of dying of disease than his grandfather had in the Civil War, and two or three times less than he would have at home; if he gets shot the chances are fifty to one that he will get well, and the extra risk of being blown up now is no more than insurance premium on the certainty of adding five years to his allotment at the other end—the end where you are now—when he comes back. So, altogether, war is a profitable, though risky, adventure. There is some gamble in it, but the stakes are good if you win—which most of the players do.

The balance of advantage is much the same on the moral side. The positive moral gain is a firmer moral fiber, in disciplined courage, self-reliance, self-respect, order, loyalty, patriotism and the inspired spirit of willing sacrifice. The moral dangers are brutalization, drink and vice. The brutalization, in an army like ours, is mostly fiction. The men whom war brutalizes were brutal already. And the chief feature of the other risks is that we know about them. Some boys who never drank before may learn to drink in the army—but not one-tenth as many as would learn it in the same time in civil life. The difference is that we shall know how many. Some boys who had no previous experience in lewdness will learn it in the army and some of them will be diseased by it—but not one-

chiefs to eyes, another stanza, written since the war began, and now sung all over Canada:

God save our splendid men,  
Send them safe home again:

God save our men!  
Keep them victorious, patient, and chivalrous,  
They are so dear to us,  
God save our men!

"That amendment to 'God Save the King' is one of the most significant side-lights of the war. It reveals the new and democratic mood of the people who are giving of their best to the great cause. As a commentary upon President Wilson's address of April 2 it needs no words. In all the long years and generations that Britons have been singing 'God Save the King,' it never occurred to anybody to add a prayer for the men who serve the King. Now it is done instinctively and fervently, with no thought of disloyalty to his Majesty, but only in the natural assumption that the welfare of the soldiers ranks equal with that of the King. All religious services in Canada, at least in the Protestant churches, include the singing of the national anthem; and all, except where the strain is too great upon the mothers, include 'God save our splendid men.' Who can trace all the wonderful ways in which democracy is doing its work in these changeable days?"

This verse is also being added to "America" as sung in churches in the United States. We hope and believe the custom will become universal.

### MEAT AND PASTRY ROLLS

Chop left over meat (of one or several kinds mixed) fine and season it well. Mix in enough butter or other fat to make it "shape" well. Form into rolls about the size of a finger and wrap around each a thin piece of short dough made from pint flour, two tablespoons baking powder, salt and milk enough to mix. Bake rolls in hot oven until they are a delicate brown. Serve hot.

Brush lower pie crust over with unbeaten white of egg, and it will not absorb juice and be soggy.

# SOME CABBAGE RECIPES

How to vary the preparation of cabbage from "plain boiled" is suggested by the United States department of agriculture in the following recipes:

## Cabbage with Sour Sauce

After taking off outside leaves, remove tough stalk from a small head of cabbage; cut in quarters; soak in cold water and cook in boiling salted water in uncovered dish, adding one-fourth teaspoon soda. Cook slowly from 30 minutes to one hour, drain, and serve with the following sour sauce:

Melt one tablespoon butter or other fat, then add one tablespoon flour and one-half cup milk. Stir over the fire until hot and add one teaspoon made English mustard and two tablespoons warm vinegar. Pour over hot cabbage. preferred a plain cream sauce can be used.

## Smothered Cabbage

Cut fine one-half head cabbage. Melt two level tablespoons butter or other

fat in a pan and stir in two level tablespoons flour. Add the cabbage, one cup sweet milk, one teaspoon salt, and one-eighth teaspoon pepper. Cover closely and simmer slowly 30 minutes.

## Cabbage Pudding

Shred head of cabbage closely and cook in salted water until tender. Drain and place in buttered dish in layers with sprinkling of grated cheese between. To two level tablespoons melted butter or other fat add two table spoons flour; add cup of milk, yolks of two eggs, one teaspoon salt, and one-half teaspoon mustard. Stir over fire until it boils, then add beaten whites of eggs. Pour over cabbage, mix well, and bake one hour.

## Stuffed Cabbage

Remove coarse outer leaves and core. Parboil three minutes. Fill core and inside of each leaf with finely chopped left-over meat (raw meat is best), or sausage. Tie securely in cheesecloth. Place in kettle with two or three carrots and onions. Cover with stock, and let simmer slowly two hours, or until tender.

## Cold Slaw

Slice small cabbage very finely. Soak in cold water until crisp. Drain and dry between towels and mix with cream salad dressing. It will improve the dressing to add to it a very little curry powder.

## A SOLDIER'S CREED

A French soldier has worked out a plan whereby he overcomes fear. His creed is as follows:

"Of two things one is certain, either you're behind the line or you're on the front. If you're behind the lines there is no need to worry.

"If you're on the front, of two things one is certain, either you're resting in a safe place or you're ex-

Will You Give Your Thanksgiving Dinner to Our Soldier Boys? Not the whole dinner, but "the fixings," just the extras that make it a feast.

Every member of the California Cultivator force has pledged himself or herself to give the cost of the extras to such a fund.

Will you join us?

If no representative of the Red Cross, Y. M. C. A. or K. of C. is near you, send to California Cultivator, Los Angeles, and we will send your contribution to one of these organizations.

Read "Spice in Variety" on editorial page.

posed to danger. If you're resting in a safe place there is no need to worry.

"If you're exposed to danger, of two things one is certain, either you're wounded or you're not wounded. If you're not wounded there is no need to worry.

"If you are wounded, of two things one is certain, either you're wounded seriously or you're wounded slightly. If you're wounded slightly there is no need to worry.

"If you're wounded seriously, of two things one is certain, either you recover or you die. If you recover there is no need to worry.

"If you die you can't worry." After mental action of this kind the soldier found that fear and worry were gone. He did the duty immediately before him and let the rest go.

## ANOTHER QUESTION

Written for California Cultivator By B. L. Welch

WHO is she who can be my companion, Old Man Selfish said, and answered his own question: "She who will come at my command; have my meals ready when I am ready to eat, and prepare such as I like; have my clothes clean and where I can find them, my slippers in place, also paper, pipe and tobacco; look after everything that commands attention about the house; buy lots with little money; keep out of debt; ask for no money; be satisfied and don't grumble; love me better than anybody else and treat me with admiration and respect." Mr. Fairmind asked: "Whom can you be a companion to?" Selfish answered: "That is another question."

Thou, too, sail on, O Ship of State! Sail on, O Union, strong and great! Humanity with all its fears, With all the hopes of future years, Is hanging breathless on thy fate! —Longfellow.

# Your Good-Morning Cup of Coffee

—should be clear and uniform—always retaining the delicate aroma and distinctive flavor of perfect coffee.

To every Grocer the question of quality coffee is the most outstanding requisite of his stock. The Grocer who recommends JEVNE'S Coffee is building up his reputation for quality. Compared by any test

### RICE

Wholesale quotations:  
 Cal. .... 7.50  
 Broken ..... 5.60@6.00

### BEANS

Limas have reached a point where some sales were made as high as \$13.50, but the government has apparently taken a hand and some government purchases have been made on a straight \$11.50 basis. This has affected the market and practically no prices made, neither any transactions excepting to meet immediate needs. Lady Washington and Small Whites have been purchased by the government at \$11. Teparys have dropped and are not commanding more than \$8.00. These are prices made by wholesaler to retailer.

Lady Washington ..... 14.00  
 Limas ..... 14.00  
 Pinks ..... 10.50  
 Manchurian Reds ..... 11.00

Quinces—Bx., 1.00@1.25.	

## DRIED FRUITS

Not producers' prices but prices of wholesaler to retailer.

Peaches—Unpeeled, lb. standard, 9 1/2; choice, 9 1/2; extra choice, 10; fancy, 11. The Peach Growers' Association has disposed of all stock and is not offering.

A. J. Sturtevant of the California Peach Growers' writes: "It has been a long time since we made any alteration or changes in our price list. We have been withdrawn from the market on all varieties of dried fruits. In all probability we will have some grades to offer a little later on. The crop has run very largely to standard and choice grades, the percentage of fancy and extra fancy being unusually light. Shipments of fruit this year have been unusually delayed because of two very annoying conditions; namely, the shortage of cars and difficulty in securing box shooks. These two factors will influence our re-entering the market. We would not care to accept any further business until we have taken care of a large enough portion of the orders already in hand so that we can see daylight ahead. Markets all over the United States are crying for fruit. So our entire attention at this time is being devoted to taking care of this demand for immediate shipment."

Figs—In 50-pound boxes, per pound. White Adriatic, standard, 8 1/2; choice, 9; extra choice, 10 1/2; fancy, 11 1/2; Calmyrna, fancy, 15 1/2; extra fancy, 16 1/2.

Apricots—Lb., bulk basis: Standard,

Extr. W. W. Sage 16

Lt. A. Alfalfa, 13; do Sage 14

Umber Sage 10 1/2@12 1/2

beeswax, lb. 38@40

14 1/2; ch., 15; ext. ch., 16 1/2; fcy., 16 1/2; ext. fy, 17 1/2; fy. Moorpark, 17 1/2; ext. fy., 18 1/2.

Prunes—60s to 90s, 6 1/2 basis; 50s to 60s, 1/2c premium; 40s to 50s, 1 1/2c premium

Apples—In 50-pound boxes, lb.: Fancy 15 1/2; extra choice, 14 1/2; choice, 14

Pears—Bulk basis, lb.: Fancy, 11 1/2; extra choice, 13 1/2; choice, 8; standard, 6

Raisins—F. A. Seymour of the California Associated Raisin Company, writes: "We can not confirm any more orders for seeded raisins—either carton or bulk—for November shipment. The car situation is such that we are unable to operate our plants to their capacity."

## BEANS

Jobbers' prices, cwt., new crop, re-cleaned.

Limas 13.00@13.25

Bayous 8.75@9.00

Small Whites 12.00@12.25

Mexican Reds 9.00@9.50

Large Whites 11.75@12.00

Pinks 8.75@9.00

Blackeyes 9.00@9.25

Red Kidney 13.00

Cranberry 12.75@13.00

## HOPS

Per lb.: California crop of 1917, 30@35; on contracts, spot, 1916 crop, 18@22; old, 8@15.

## RICE

California rice, new crop, cleaned, 100 pound head rice, 6.70; brewers', 5.25; screenings, 5.60.

Rough rice, 100 lbs., 3.20@3.40.

## HAY

Under date of Nov. 3, Scott, Magner & Receipts for the past week, 1334 tons, last week 1740 tons. A large percentage was of alfalfa. Most of the arrivals were on government requisitions. Thus the general receipts have been exceedingly small. The lack of cars on railroads seems to be a dominant factor of the market.

The market has remained firm throughout the week, yet demand has been very light. Although the weather has remained dry there are at this writing indications of showers shortly. It is to be hoped that should the rain come that it will be in sufficient quantities to start the grass on the ranges as a small amount would only tend to kill the dry feed and be of very little benefit to the new feed.

We quote today wholesale prices in carload lots as appear from dealers' transfers. For prices to consumers charges of cartage, commission and handling must be added according to conditions.

Fancy Wheat Hay (light 5 wire bale, ton)	26.00@27.00
No. 1 Wheat or Wheat and Oat Hay	23.00@25.00
No. 2 Wheat or Wheat and Oat Hay	20.00@22.00
Choice Tame Oat Hay	25.00@26.00
Other Tame Oat Hay	21.00@23.00
Wild Oat Hay	20.00@23.00
Barley Hay	20.00@23.00
Alfalfa	20.00@24.00
Stock Hay	17.00@19.00
No. 1 Barley Straw, bale	60@90

## GRAIN

Grain Exchange prices, ctl.

Wheat—Government prices: Common white hard, base price is \$3.50 per cental, or \$2.10 per bushel of 60 pounds delivered in terminal warehouses in bulk; soft wheat, base price 2 cents per bushel less, or \$2.08 per bushel; white club (including Sonora), \$2.06 per bushel. If wheat, after cleaning, weighs 60 pounds or more to bushel, base price stands; if 58 to 60 pounds to bushel, 3 cents per bushel reduction; if 56 to 58 pounds, 6 cents per bushel less; if less than 56 pounds, grain becomes sample grade and sells on its merits up to within 1 cent per bushel of 56-lb. wheat. Sacked wheat 4 cents per bushel more, less tare for weight of sacks.

Corn, California Yellow	3.50@3.75
Australian	3.75
White Egyptian	3.00@3.10

Millet, re-cleaned	4 1/2@5
Alfalfa	20@21
Flax	6@6 1/2
Rape	2 1/2@3

## Citrus Fruit Market

Los Angeles, Nov. 7, 1917.

At midnight October 31 the citrus year for California citrus fruits, 1916-1917, ended. Citrus shipments were greatest in the history of the state, 54,504 cars. The record was previously held by the year ending in 1914, when 48,338 cars were shipped. The year preceding that record year, that of 1912-13 when the big freeze occurred, totalled only 18,960 cars. Shipments for 1911-1912 were 40,680.

## Shipments in Detail

Shipments from Southern California from November 1, 1916 to October 31, 1917: oranges 40,702 cars, lemons 7748, total 48,450; from Central California, oranges 5044, lemons 165, total 5209. From Sacramento, Butte and other northern counties, 845 cars of oranges; a grand total of carload shipments for the year, 54,504.

Shipment for year ending October 31, 1916: Southern California, oranges 31,757, lemons 6940, total 38,697; Central California, oranges 5416, lemons 69, total 5585; Northern California, oranges 610, lemons 1; total for the year of 44,893.

Shipments for the year ending October 31, 1915: Southern California, all citrus fruits, 40,160; Central California, 5893; northern 632; total 46,685.

Shipments for the year ending October 31, 1914: Southern California all citrus fruits, 41,978; Central California, 5951; Northern, 409; total, 48,338.

Not only has the total output been the greatest, but marketing conditions have been almost invariably good from the first day's shipments. In addition to this great shipment it will require another 30 days before all Valencias have been marketed. Navel shipments will be later than usual, and the coming year's navel output will probably not be 50 per cent of that of last year. We may also add that Florida's output will be greatly reduced next year.

## FROM THE AUCTION

October 31

New York, 12 cars Val. Val. \$1.45-\$7.55.

St. Louis, 1 Val. Market good on fancy stock, Val. \$2.80-\$3.60.

Boston, 5 cars. Val. \$3.25-\$4.60, Lem. \$3.40-\$8.05.

November 1

New York, 7 cars higher. Val. \$2.90-\$5.30, Lem. \$5.55.

November 2

New York, 13 cars. Val. \$2.50-\$7.45.

November 5

New York, 17 cars, Val. \$2.55-\$7.85.

Boston, 8 cars. Val. \$3.30-\$8.45.

\$4.10-\$5.60.

Shipments

Shipments from Southern California since November 1, oranges 333, lemons 45.

## MONTHLY WEATHER AND CROP BULLETIN

October in California was warm and dry, which was favorable for harvesting late potatoes, rice, beans, sugar beets, apples, grapes, olives, etc. It, however, was unfavorable for ranges and for fall plowing. Feed on the ranges is short, and in some few counties cattle are getting so poor stockmen fear their losses during the winter will be heavier than usual. Considerable dry plowing has been done; but no seeding of wheat or barley except in a few of the southern counties. While the bulk of the sugar beet crop has been harvested under excellent conditions, there is still a portion not hauled to the factories. In general sugar beets have turned out better than expected.

A splendid crop of rice and a large crop of beans have been secured. Late potatoes matured nicely and most of the

crop has been dug and marketed or is ready to be hauled to places of shipment. In a few places tomatoes were slightly injured by frost, but by far the greater part of this crop was gathered in the best of condition.

Apple drying, prune drying and raisin drying were practically finished during the month and all three crops were saved in fine condition. The harvesting of wine grapes is also nearly finished. This crop while not coming up to expectations in quality is above average in quantity. The orange crop in Tulare County is about two weeks late, and the crop here, as well as farther south, will be comparatively light on account of the damage by hot weather last June. Oranges are beginning to color and lemons are sizing up slowly in Tulare County. In Los Angeles County the month was favorable for oranges and lemons, except rain is needed for cover crops. The orange trees are thrifty with an occasional one in nearly full bloom. Valencias promise nearly a full crop if they grow to size. Very few lemons have been picked; but there will be a good crop to pick in January and during the remainder of the season if the weather is favorable.—E. A. Beale, District Forecaster, San Francisco.

## WEATHER CONDITION

# We Give Away Shetland Ponies to Boys and Girls

Wouldn't you like to own this fine Shetland pony? California Cultivator is going to give away three fine Shetlands and many other valuable prizes including cash to boys and girls for Christmas presents, December 22, 1917. Send in your name and address so you can take part. You might just as well have one of these fine prizes as anyone.

Fill in and mail this blank:

California Cultivator, Los Angeles.

Please tell me how I can get one of the Shetland ponies you will give away.

My Name .....

My Address .....

My father's name .....

## ALMOST WEAR PROOF DISK HARROW BEARINGS

The loose, gritty, sandy soil of these Western States is hard on implement bearings, especially on ordinary disk harrow bearings which work close to the ground in a cloud of gritty dust that fairly eats them up. In Deering and McCormick bumper disk harrows, the bearings are built to last and give good service even under these extreme conditions. If sand and grit does get into these bearings, most of it will drop through before reaching the boxing itself.

The grit and dirt that does reach the boxing, instead of cutting it all to pieces and wearing it out fast, has no effect except to polish the oiled surfaces of the hard white iron spools and boxes and to make easier running bearings of them. If these bearings are oiled regularly through the hard oil cups in the weight boxes, there is no wear out to them; after months of use they show a surface as smooth and hard as glass.

Everything else about Deering and McCormick bumper disk harrows is built with as much care and thought as is given to the bearings. You can get information that will save you money, time and trouble by dropping a line to the nearest branch address below.

## The men who sold you your fruit trees say:

"Your trees must be planted *right* if they  
are to thrive. Make the holes deep and wide  
and break up the subsoil. The best way to do  
this is by blasting."

Nearly every Western nurseryman uses and  
recommends blasting for tree-planting. "We  
know the value of such work," say Fancher  
Creek Nurseries, California. "We favor blast-  
ing," says Oregon Nursery Co. "Blasting is  
important," says Puyallup Nursery, Washington.

Blast with

**GIANT FARM POWDERS**  
STUMPING — AGRICULTURAL

—which do their work cheaper and *better* than  
ordinary dynamites. These improved explosives  
—made in two brands, Eureka Stumping Powder  
and Giant Stumping Powder—are prepared es-  
pecially for Pacific Coast farm and orchard work.  
They pulverize the soil several feet deep and  
wide, and place it in the best condition to insure  
the rapid growth of trees and crops.

Be careful to get the genuine, made by the company which  
originated all "giant powders." If your dealer has only  
ordinary dynamites, write us and we will see that you are  
supplied with the *real* Giant Powders.

Get Some of These  
**Five Free Farm Books**

Get our valuable, illustrated books. They tell how to save  
money by using  
Giant Powders for Boulder Blasting, Stump Blasting and  
Ditching, how to grow bigger farm crops by blasting the sub-  
soil and how to blast in new or old orchards. Mark in coupon  
the subjects that interest you, and the books will be sent free.

## The big game gun of the world—

Winchester Model 95

The Winchester Model 95 is the ideal weapon for the seasoned, serious hunter. All the big game animals of the world, from the thick-skinned "Rhino" of the African Jungles to the snarling grizzly of the Canadian Rockies have gone down before it.

The Model 95 is a marvel of strength and simplicity,—easy to handle and to climb with, absolutely sure to work, even in a swearing hurry,—and absolutely fool-proof.

It will stand up under great abuse and even some neglect. Drop it on the ribs of the Rockies or lay it in the alkali dust of Arizona, this good reliable rifle will still shoot strong and true because it is a Winchester and built to do its work under all conditions and in all climates.

**The barrel is the gun**

Men who know guns realize that

the accuracy and durability of a rifle lie in the barrel. On the quality of the barrel depends the quality of the gun. There is absolutely no difference in the standard of quality of the barrels on the highest and lowest priced Winchester guns. With Winchester the barrel is the gun and the single standard of quality has been attained only by the most unremitting attention to the boring, finishing and testing of the barrel.

### The Winchester barrel

The barrel of the Winchester Model 95 has been bored to micrometer measurements for the cartridge it is meant to shoot. In rifling the barrel the exact twist that is necessary to produce the best results with a given cartridge has been mathematically calculated and is verified by exhaustive practical tests before leaving the factory.

A bullet fired from a Winchester barrel spins point on with unerring accuracy to the limit of its range. The nickel steel construction preserves the original accuracy forever.

The Bennett Process, used exclusively by Winchester, gives the Winchester barrel a distinctive

blue finish that, with proper care, will last a lifetime.

What  means

This mark on the barrel means *Viewed and Proved Winchester*. This stamp stands for Winchester's guarantee of quality, with 50 years of the best gun-making reputation behind it.

Every rifle that bears the name "Winchester" and that is marked with the Winchester Viewed and Proved stamp has been fired many times for smooth action and accuracy, and with excess loads for strength. At every stage of Winchester manufacture, machine production is supplemented by human craftsmanship. It is a *test and adjustment process*.

It is this thoughtful care in manufacturing that has produced in the Model 95 a rifle of unsurpassed game-getting qualities and that has made it the favorite with big-game hunters the world over.

**Write for details of Winchester rifles, shotguns and ammunition**

The Winchester catalog is an encyclopedia on rifles, shotguns and ammunition. Every hunter should have one. It gives detailed specifications of the Model 95 and describes at length the principles on which every one of the world-famous Winchester rifles and shotguns is built. Write today. We will mail you a copy free, postpaid.

WINCHESTER REPEATING ARMS CO.  
Dept. XX-4  
New Haven, Conn.

MODEL 92—Lever Action Repeating rifle, solid frame or take-down, 24-inch barrel. Made for .44, .38, .32 and .25-20 Winchester cartridges. The most successful rifle ever made handling these popular sizes of cartridges.

MODEL 94—Lever Action Repeating rifle, solid frame or take-down, 26-inch barrel. Made for .25-35, .30 Winchester, .32 Winchester Special, .32-40 and .38-55 cartridges.

MODEL 97—Hammerless, Take-down, Self-loading rifle, 20-inch barrel. This is the world famous .361 Self-loader, shooting only its own .361 caliber Winchester cartridge. The favorite weapon of the modern hunter.

MODEL 10—Hammerless Take-down Self-loading rifle. Shoots only its own Winchester .401 caliber cartridge. No rifle made equals the Model 10 for delivering five as powerful blows in as few seconds.

## Serious Fungous Trouble in Onion Fields

Black Mold Prevailing in Some Eastern Truck Farming Sections Discovered in San Fernando Valley, Los Angeles County. Sanitation and Cleaning Up Necessary

**O**NIONS infected with a black fungus growth were recently brought to the Cultivator office by H. M. Starr, an onion and garlic producer of the San Fernando Valley. Mr. Starr had endeavored to secure information as to whether this was a serious pest of the onion. The onion had been submitted to an expert and one or two had suggested that it was a common smut. The Cultivator sent the specimens which were left here to the Laboratory of Plant Pathology at Washington, and Lucia McCulloch, assistant pathologist, suggests that the fungus may be *Sterigmatocystis nigra* and closely related to the ordinary molds of bread and canned goods. However, the writer stated that the onions had been referred to other experts, and we later received a letter from H. A. Edson, pathologist in charge of truck and forage crop disease investigation, giving the information that this disease was not smut and stating that the principal injury to the onions occurs in storage. Mr. Edson added "the Ohio agricultural experiment station is now working on this problem. They have recently published a bulletin on its occurrence in Ohio and neighboring states, and have recommended measures for its control. The control measures consist of seed treatment with formalin at the proportion of one pint to 30 gallons of water. This treatment is of double value in that it is also effective against onion smut. In addition to seed treatment, general sanitary measures in the field are followed, consisting of the destruction of diseased plants and plant parts." Mr. Edson then referred the matter to Wayne Van Pelt, assistant botanist, Ohio agricultural experiment station, Wooster. Mr. Van Pelt writes "This black mold disease has been noticed on onions in this state only within the past two seasons. As yet we have not fully completed our results on control measures. However, I am enclosing an article which we published in our May, 1917, Monthly Bulletin, and trust it will give you some idea of our experience with the disease up to that time. General sanitation measures, such as cleaning up all dead and diseased parts in field and storage houses, will probably need to be strongly advocated."

Also quoting from No. 5 of Volume of the Monthly Bulletin of the Ohio station, we have the following regarding "Black Mold of Onions, a new Fungous Disease Causing Serious Damage in Storage Houses." This is written by Mr. Van Pelt, and we quote in full, also giving one illustration on this page from the same bulletin. Specimens of the California onions have also been sent to Mr. Van Pelt, and we hope to hear more specifically later.

### Black Mold of Onions

From inquiries and reports on onion diseases, to the experiment station during the last season, important re-

Black Mold of Onions

Several white onions diseased with black mold, and at the right below, a red onion infected with the same disease. The contrast is clearest on white varieties, although other sorts are likewise ruined by this mold. The earlier, small molded areas show rupture of the cuticle and production of spores; later the decay of the several layers within is indicated by the shriveling of the exterior.

sults of the work of a new black mold on onions, caused by the fungus *Aspergillus niger*, have been observed. This disease has become of general economic importance to growers and storage men of this State only within the season of 1916. The prevalence of this disease on storage onions from certain localities of Ohio, as well as from Virginia, has prompted us to car-

ry out certain experiments and collect notes for publication.

In general, the appearance of this disease of onions resembles closely that of onion smut, and those who are not familiar with the microscopic characteristics will be unable to distinguish between the two. The experiment station will gladly assist in identifying these diseases upon the receipt of liberal specimens.

## Tractor and Implement Demonstration

Santa Clara Valley is Site of Demonstration Which Gave Information to Thousands of Producers as to Hooverizing. Use More Farm Power and Labor Saving Implements

Written for California Cultivator By Leroy Anderson

HE Santa Clara Valley tractor and implement dealers laid the foundation for a bigger show than they anticipated when they planned the demonstration of power farming machinery for November 1, 2 and 3. Their fondest expectations as to attendance and interest were more than realized. That they had faith is evidenced by the size of the tract selected, which was 60 or more acres, and the size of the exhibition tent, which was 85 by 310 feet. As one approached the field he was in doubt whether a huge fair or a circus was being pulled off, and when he arrived he was satisfied to call it either or both. The tent was well filled with idle tractors, machinery for tractors or horses, spraying implements, pumps, motor fuel and lubricants.

The open field had been divided into nine or ten portions and each portion assigned to a tractor. In addition to this an adjoining orchard of ten acres was secured on the second day and most of the tractors preempted a "land" or two to show what they could do amongst trees. In fact a tractor or its plow that cannot negotiate trees is of little use in the Santa Clara Valley. Actual tractor work was confined chiefly to the after-

noons when the largest number of visitors was present. Each machine was kept busy to satisfy the demand of the many men who desired to see what each could do, and long before closing hour of the last day the entire field had been plowed. It was a barley stubble and now it is ready to sow again.

The genial citizen who engineered the auto parking said there were 800 autos on the grounds the first day, and the daily press said there were 5000 people. The second day brought a large attendance, and the last day, Saturday, the biggest of all. So it may not be stretching the case to say that 20,000 people visited the show. And they were not city folk out for curiosity; the great majority were farmers, each endeavoring to see which tractor would be best for his use, even if he could not buy right away. So it was a crowd with a purpose and withal a most jovial crowd.

This demonstration shows that Santa Clara Valley can stage as good a power farming exhibit as any other part of the state. It shows that farmers are thinking more and more seriously of the need of mechanical power on their farms. The extremely high price does not deter men from

### Description of Black Mold

Species of this family frequently infest several different, common hosts; namely, bread, decayed and preserved fruits and vegetables. The first appearance, as noted on germinating onion seed, is a white, flocculent mass of threadwork. On neutral glucose agar, as well as on the onion sets and bulbs, the infested areas are first of a light brownish color, soon turning to a dark brown color. The general appearance of the disease, and type of growth are well illustrated by the accompanying figure. The dark areas, consisting of microscopic conidia, or spores, usually appear in the earlier stage as small, circular spots scattered about a portion of the onion, generally about the upper half. As the small areas develop, gradually there is being formed a single large, diseased mass which often involves the greater part of the onion layers. As shown in the figure, the infection usually starts about the upper portion of the onion, thus indicating that the spores gain entrance about the ragged and torn tops and then gradually develop downward between the layers of the onion. It has also been noted that spore entrance has been gained through cut and bruised places made when the onions are pulled and when handled from place to place, especially in storage and commission houses. The Spanish, or large white onion, when seriously infected with this disease is quite objectionable for sale.

The work of the disease causes the outer layers of the onion bulb to wrinkle and become dry, which, together with the dark spots covering the surface, leaves it almost worthless. This condition, however, is rarely found except on onions which have been in storage under prevailing conditions.

The injury to the young growing onion seems to be of no particular importance. The organism at this time appears to survive as a saprophyte (that is, lives on dead or decaying organic matter) on the dead layers of the original bulb.

The spores of this disease cannot be seen except by the aid of a compound microscope. They are of a dark brown color, spherical in shape, with minutely verrucose or warty outer wall. As has been stated, they live on the dead organic matter of the field; thus, when the onions are pulled a number of spores are left clinging to the new bulb. As soon as the onions are placed under favorable conditions for spore germination, as is found in many storage houses, these spores start to break down the organic substances of the onion, especially the carbohydrates. This work in a short time nearly decomposes the whole onion.

From an examination of a number of samples of onion seed it was found that a large percentage of the seeds were carrying these spores. After a number of these samples of seeds were placed under germination condi-

## Autumn in the Orange Orchard

By William M. Bristol

WHEN the corn grower has cultivated his fields for the last time and nothing more remains to be done for the growing crop he says that his corn is "laid by." I have heard the same expression used in connection with the orange crop; and I do not know that a better term can be found to designate that condition which should exist, when, about the first of October, cultivation is ended, the winter cover crop is sowed and nothing remains to be done except to irrigate when necessary — and wait for the fruit to mature.

It is now too late to advise concerning the cover crop for this season. In fact it would seem as if the subject of winter cover crops were threadbare, in spite of the fact that many orchard owners still neglect to grow them. Just a few hours ago I walked through an orange orchard whose trees were almost crying aloud for humus, yet no cover crop had been planted or planned for. In fact, the ground had been

freshly cultivated so that any indigenous plants that might have been started by the last irrigation were thoroughly eradicated.

If it be asked how I know that those trees need humus my answer is that their sparse foliage of a pale green cast indicates it. It is true that they are on a rather loose gravelly soil deficient in clay and therefore likely to be depleted of its nitrogen by leaching; but a neighboring

orchard on similar soil, and which has had both cover crops and stable manure, has foliage both dense and dark. The contrast between the two orchards is so marked that it amounts to a demonstration of the effect of abundant humus.

The need of rotation of crops in ordinary farming has long since been accepted as proven. A moment's reflection should show that some semblance of rotation should be practiced in an orchard, and I know of no nearer possible approach thereto than the growing of some annual leguminous crop therein. The hypothesis that each crop, in the act of growing, impregnates the soil with poisons interfering with the continued reproduction of that same crop, may or may not be correct. In Will Carlton's poem entitled "Betsy and I are Out" it is related that, in spite of the prolonged controversy as to how it happened, the fact of the cow's death was accepted by both the old farmer and his wife. Rotation of crops being accepted as beneficial, it would seem that the wisest thing is to rotate, and if for any reason a leguminous crop cannot be grown, then, for the love of humus, sow barley or some other cereal, for the cereals will doubtless eat up the toxins thrown off by the citrus trees as thoroughly as legumes and will at the same time make humus. This is not an argument for cereal cover crops as a regular practice for they are much more difficult to turn under than legumes and are not believed to add to the nitrogen content of the soil as do the legumes.

It is not strange, perhaps, that one who believes as firmly as do I in cover crops should have convictions that differ from those of some of his fellow orchardists, and even from those of the fellows who answer the questions sent in to the editors of the horticultural journals. Speaking from both experience and observation my present belief is that a cover crop sowed in the fall and permitted to grow until the first of May costs less and is worth more than two crops a year partially matured. I was told recently of a man who had been growing both a winter and a summer crop with practically no time intervening between them. He had plenty of water and both crops grew finely—but he frankly admitted, the trees were not looking well. It seems reasonable that from the first of May to the middle of September the trees and their fruit should have a monopoly of the available plant food in the soil and the moisture also. In my own orchard the single cover crop plan has given such excellent results that the controversy seems permanently settled. Of course when trees are young, water plentiful and bean prices high, it is good practice to grow beans; and would vastly rather have two cover crops per year than none at all.

If an orchard is on sloping ground—as many of the best citrus orchards are—the need of a cover crop for protection against erosion during rains is imperative. On my own place on the East Highlands mesa there is a slope of 200 feet in the half mile. The complete system of paved waste ditches could not collect or carry the water which sometimes falls, however were it not for the cover crop, which except in case of a very heavy down-pour, practically prevents any run-off, and the only thing that ever tempts me to grow a summer crop in these side-hill orchards is the abnormal summer cloudburst which comes about once in a decade. To guard against this disaster I am planning to plant

Cover Crops in Big Seedling Orchard  
Cover crops will grow even where shade is dense.

### Thirty-five Years of Experience Behind "Caterpillar" Tractor Construction

Always the right material in the right place—that is one reason for "Caterpillar" Tractor superiority, developed by thirty-five years of Holt experience. Some parts of the Tractor must be hard-surfaced, to resist wear. Other parts must be tough, to withstand vibration, or must possess other special qualities. Holt experience of three and a half decades has given the expert knowledge of design and construction that makes the "Caterpillar" Tractor the longest-lived, most efficient tractor built.

Efficiency, low operating expense, low upkeep costs—these "Caterpillar" Tractor features bring bigger profits to "Caterpillar" Tractor owners. The "Caterpillar" Tractor is a tractor service—built for service, backed by service. The investment in such a machine pays liberal returns.

Complete information concerning the "Caterpillar" Tractor sent on request.

on the steepest slopes next spring every third or fourth land to mellilotus alba, the summer-growing white sweet clover. It goes without saying that an orchard in which a cover crop is planted should be furrowed for irrigation — and for storm-water if upon steeply sloping ground.

Vast sums of money are expended every summer in protecting our mountain slopes against fire and hence against the erosion which inevitably follows denudation. I cannot understand why every orchardist should not preserve his valuable soil by protecting it against erosion through the medium of a cover crop. And, having gone to the trouble of sowing and growing a cover crop, I believe it to be wise to let it at least approach maturity for the sake of the greater root penetration and consequent loosening of the soil, as well as for the sake of the greater amount of humus gained.

Recently I saw a man who has an orchard of two year old trees industriously hoeing out and burning the tumble weeds which had escaped the cultivator during the summer. At the same time he was overlooking and leaving patches of devil grass that had started in three rows and along the line. He spent a week at the job — in other words, \$15 worth of labor. He turned about two tons of dry weeds, which, at the present price of almost any kind of straw, were worth \$20. The weeds had completed their growth and were taking nothing more from the soil. The logical thing, in order to return to the soil the nitrogen they had taken from it, was to let them rot where they had grown. A shovel of earth thrown on each one would have prevented it from being blown away and would have cost far less than the burning. I shall not write what I thought of his logic — or lack of it.

Excepting for the sake of comparison I presume the no-cover-crop experiments at the experiment stations could be abandoned; for they are on par with experimenting to see what citrus orchard will do without irrigation — and no one in California voluntarily tries that.

Reverting to my text, "Autumn in

the Orange Orchard," it is timely to observe that this season of scant crops affords an excellent opportunity for pruning. All wood which would have borne for the last time this year should come out, and in most inland orchards there are not enough oranges to delay decision on the part of the pruner as to where and how to use his saw. At the risk of making this article a record of personal procedure I am going to tell what becomes of the brush removed from orange trees on the Wayup Ranch. It has always seemed illogical to me to spend time and money in hauling out and burning any organic matter that can be returned to the soil. Immediately upon removal from the tree all wood exceeding one-half inch in diameter is stripped of smaller brush and goes to the domestic wood-shed. The trimmings are left under the tree until the following summer. They are then raked out and chewed up by a heavily weighted disk harrow from which alternate disks have been removed to give greater efficiency to the remainder. The work involved in this method of disposing of prunings is no greater than that required in hauling out and burning, so the organic matter saved is a net gain. If any one charges me with being a regular humus miser I shall not deny the charge. Somewhere I have read that an Irish peasant picks up every particle of fertilizer he finds on the highway. Of course the dignified California orange grower cannot stoop to that, but the mean little economies he can practice when and where no one is looking will be necessary if his industry is to be permanently prosperous.

"Autumn in the Orange Orchard" ought to be a paradox for the California orange grower; that is, autumn ought to release the grower from his orchard and send him on a vacation trip to become better acquainted with the marvelous state in which he lives. Our modern highways are a delight in themselves; and I know from experience that if he travels with his eyes and his ears open he will not only find recreation but will gain knowledge that will offset the monetary cost of the trip.

## Chemical and Physical Value of Mulches

IN answering a question as to value of stable manure and of straw the Cultivator said some months ago:

It is impossible to tell value of stable manure which you are buying without knowledge of the feed of the stock which produces it. The value of plant food in a ton of average manure, according to Van Slyke, is about \$2.50 for horse, \$2.20 for cow, \$2.00 for pig, \$3.20 for sheep, \$2.35 for deer and \$4.40 for hen. Note we say average manure." Where a horse is fed on grain and the bedding is so arranged as to absorb much of the liquid which manure has greater value. We are not able to turn to values of barley straw. Oat straw is quoted by Hopkins as having a value of \$3.30, wheat straw \$2.58. This would make appear that \$7.50 per ton for barley straw would be higher than could be paid economically, but it must be borne in mind that the figures given are based on plant food value without any reference to mulching and humus value. There is much more humus forming material in a ton of dry straw than there is in a ton of stable manure saturated with liquid. The value of bean straw is of course much greater than barley because of its higher nitrogen content. Its value on an analysis standpoint would possibly reach eight or nine dollars. Now come other questions along

this same line so we give information brought out at the time of the former quotation because of statement in another paper that the above figures were in error, that barley straw was of greater value. Correspondence was taken up with Prof. Lipman and others of the University of California. Prof. Lipman wrote:

I want to say that the misunderstanding is evidently based on an incorrect interpretation of the data submitted by Mr. Hendry. In accordance with the figures published as received from Mr. Hendry, it is true that barley hay shows a higher feeding value and probably also a higher fertilizer value, by implication, than the lima bean straw. That, however, if you will think for a minute, is merely due to the fact that the seed of the barley or the grain is included with the straw and that naturally raises very greatly the percentage of protein and fat as well as carbohydrates present in the barley hay. If, however, the barley straw is compared with lima bean straw there is no question at all of the superiority of lima bean straw. That is particularly so in the case of fertilizer values of these materials, since if either was used for fertilizers it would be used in the form of straw and not in the form of hay. You are therefore correct in your contention that the lima bean

## The Tractor Disk That Stands Up!

Why waste your tractor power pulling a poor disk? No disk should be run behind a tractor unless it is built especially for that kind of work. It must do equally well after the plow or on stubble. The leader for a dozen years is the

### Cutaway Tractor Disk Harrow

Built extra strong, with heavy disks forged sharp. Rigid frame does the work in once over, avoids packing. Two levers control all gangs. Adjustable hitch. Light draft. Sizes for all tractors, light or heavy.

GRAIN DRILL

FERTILIZER DRILL

When writing advertisers, mention The Cultivator.

straw is a better material as a fertilizing material than the barley straw, but not correct in the statement that the lima bean straw is a better material for feeding purposes or for fertilizer purposes than the barley hay.

As to blackeye straw Prof. Lipman also wrote:

I beg to inform you that the analysis of blackeye bean straw, which of course is very similar to that of cow pea hay, since blackeye beans are one variety of cow peas, is as follows: Water 10.95, ash, 8.40, nitrogen 1.95, phosphoric acid .52, potash 1.47.

According to present prices of potash and present prices of nitrogen, this material should be worth approximately \$15 per ton, (those figures are based on pre-war prices. They are now very much higher) but of course both nitrogen and potash prices are decidedly abnormal at this time owing to the European war, and hence the normal price of this material would probably be nearer \$6.00 or \$7.00 than \$15 per ton. Even then it must not be forgotten that the valuation of fertility constituents in hay, straw and green plants by our present fertilizer standards are most arbitrary and totally unjustified by the actual service, so far as we know it, that is rendered by the constituents in question, to soils to which they are applied. Obviously the question of availability comes in which may make more valuable or less valuable the constituents in question in the case of straw than in the case of commercial fertilizers.

We have little evidence upon which to make any definite statements with reference to these matters. In gen-

eral, of course, it is safe to assume that hay, straw and green stuff from leguminous plants are far more valuable than similar materials from non-leguminous plants even if judged purely from the viewpoint of their nitrogen, phosphoric acid and potash content. Therefore, bean straw and alfalfa hay will have greater value than barley, wheat or oat straw for possible fertilizer purposes.

Nevertheless, it should always be remembered that the value of these materials as mulches throws in to the background all manurial value which they may possess, especially as to the circumstances obtaining today in the lands of the hot interior valleys. In the light of what we know of the subject, therefore, I would advise people to pay a little more attention to the fertilizer value of mulching material when considering the general question of the profitability of mulching.

I feel strongly, that it is high time as I have often stated in public, that we give less attention to ultimate chemical compositions of things and more to their important effects which they are responsible in our soil fertility problems.

#### Analysis

P. L. Hibbard, also of the state university, sends analysis of lima bean and lima bean straw:

Lima beans—Total phosphoric acid 0.80, total nitrogen 3.07, total potash 1.94.

Lima bean straw—Total phosphoric acid 0.30, total nitrogen 1.37, total potash 1.57.

## Fruit Growers Convention

THE fruit growers of California will hold their fiftieth convention in the Senate Chamber, Capitol Building, at Sacramento, November 21 to November 23, which will be attended in a body by the county horticultural commissioners, who will also meet during the same week.

#### Program

Wednesday, November 21, 9:30 a. m.—Welcoming addresses; Annual report, G. H. Hecke, State Commissioner of Horticulture; Progressive Action by Agricultural Organizations—State Agricultural Society, John H. Perry, State Viticultural Commission, E. M. Sheehan, California Fruit Distributors, Chas. E. Virden, California Fruit Exchange, G. H. Cutter, California Associated Raisin Company, R. L. Payne, California Fruit Growers' Exchange, E. G. Dezell, Almond Growers' Exchange, T. C. Tucker, Walnut Growers' Association, Carlyle Thorpe, Farmers' Protective League, C. A. Bodwell, California Association of Nurserymen, Max J. Crow.

1:30 p. m.—Report of Committee on Deciduous Root Stocks, H. P. Stabler; Deciduous Root Stocks, Dr. W. L. Howard and A. L. Wisker; Better Fruits, Dr. H. J. Webber; California Soils and Cover Crops, Prof. W. M. Mertz, C. V. Freed, A. B. Humphrey, H. E. Pennywell.

7:30 p. m.—California Standardized Fruits and the Auction Market, Frank P. Ripley, Wm. Sproule, Geo. W. Ashley, Alden Anderson, Col. J. P. Irish, B. B. Meek.

Thursday, 9:30 a. m.—Have we reached the Limit of Profitable Orchard and Vineyard Planting?, H. C. Dunlap; Report on Cooperative Marketing, Prune and Apricot Growers' Association, F. M. Coleman, Pear Growers' Association, F. T. Sweet; Peach Growers' Association, J. F. Niswander; California Associated Olive Growers' J. C. Martin, Jr., Central California Berry Growers, Mark Grimes; Necessity, Importance and Wisdom of Farmers' Cooperative Marketing, Col. Harris Weinstock.

Thursday afternoon—Excursion to university farm, Davis. Tractor demonstration by Prof. J. B. Davidson; Statement of Horticultural Experiments now under way at the University Farm Orchards, W. L. Howard; Auto Sight-seeing trip over the farm; Statement of Purpose of the University Farm School, Dean H. E. Van Norman; Public Speaking Contest by three students.

730 p. m.—The Russian Situation, Major Stanley Washburn.

Friday, 9:30 a. m.—Address by C. C. Teague; Labor Problems of the Past Season, D. O. Lively; Development of New Labor During the War, M. F. Tarpey; Agricultural Labor Problem and the Draft, A. L. Wisker; Farmers' Union represented in discussion by D. M. Utter; Report of Agricultural Labor Committee, A. L. Wisker, Senator W. F. Chandler, Peter Cook, P. H. Davis, J. T. Lindley, E. W. Wylie.

1:30 p. m.—Housing, Treatment and Methods of Increasing the Stability of White Labor, Philip Baier; Compulsory Labor Laws of Maryland and West Virginia and their Application to California Conditions, Robert Devlin.

6:30 p. m.—Banquet. Address by E. J. Wickson, Robert Devlin, Marshal DeMott, A. H. Naftzger.

#### SHORT APPLE CROP

Western New York reports only about 15 per cent of a crop of apples. In 1916 the state produced almost a third of the total commercial barreled apples of the United States. This year's total will be nearly 4,000,000 barrels decrease from that of last year. New England states show a decrease of over 800,000 barrels. Pennsylvania's crop will be about 50 per cent of that of last year. Ohio's total will be only about 36 per cent. Missouri, Arkansas and other central states in some sections show increase over last year but in general perhaps not more than 68 per cent. Michigan's decrease is almost 800,000 barrels. It has only about 25 per cent of a full crop. On the other hand Illinois and Indiana show increase over crops of last year. One statement issued by the department says that it will be 49 per cent more than the 1916 crop. The immense output of the state of Washington puts it into the position of being the largest commercial apple producing state of the Union this year. The Wenatchee and Yakima sections alone will have an output of about 17,500 carloads. Great embarrassment obtains because of shortage of box material. Oregon will produce about 20 per cent less than in 1916. Colorado shows immense increase over 1916, estimated as high as 67 per cent. As to California, the department report says: "The Watsonville district is estimated with nearly a full crop, or about 4000 cars, the bulk of the California crop. Varieties here are chiefly Bellflower and Newton Pippin. Taken with the Sebastopol Gravenstein section the California state figure shows a one per cent increase over last year. A large portion of the apple crop will be used for drying."

BLACK MOLD OF ONIONS

Continued from Page 491

tions, it was observed that in several samples as high as 50 per cent of the seedlings were destroyed. The spores attacked the tender sprouts soon after germination and completely decomposed the new growth.

Occurrence

Within the last season specimens of onions affected with the black mold disease have been sent in from two localities outside Ohio. The first specimens received were sent in by Paul Hayhurst, Sabot, Virginia. Soon afterword onion sets were received from a seed company in Chicago, and found to be affected with the same disease.

Control

As to control measures for the black mold disease, the formalin solution has proved the most effective and practical, together with general sanitation methods, as the cleaning up of old onion tops and litter about the fields. Tests made with commercial formalin solution, of a strength of one pound or pint of formalin to 25 to 33 gallons of water, applied to the infected seed, prove this to be of sufficient strength to control the disease. As this same treatment is part of the control measures for onion smut, the two diseases may be destroyed by the one treatment.

This strength of formalin solution is made up in small quantities by mixing one ounce of formalin (40 percent pure) with two gallons of water. When treating seed that is to be grown in fields which have been previously sown to onions the formalin solution should be applied by the drip attachment to the seed and soil when onion seed is sown. This is the recommendation given for the control of onion smut, for the soil, when treated with formalin solution in this manner, is kept sterile until the onion has started good growth and is able to resist the attack of the smut spores.

As *Aspergillus niger* is not such an active parasite under general soil conditions at this time, the bother of attaching a drip tube to the onion seed, as for the treatment of onion smut, can possibly be avoided, especially if there is or has been no evidence of the disease in the soil. The fields require to be thoroughly cleaned of old onion tops, rotted onions and other litter, the crates to be disinfected by dipping in formalin solution of about the same strength as for oat smut treatment, or by fumigation, and the seed treated before being sown. This would consist in applying the formalin solution to the seed with a sprinkling can, or other similar device, in such a way that the seed will be thoroughly moistened with the solution, then spread out so that the seed will gradually dry. While this method can probably be safely used where there has been no previous evidence of black mold in the soil, the more thorough and efficient method will be to apply the formalin drip solution to the seed and soil, as recommended for the control of onion smut.

The drip attachment as used for onion smut treatment consists of an ordinary tin vessel or old syrup can with perforated bottom and tube to carry the solution forward to drop with the seed. It is advised to apply about 500 to 700 gallons of solution to the acre. This treatment has been efficiently established among onion growers for smut control to warrant its general use on soils infested with black mold.

Methods of treatment for onion sets have yet to be determined. It may be possible to use the same formalin solution described for onion seed treatment; immersion of the onion sets in this solution for five or six hours previous to planting may prove effective to destroy the black mold. Experiments are being made to ascertain the most effective and practical dip for onion sets.

Onion growers and commission men may not escape damages resulting from careless and insanitary practices. Better measures in the field alone are not enough if crates or bags, storage houses, etc., are left reeking with spores of this mold fungus. General measures with fire and disinfecting agents are indicated as necessary wherever the crop has become attacked by the *Aspergillus*.

# PAIGE

*The Most Beautiful Car in America*

## Economy Means Quality—Not Price

There are many cars that sell for less money than the Paige. We could readily build them ourselves if we considered that policy the best one. But we don't.

We firmly believe that Self-Respect, Comfort and Enduring Satisfaction have an actual market value. So we build those things into our product.

We take just a little more time—just a little more care in selecting materials—just a little more pride in our work. And the result is a real motor car—not a make-shift or compromise.

Unless we are greatly mistaken, the Paige "Six-39" is just the kind of a car that you want. It costs \$1330 and it is worth every cent of the price.

If you are truly Economical—truly wise and careful—it will be the car of your choice.

Essex "Six-55" 7-passenger \$1775; Brooklands 4-passenger \$1795; Linwood "Six-39" 5-passenger \$1330; Glendale "Six-39" Chummy Roadster \$1330; Dartmoor "Six-39" 2 or 3-passenger \$1330. All Prices f. o. b. Detroit. No handsomer line of enclosed vehicles can be found on the market.

PAIGE-DETROIT MOTOR CAR COMPANY  
242 McKinstry Avenue, Detroit, Michigan

## Heavy Double Tractor Discs

**KILLEFER  
QUALITY**

**KILLEFER  
EFFICIENCY**

Our Engine Discs are built in sizes from five to twelve feet in width. The Discs are made extra heavy for this class of work and are stronger than anything obtainable on the market. The arbor bolts are large and all castings are made heavier in proportion to stand the extreme strain required of the Tractor Tools. The discs are equipped with weight boxes to give the necessary weight to insure the proper penetration on different character of soil. The pitch of the disc is controlled by connecting arms bolted solidly in place, but which can be changed to any pitch desired within a radius of fifteen degrees.

## Garden and Plant Notes

Written for California Cultivator By Ernest Braünton

IT IS doubtful if there is anything more curious or uncanny than the carnivorous or flesh-eating plants that live, in part at least, on insects, meat, or almost any succulent organic food that is given them. It is said that a scientist once experimented with this class of plants, feeding them on various sorts of food, with great success. One day he gave each a large amount of fresh cheese, when all were seized with an acute attack of indigestion and died, some of them in convulsions. We do not, however, vouch for the truth of this story, and as the scientist is said to have died of grief after seeing the horrible sufferings he brought upon the innocent plants, we have no authentic means of verification.

As we have a reputation to sustain we will confine ourselves to known facts. In California we have two distinct and odd species of insect-devouring plants. *Drosera rotundifolia*, the

sundew, has a very wide range and is found from the Atlantic to the Pacific by way of the Gulf states and is also native to Europe. There are about 90 species throughout the world, though most abundant in Australia. The sundew is not found in the southern half of California.

The leaves are nearly circular in outline and covered with fine bristly hairs that excrete a viscid fluid which aids in holding the victims first caught by the infolding and grasping hairs. When an insect alights or falls upon a leaf the hairs bend inward toward the leaf-center, the exuding fluid becomes acid and at once begins to absorb or digest the flesh for the plant's nutrition. Raw meat is immediately strongly clasped and retained by the leaves until all is absorbed, but when dry wood, chalk, lumps of earth, or stone are used, no movement is visible. Bits of raw fruits excite the plant but little, showing that animal food is much preferred.

*Darlingtonia Californica* is a more attractive, interesting and beautiful plant and still more curious, also of much greater size. The rosette of leaves, each one of which is a tubular pitcher, often attains a considerable size. These pitcher-like leaves are in some vigorous specimens more than two feet high and three inches in diameter. While the tubes are green, the mouth is nearly white, and from the latter there hangs a tongue of forked form that suggests the tongue of a snake and is quite attractive in red and green. This tongue and the hood above, which is suggestive of a snake's head, bear many honey glands, attract insects toward the yawning mouth from which no victims are return to tell of the fatal journey. The mouth proper is smooth and well lighted through whitish translucent mottlings of the hood above. Insects step upon this smooth and slippery surface, their heels fly up and down the toboggan they go. The throat is filled with bristly hairs that are directed downward so that victims once caught cannot escape. Down they go until they tumble into the melting pot below where the liquid soon disin-

tegrates them and they are absorbed by the walls of the pitcher-like leaves. In midsummer some of the large pitchers are filled to the depth of a foot by a mass of insect-remains, a veritable graveyard of bugs and bees, worms, slugs, centipedes, etc. Many other insectivorous plants are found in the Eastern states.

### Montana Bitter-root

*Lewisia rediviva* is the name of the plant known by the common local name of bitter-sweet, the flower of which is the floral emblem of Montana. The generic name, *Lewisia*, was given in honor of Captain Meriwether Lewis, of the Lewis and Clark expedition. The specific name, *rediviva*, was given because of the plant's power to revive after months of drouth. The plant will also revive and open its flowers when placed in water after having been uprooted for several days. The *Lewisia* is quite variable and has an extensive range. In fact it gave its name to the Bitter-root Mountains in Montana and with some variations reaches into the Yosemite Valley region of California where it is listed as the variety *yo-semitana*. It belongs to the portulaca or purslane family and is a truly beautiful flower of waxy pink.

### Ornamental Loquats

Now that fruits and all food stuffs are high in price and we are "adjured" to curb the cost of living, let us again consider what I long have preached—the use of economic evergreen trees for embellishment of home grounds. I have constantly and persistently advocated this class of plants for decoration of the home grounds—all down the list, from the grand magnolia-like avocado to the lowly carissa. Let us not forget the loquats whether budded or seedlings. Plant a group of them in natural positions. Not all need be of one variety. Use a Premier, an Early Red, a Red June, a Champagne, and a seedling. A group of five would be a fine one for appearance and one deeply appreciated after coming into bearing. Shall a tree be considered less beautiful because it bears an edible or useful fruit?

### General Fremont's Shrub

*Fremontia Californica* is a fine garden shrub and needs no pampering, coddling, or special care at any time. On the contrary it thrives best as a rule when it receives little attention. It is hardy throughout California and thrives in little or poor soil yet will amply repay a little ordinary garden care. It is still a rare plant in cultivation, though why I cannot say. For motorists returning from mountain trips frequently bring in flowering sprays for identification and are unanimous in declaring the shrub to be the most floriferous of all shrubs seen during the trip. Surely such plants are worthy of a place in the best of gardens.

### Graduated Planting

Nearly all deep borders are too nicely graduated in planting, with the result that they lack character. The taller plants, it is true, should be at the rear, but to show their character a bold clump should occasionally fall out into the lines of lowlier plants and should be flanked on either side by lower plants so that the full form and habit stands out in strong contrast to its surroundings. If this is not done what need is there of tall plants? Why not have a sloping bank whereon all the plants are of a height. Or place potted plants on graduated seats such as found in all grandstands and bleachers. To be short, if plants are tall, let their tallness be plainly apparent. And this cannot be accomplished

on your Coat

Reg. U. S. Pat. Off.

# Raynster

Reg. U. S. Pat. Off.

The hustle and bustle of farm and freight station never stop for rain. Men must be outdoors in the worst of weather.

But—Raynsters have come to rob rain of its annoyances.

This new word "Raynster" is the name of the United States Rubber Company's entire line of weatherproof clothing. And to make sure that you get a Raynster when you buy, each coat is labeled.

The Raynster label is your assurance that you are getting a waterproof coat that is serviceable and comfortable and made of the best of materials. Buy by this label—it's your protection.

These practical storm-coats are made with ample room to work. They're made strong and durable. They're made to fit every purpose and person.

Raynsters are of so many different styles and kinds that to say these storm-coats are obtainable to fit the needs of all men, women, boys and girls just starts to tell the story.

Stop at your dealer's and you'll learn the rest about Raynsters. And if you do, it's ten to one you take one home.

Send a postal today for interesting book of styles. It shows Raynsters for men, women and children.

## United States Rubber Company

Clothing Division, New York and Boston

except by contrast. Therefore let your planting be bold in character rather than tame.

#### Wild Gardens

Wild gardens should be as informal in all ways as it is possible to have without giving the whole the appearance of abandonment. A wild-flower garden (or a garden of wild flowers) is not necessarily a wild garden proper. The latter should have as a site a broken topography and if a canyon or ravine runs through it so much the better. Perfectly flat and smooth stretches are never good locations for natural displays. In Exposition Park in Los Angeles there is annually a fine display of wild flowers, with groups of native trees and shrubs, but the site is a very "tame" one and the whole thing looks out of place as it is located in the midst of city life where all just view, no matter from what direction one looks, a background of buildings and other evidences of civilization. A wild flower garden should be isolated and secluded.

#### Too Much Backyard

In planting new places avoid locating the house too close to the highway. In rural districts no excuse exists for such mistake for there are no precedents that one need to follow. The large backyard may give more privacy and usually gives more privations as well. Too much privacy is in a majority of cases a detriment for we do not all keep attractive those parts which all cannot see. Too much that unsightly soon accumulates where the backyard is roomy. Have a wealth of lawn in front—it adds much to beauty—it smacks of generosity and gives much of privacy, and privacy of

the entire home is quite preferable to the privacy of a backyard even though the latter be well planned and well kept.

#### Raise the Local Standard

Few things are more elevating to a community than neat, clean, well-arranged and well-planted home grounds. They are a decided uplift and a valuable asset. In kept and untidy grounds, on the other hand, so far from being an asset, are a liability. The effect of and influence of beautifying and cleanliness are almost magical in attracting visitors and home-seekers and home makers, and where the standard is already high there will flock those who will at once raise it still higher. Efforts of this kind are never lost and cannot fail to arouse in the minds of all the desire to do better. Are you doing your share, or are you a slacker?

#### Lime the Garden

Someone writes to ask how much lime should be incorporated into a heavy clayey garden soil. My experience would lead me to say at random: "All you can get." In my garden the top foot of soil is underlaid by a clay subsoil that at a depth of three feet is a finer material for bricks than ever was put into a brick in the city of Los Angeles. Where deeply and thoroughly dug up so that the top four feet was well mixed, that soil is best where the greater amount of lime has been applied annually for eight years. The most unproductive soil and the one in poorest physical condition is where the least lime is used. What amount to use is an open question. In clay soils you will not use too much.

## Celery Production of California

By R. G. Risser, Assistant Truck Crop Specialist for the Pacific Coast

**S**HIPMENTS of celery from California for the season 1916-17 were cut down materially in the northern portion of the state by repeated freezes. Over a large area where actual records of production are available the yield per acre was 79 crates in 1916-17 and 130 crates in 1915-16. Before the freezes occurred the cars averaged approximately 1100 dozen per car against 1500 dozen per car after the freezes. Besides reducing the size and weight of the celery, the freezes rendered much of the late celery in the northern portion of the state unfit for shipment, and a large area was never harvested.

Providing that there is not a repetition of this abnormal weather, shipments should run much higher this year. There is an increase in acreage 23 per cent and prospects are generally good. The area in celery in California is as follows:

	1916-17	1917-18
Contra Costa County	1602	2075
Sacramento County	995	967
San Joaquin County	655	840
Los Angeles County	900	1200
Orange County	150	200
Scatter counties	150	200
Total acreage	4452	5482

Included in the estimate of scattering counties are small areas in Alameda, Santa Clara, Santa Cruz, Yolo, Yuba and San Diego Counties.

A few cars of celery have already been shipped from El Monte, Sacramento and Orange County, but these early shipments are incidental to the movement. The main crop has begun to move from Walnut Grove, Anaheim, and Holt. Southern California will do some shipping for the Thanksgiving trade but the big volume will come later.

A car per acre is usually considered a normal yield or full crop. The standard load has been 160 crates per car when the celery is running large, but is increased to 180 crates later in the season if the celery does not make a good growth. It is probable that the season will start out with 180 crates per car this year as a result of the car shortage.

#### Book Review

#### THE STRAWBERRY IN NORTH AMERICA

"The Strawberry in North America, History, Origin, Botany and Breeding," by S. W. Fletcher, Professor of Horticulture, Pennsylvania State College, published by Macmillan Company, New York, at \$1.50.

This is a book of 234 pages, many fine engravings, with six chapters touching upon early history of the strawberry, going back to colonial days, to the beginning of garden culture, of commercial culture, the introduction of varieties, etc.; rise of commercial strawberry growing, packages, origin and botany, desirable characters in a variety, breeding of stem varieties for specific purposes, breeding methods, bud variation, naming and testing new varieties, etc.

This book in conjunction with the same author's "Strawberry-Growing," completes a survey of the strawberry as grown in North America. Modern cultural methods are presented in the other volume. The origin and history of the North American type—one of the most interesting chapters in our promology—are dealt with here.

Corn bread is worthy of a place beside the Thanksgiving turkey.

Red Crown is not a mixture. It has a continuous chain of boiling points.

Standard Oil Company

## Questions and Answers

ANSWERS BY EDITOR AND STAFF

### Mildew on Raspberries

A subscriber recently sent raspberries showing whitish mildew appearance and some fruit of no value whatever. The specimens were referred to C. O. Smith, of the pathological laboratory, and he writes:

The raspberries seem to be affected with a fungus which is called Mucor. I do not know that there is any remedy for this particular trouble.

### Roses and Fuchsias

When is the time to prune roses? Mine, six years old, McArthur, Rainbow, Madam Abel Chatenay, have had good care but have grown larger until they must be reduced. Also my large fuchsias, six years old, trained against the house now eight or ten feet high,

have for the first time, this season, grown ragged, straggly looking, leaves are falling off and have ceased to bloom. What is the cause and remedy? Would it be wise to cut close to the ground? Large pelargonium which has been well watered is drooping and sickly, leaves wilted. — Subscriber, Long Beach.

Mr. Brauntun answers: "Both roses and begonias may be cut back as heavily as you please, but would advise leaving a framework of the larger and stronger canes, at least a foot high in case of roses and at least two feet high in the fuchsias. It is best to leave roses now until coldest weather (frost) is past, for they will not now make new wood and bloom before frosts. Fuchsias are rather more ten-

der and are best pruned in March. It is not possible to tell what is the matter with them except one is conversant with soil, care, etc. Your pelargonium doubtless gets too much water as they thrive in great heat and with little water. From the growth of all the plants mentioned an excess of nitrogen in your fertilizing is indicated. You need more phosphoric acid and potash."

### Covering for Tree Wounds

Is there some preparation, ready made or that can be made at home, which will be good to use on trees after pruning or sawing off big limbs, something that will seal over the wound until it is healed?—Subscriber, Anaheim.

Some coat a large cut with Bordeaux or any antiseptic wash. After it is thoroughly dry it is then covered with grafting wax, with asphaltum, with tar or even a good lead paint. If a lead paint and oil paint is used, how

ever, care should be exercised not to let run over bark of tree as it may prove injurious. Where paint is used it should be rather heavier or thicker than used in ordinary painting.

### Seedling Walnuts

What method of procedure would you advise with a two acre grove of walnut trees, just commencing to bear, which are of inferior seedling stock? The ground is partly sandy and partly heavy.—Subscriber, Anaheim.

If these trees are thrifty we would recommend grafting every tree in the orchard, using best scions obtainable.

### Limberneck in Turkeys

What is the matter with our turkeys? Some of us down here (California) have lost five to ten per cent of our flocks. They are taken suddenly sick and we sometimes find two or three dead under perches in the morning; sometimes they live two or three days. The symptoms are a very limber neck; birds seem unable to hold up their heads or keep them from switching around. They seem too weak to stand and refuse to eat or drink.—Subscriber, Calipatria.

Some years ago while I was still a novice at raising chicks I lost a number with this very same trouble. Sometimes they would run around, apparently all right, then, suddenly especially if they were caught or touched, their necks would twist in a most alarming manner. I learned afterward that this disease was limberneck,—just what the symptoms indicate,—and that it always comes from something wrong with the digestion. With my chicks it came, I am certain, from eating moldy mash. They were confined in Philo coops. The weather was damp and my yard heavily shaded, so that mash which was spilled in the bottom of the coop soon became a mass of mold. Now, what have your poult been eating? The dead turkeys, if they were left within reach, might account for some of the cases. It is a good plan when birds die on the premises to bury deep or burn the carcass, and burning is safer than burying. A stray dog often exhumes a carcass that is supposed to be safely out of the way or carries back one that has been removed a long distance. Eating green corn might cause indigestion, but hardly limberneck which is due to absorption of poison from the intestines. Moldy corn or any kind of moldy feed, on the other hand, is one of the most common causes. The best treatment is a good dose of physic. Give from 50 to 60 grains of Epsom salts or three or four teaspoons of castor oil to a full grown bird. The salts is best mixed in moist mash, but if the birds will not eat the dose must be forced down. The dose for young stock is in proportion to age. Better shut your turkeys up for a few days, at least until the range is carefully examined, and examine the feed to make sure it is a fresh and sweet.

Intestinal worms sometimes cause limberneck. If your birds are affected in this way, the physic will disclose the fact, and they can then be treated with turpentine or tobacco.—J. A. K.

### Treating Beans for Weevil

Will beans treated for weevil with carbon bisulphide be good for food?—Subscriber, Delhi.

Mr. Swain who is conducting a series of experiments at the Riverside experiment station has found that submitting beans to a carbon bisulphide gas where it is too great strength, say five pints to the thousand cubic feet, the germinating power is lowered, but that there is no injurious effect whatever where proper treatment, say not to exceed three parts to 1000 cubic feet, is followed, either for seed or eating purposes.

### Ashes on Garden

I have been told that tomatoes will not grow if the soil is heavily dressed with wood ashes, that ashes are injurious to cabbage plants, egg plants, etc. I put ashes on cabbage to kill green fly. Not much good. Also put earth, ashes and straw in box to make nest for setting hen. Got only one chick.—R. R., Redlands.

Of course wood ashes are very concentrated. Where all good wood is used they contain about four per cent

Fresno, Cal.

potassium or five per cent potash and are very valuable to any garden. We do not think in any reasonable quantity would be injurious to any crop. Doubt not the subscriber is right in that they are but little value for the green fly, also perhaps of no value in nests of the sitting hen. If covered with straw, we do not see where there should be any injury from using them.

### Best Black Fig

Answering query as to best black fig for planting in California George C. Roeding says: "I believe the California Black or Mission Black to be the very best all-around black fig. The trees are strong growers and heavy producers, although the fruit is not as large as the San Pedro. The San Pedro fruit is considerably larger but the trees are not so hardy as the Mission and do not bear so heavily. Another thing to take into consideration is the difference in climatic conditions near the Coast and in the central valley. For instance, you have doubtless heard that the Kadota is larger than the White Endich. These figs are one and the same but when grown near Los Angeles they are very much larger than the figs produced in San Joaquin Valley and therefore are often considered separate varieties. The same is also true of the San Pedro, which is very much larger in Los Angeles County than in Fresno, in fact almost a third as large. I have particularly noticed this at Niles where the same varieties are much later than they are in the valley and also much larger. The California Black is being planted quite largely in San Joaquin Valley and the demand for the dried product seems to be increasing.

### Rebud

Have two trees (Valencias) in my orchard that are evidently sports—fruit is coarse and worthless—would you advise budding or taking out? Trees are seven years old.—Subscriber, Santa Ana.

Without question we would rebud, that is if all trees are healthy and thrifty. If the buds are taken from tested trees three years would see these trees in full bearing, whereas it would take another six or seven years before trees just from the nursery would bear. We should secure a budder who is thoroughly familiar and proficient in the budding over of old trees or there might be disappointment in results.

### Rennet

For making Jack cheese where would one purchase rennet? Unsigned. Any dairy supply house advertising in the Cultivator can furnish you rennet.

### Will

Is it necessary to go to a lawyer to make a will?—Unsigned.

If the inquirer had signed his name we could have sent former Cultivator giving the information. In a word, it is not necessary to go to a lawyer. If will is written entirely by the one making it, duly signed and dated, it is sufficient no matter how simple the form. Witness is not necessary, but best for security.

### SQUIRREL WEEK IN ORANGE COUNTY

Orange County is going after the pests. Horticultural Commissioner Bishop has taken up the fight and will prepare tons of squirrel poison and distribute through the inspectors in the various districts. The present week is designated the country over as squirrel week, and every farmer, every one owning even unfarmed lands, is expected to be in line and do his duty and "Hooverize." Any land owner who fails to clear his premises of the pests will have the work taken in hand by the county inspectors and the cost will become a lien on the land. Mr. M. J. Pickering, inspector of the La Habra section, is especially interested and doing some most efficient work. Every county in the state is observing or should observe "squirrel week" or better "squirrel fifty-two weeks."

# Cleveland Tractor

## Prepare Now for Bigger Crops Next Spring

Forget the old routine. Adopt improved methods. That's the only way to solve your labor problems and boost production in 1918.

Munition plants and factories in general are working at top speed. They have steadily drained farm labor from the fields. Now the draft has taken many more men.

You must cut down on labor requirements. That is exactly what the Cleveland Tractor, the country over, is helping wide-awake farmers to do.

This wonderful little machine will do your work better, faster, and at much less cost than you can possibly do it with horses and men.

Hauling two 14-inch bottoms, it plows  $3\frac{1}{2}$  miles an hour—8 to 10 acres a day. That is more than you can do with three good 3-horse teams and 3 farm hands. And at this high speed the Cleveland Tractor turns over the prettiest job of plowing you ever saw.

Figure up the saving—not only in labor—but in time and good, hard cash.

In addition, the Cleveland enables you to plow when you need it and where you need it. Because it crawls on its own tracks, it can go over almost any soil at any time. That is something you can't do with horses and men. Think of the extra yield that means.

Moreover, the Cleveland does not pack your seedbed. It is light—only 2750 pounds—and has 600 square inches of continuous traction surface. No other tractor built exerts so small a pressure.

The Cleveland gives you 20 h. p. at the pulley and 12 h. p. at the bar—economical, dependable power to do your hauling and stationary engine work.

Rollin H. White builds the Cleveland Tractor with all the scrupulous care he put into the manufacture of motor trucks. He uses only the best materials—only the finest motor truck parts and gears. He has protected all gears with dirtproof, dustproof casings.

He has so designed the Cleveland Tractor that it steers by the power of its engine. Just a light turn of the wheel and the motor does the rest. Anyone can drive it. It will actually turn in a 12-foot circle—less than it takes to turn a team.

These are real advantages—too big and too important to be overlooked. There are others just as big. Combined, they make the Cleveland the biggest labor-saving, time-saving, money-making implement introduced into modern farming.

Prepare now for bigger, better crops next spring. Decide now to make the Cleveland earn money for you, as it is doing for hundreds of others.

We are so crowded with orders that we cannot promise delivery of new orders before January 1st. So it is necessary that you order now for delivery early in 1918.

Write to us today for full particulars and name of the nearest Cleveland dealer. Use the coupon or address Dept. BF.

And Smith, an angry man is he, with trouble on his hands.

He cusses softly to himself and crawls beneath the car, And wonders why it didn't bust before he got so far.

The carburetor seems to be the cause of all his woe;

He tightens half a dozen bolts, but still it doesn't go.

And then he tries the steering gear, but finds no trouble there—

Till, wet with perspiration, then, he quits in sheer despair.

He squats beside the road to give his brain a chance to cool,

And ponders on his training at the correspondence school;

And then he starts the job once more, until by chance 'tis seen

The cause of all his trouble—he's out of gasoline.

—Edgar A. Ryan, in Judge.

It is a very easy matter to ask the garage man if the gasoline tank is full, and it is equally easy for the garage man to assert that it is. There are, however, many ways in which mistakes on this point may arise, and there is abundant proof of this in the many stories in circulation concerning automobilists who have got stuck by the wayside because someone told them "the tank was full," and they believed it. The only safety lies in exact knowledge. The same principle applies to the filling of oil tanks, water tanks, grease cups, lamps, acetylene generators and so on. Everything that holds supplies should be filled before starting out, even if the trip planned is only a short one, for it is impossible to foresee the end of the run. Better be sure than sorry.

One who uses a car frequently will inevitably form certain habits which are likely to affect the condition and working of the car more or less. The habits formed might just as well be good ones as bad, for with a little care at the beginning it will become second nature to do things as they should be done. So make it a habit, an invariable rule, to go over the car before starting out, no matter what the trip. See that all the tanks are filled and the lamps and generators properly supplied; see that the grease cups are screwed down a little to force lubricant to the bearings they serve; see that those parts which need oiling,

but are not fitted with oil cups or other lubricating devices, are given a little oil from a squirt-can; if the steering connections are provided with leather boots packed with grease, see that the boots are intact and contain a good supply of lubricant, and if the boots are fitted, lubricate the joints. And so on through the car. It is impossible to give any specific directions with regard to this or any other phase of the work of caring for the car, because there are so many different designs of cars that what would be quite clear to the owner of one might be unintelligible to the owner of another car of different make and different design of the details referred to. But a reasonable degree of familiarity with the car will enable a man to see in detail what can only be generally indicated in such an article as this.

The matter of lubrication deserves more than passing notice. It is sufficient to make sure that the oil reservoir is filled, for it may, and not infrequently does, happen that there is a stoppage in the oil ducts so that the frictional surfaces run dry; therefore assure yourself that the oil is actually feeding to the motor; just how to obtain the assurance will depend upon which of the many systems in use your car is equipped with. It cannot be too emphatically stated that lubrication is absolutely essential to the continued operation of the motor, the motor is deprived of lubrication the results will be far worse than the gasoline supply is cut off, because without oil the surfaces in friction contact will cut and score each other to the point of destruction, so far practical usefulness is concerned though the gasoline supply can be stopped without damage to the engine. And as the engine of an automobile runs at comparatively high speed, it takes it but a short time to use up the oil in the motor and pipes, and trouble then commences. See that there is plenty of oil and that it feeds regularly. A very big repair bill may very easily follow a shortage of oil in the engine. As to the oils to be used, the manufacturer of the car usually knows what oils give good results with his machine, and is obviously to his own interests to give accurate information on this subject. Don't experiment unless you know a great deal about the matter.

## Timely Suggestions

Short circulars or leaflets containing a fund of information are being mailed almost continually from the agricultural experiment station of the state university. Anyone interested particularly in the following should write the Agricultural Experiment Station, University of California, Berkeley, and the bulletins will be sent without cost.

One of the most valuable in the last bunch mailed and which is of interest to live stock men, is "Facts About Anthrax" by Dr. Haring.

Of interest to the homemaker is "Cooking the Tepary Bean" by Prof. Jaffa. "Homemade Vinegar" by Prof. Bioletti and Prof. Cruess is another.

For the vegetable gardener: "Vegetable Planting and Harvesting Calendar for Central California." This is a tabulated form containing a fund of information for planters in the great central valley of the state.

For the cotton planter: "The Importance of Using Good Cotton Seed," by Dr. H. J. Webber.

All of us are interested in the new "Twenty-five Ways of Conserving Labor," by Prof. R. L. Adams.

Another of interest is "Improving Rice Seed," by W. W. Mackie.

The two latest numbered bulletins are 284, "Irrigation of Alfalfa in Imperial Valley," by Walter E. Packard, and 287, "Vinegar from Waste Fruit," by W. V. Cruess.

Circulars: 167, "Feeding Stuff of Minor Importance," by F. W. Webb; 175, "Progress Report on the Production and Distribution of Milk," by Elwood Mead; 176, "Hog Cholera Prevention and the Serum Treatment," by P. T. Peterson; 177, "Grain Storage Seed," by Ernest B. Babcock; 178, "The Packing of Apples in California," by Warren P. Tufts; 179, "Control of the Ground Squirrel," by Joseph E. Dixon.

A small boy's idea of a food dictator is mother calling a halt at a thirteenth buckwheat cake. — Farm Journal.

FARM DITCHER  
TERRACER  
AND ROAD GRADER

**All Steel—Lasts a Lifetime**

Simple and practical. Cuts V-shaped ditch up to 4 feet deep; cleans old ditches; grades roads; builds terraces, dykes and levees; works in any soil, wet or dry. 2, 4 and 6-horse sizes; large size fine for tractor. Write for catalog and list of users near you. No charge. No obligation.

OWENSBORO DITCHER & GRADER COMPANY, Desk 1B, DENVER, COLO.

## Ditching

—usually the hardest job on the place—make it the easiest and save time and help-hire besides by using

**K HAND POWER Stump Puller**

Write today for special offer and free booklet on Land Clearing

Works on any land, on hillsides and marshes where horses cannot operate. Easily rips out any stump that can be pulled by any horse power machine at about one-half the cost. Safer, better and cheaper than powder. One man with a K can outpull 16 horses. Works by leverage—same principle as a jack. 100 pounds pull on the lever gives a 48 ton pull on the stump. Made of the finest steel. Guaranteed against breakage. Endorsed by U. S. Government experts.

ACTUAL PHOTOGRAPH

# Feterita

Written for California Cultivator By C. Alfred Wright

**T**O you who are raising feterita more for the fodder than for the grain I wish to give the benefit of my experience. If you have a reasonably frostless location so that the roots will not freeze out during the winter, more weight of fodder may be raised from the stubble the second and third years after planting than can be raised from seed the first year. Also two crops in one season may be raised from stubble though only one can be raised from seed.

In cultivating for the second season's crop I followed the methods of the southern cane planters, remembering that cane and feterita belong to the same family. Early in the spring, the last of January if you can get onto the ground, take one horse with a seven inch mouldboard plow and turn a light furrow away from the row. This drains off surplus moisture, allows the ground to warm up, and starts the young canes earlier. When the young growth is well start-

ed, say two or three inches high, bust out the middles with a large single-shovel plow, and smooth down with a five-tooth cultivator. The ground may also be harrowed crosswise at this time without injury to the grain. Cultivate at proper intervals to conserve moisture, keep down weeds and aerate the soil.

From the stubble a great number of canes spring up, three times as many as come from the seed, and being already rooted a heavier tonnage of fodder is produced though of smaller stalks and also smaller heads of grain. Being started early it should be ripe and ready to cut in July. Take it off the ground while it is yet a little green because it makes richer, more palatable feed if cut while the sap is yet in the stalk.

Now if a second crop is desired irrigate thoroughly, soak the ground deep, and the young growth quickly springs up again. Cultivate with the five-tooth cultivator. One thorough irrigation will produce a good crop, two a better one. Let's make three tons grow where only one grew before. Don't make the mistake of plowing up your stubble during the winter months.

**BEANS FROM EAST INDIES**  
Beans grown in the East Indies, arriving at the Port of Los Angeles, were condemned as unfit for food because of presence of hydrocyanic acid gas. The "Lima Bean Bulletin" says: "The explanation given for the presence of the acid was that unfavorable weather conditions prior to harvesting had started a deterioration in the beans as a result of which poisonous gas was developed. The condemnation of this cargo of beans may quite possibly interfere with what otherwise would probably have been a heavy importation of beans from India, since advices indicate a very large bean crop was produced in that country this season."

Owners and those interested in farm tractors will be interested in the short course in gas tractors which is being conducted at the university farm at Davis this week and next. It is also announced that this course will be duplicated next spring at the citrus experiment station at Riverside. There will be nine different types of tractors, and attendants at the short course will taught to inspect, adjust and repair. The labor situation is making discussion of the tractor a matter of greatest interest.

## More Beans

A Los Angeles County bean grower writes: "In re your question and answers department of November 3 issue, under caption "Some Beans" let me tell the inquiring party of my Blackeye bean crop this year.

March 1 I planted potatoes between three year old orange trees, and on June 7, 8, 9, dug 8000 pounds of tubers per acre. The potatoes had been irrigated May 11 and 31. After digging the potatoes the ground was harrowed twice and then drilled to Blackeye beans June 21 and 22, putting 16 pounds seed to the acre. August 2 and again on August 17 they were well irrigated, but owing to the size of the vines they were not cultivated. September 17 the beans were cut and October 30, 31 threshed and I had the pleasure of paying the thresher for 68½ field run sacks from 2½ acres. The pods were not two feet long but many of them contained 13 and 14 beans. The soil was sandy loam, part of which grew Limas in 1915 and the balance Blackeyes the same year. After the beans were a few weeks old we could very easily see the line where Blackeyes were grown two years before, the vines being much darker green this season. It was not convenient to thresh and keep tab to see whether the former cropping made any difference in this year's yield. The average was 2050 pounds per acre."

### Book Review

#### THE BOTANY OF CROP PLANTS

"The Botany of Crop Plants," a text and reference book by Wilfred W. Robbins, Ph. D., Professor of Botany, Colorado Agricultural College, published by P. Blakiston's Son & Company, Walnut Street, Philadelphia, \$2.00 net.

This is a book of almost 700 pages, round-cornered, well bound, fully illustrated with drawings and half tones, a most complete book of its kind.

There are 40 chapters touching upon the seed plant body, fundamental internal structure, roots, stems, leaves, flowers, fruit, seed and seedlings, classification and naming of plants. These eight chapters make up the first part of the book.

Part II, made up of the other 32 chapters, touches upon various botanical families. For instance, first, gramineae, grass family, the next upon triticum or the wheats, the next on avena or oats, another on hordeum or barley, another on zea, corn and maize, another on sorghums, etc.

Much of the material in this book is the same as has been used in college classes and is of greatest value to the student, but every farmer who is interested in the life about him will find the book of value as a reference book at all times. Not the least valuable part of it is a complete glossary and index. In the index alone there are

29 pages, which makes it possible to turn almost immediately to any topic desired.

"And does your husband still think you are an angel?" asked the privileged friend.

"I guess so," answered the bride of one short year. "At least he seems to think I don't need any new clothes."

WATER FOR STOCK

WATER FOR THE BATH

WATER FOR KITCHEN

## WATER WHERE YOU NEED IT

When Pa was a boy things were different

He drove the cows to water at the creek in the "lower eighty"

On Saturday night his Ma heated teakettle and boiler full of water which had been carried from the spring

The family bathed in the wash-tub—in the kitchen

All the water used for dish washing and cooking was pumped and carried to the house

Pa's and Ma's life was mostly drudgery and carrying water helped make it so

How different is this side of the picture

We have a big redwood tank on a tower with a redwood pipe leading to the stock tank in the pasture

Another redwood pipe line leads to the house where turning a faucet is the only effort needed to produce abundant water

Our redwood tank and pipe line will last a life-time and earn more dividends on the small investment than anything we have on the farm

Pa says he wishes his Ma had had an outfit like ours

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

**THIS WEEK'S COVER**

The makings of a lot of good California pork is illustrated on this week's cover page. The great central valley of the state, Imperial Valley and, in fact, all sections of the state, are producing thousands of tons of sorghum grains. Analysis shows them to be practically equal to corn as a feed for live stock. Then why doesn't the state produce more? To which we may answer: "It is producing more, and another year will see a still greater increase in production." Many a farm is installing grinding machinery, and the grain, some without expense of threshing, is grown, cured and fed on the place and the finished product driven to market on the hoof.

The sorghums are great money makers.

The grain heads used in the illustration were sent to the Cultivator office by W. L. Norris, and they are from the Korn Kontest which the producers and merchants of Earlimart, Tulare County, held a few weeks ago. Every grain is plump and hard and every head compact and heavy.

**SAVE THE WASTE**

The waste from the table which fills the garbage pail is not the only serious waste which is confronting the nation at this time. Dr. Mead of the University of California calls attention to the delivery of milk impractically all of our cities. Two or three or sometimes more milk wagons drive down every little street, each producer having his own particular customers.

It might be a slight hardship to the consumer to be deprived of his particular producer, but surely at such

times as these when labor is as much worth conserving as are the crusts of bread, it is a problem worthy of study.

**NEW SECRETARY**

D. C. Fessenden of Riverside has been appointed by State Horticultural Commissioner Hecke as secretary to the state commission. Mr. Fessenden has already taken up his new duties and we doubt not is perfecting arrangements for a great state convention to be held in Sacramento.

**IRRIGATE**

Thousands of acres of California orchards have been planted to green manure or cover crops. These are up and growing, at least in some of the orchards. Others are waiting for the rains, and the rains are not as yet sufficient. If a mass of humus forming material is to be turned under it must have a start at a period of the year when there is enough sunshine to warm up the soil.

**RAIN**

We are not specially long on rain in any section of the state as yet. We are thankful for a light shower given early in the month, and within the past few days northern and central portions of the state received another slight promise—and the South a promise unfulfilled—that "The storm is coming down the Coast and you will get yours in time." While we are waiting for the more plentiful rains, this is a good time to discuss with ourselves as to whether our soil is in condition to hold every drop which falls. It is also a good time to discuss the storing and utilizing of the many drops which will escape to the ocean unless some serious consideration is given.

Let's Hooverize the water.

**Y M. C. A.**

This is the week set aside by the Young Men's Christian Association to raise \$35,000,000 to devote to the social, physical and spiritual welfare of the boys in the trenches and the boys in the camps being trained for the trenches.

One of the best organized institutions in the world is the Y. M. C. A. It carries the spirit of home life to the very battlefield, and to every camping place where soldiers are gathered the home influence is extended. The equipment for this work calls for the expenditure of money. Much has been given through this great organization, but more is needed. Hence the great effort of this week, and California, as has been the case with the Red Cross campaign, the Liberty Bond campaign, and every other call made upon her, is responding with a most hearty "Here." This week's effort will be no exception.

**TRUE THANKS GIVING**

Thanksgiving this year calls for a more general and serious observance than any preceding year since the Civil War. We have blessings enough so that everyone may find truest cause for giving of thanks, and with it, may we not also make it the time of giving that others may be thankful our lives have been for a purpose? There is not only most terrible suffering on the part of Europe's people, but our own boys are going to the trenches, and while the richest government on earth is not going to see them suffer or see them want for any

of the ordinary comforts, is it not well that we should all look to their more complete comfort by at this time giving of our surplus?

As suggested last week, there is often—if not needless waste—a surfeit of good things on the Thanksgiving table. The expression of thankfulness at the harvest home festival has been combined with a day of feasting until we have given ourselves more than our comfort, at least, demands. Let that surplus be used to pass on comforts to the boys who are fighting our battles for us. In other words, as we expressed it last week, let us save the price of the "fixins" and expensive knickknacks of the Thanksgiving meal and send it through the Red Cross, Y. M. C. A., or K. of C. to our boys at the front that they may have a few extra comforts at the Christmas season.

Make contributions through your own local associations or, if more convenient, send to the Cultivator and they will be forwarded at once.

**WAR TAXES**

Our sports and even our vacations these days are subject to a form of tax. It became effective on the day of the passage of the War Tax Bill. Unlike the income tax, information as to these war excise taxes is not essential because we pay them involuntarily at almost every purchase we make, so whether we are informed or not, we will support the government. However, for general information, here are some of the items affected by this portion of the tax bill.

**War Excise Taxes**

Automobiles, motorcycles, trucks and wagons sold by the manufacturer, producer or importer, three per cent of the price for which sold.

Motor and sailing boats, yachts, etc., with fixed engines, and sailing boats of over 500 pounds, length not over 50 feet, 50 cents for each foot; over 50 feet and under 100 feet, \$1.00; over 100 feet, \$2.00 each foot. Not over five tons net, \$5.00.

Graphophones, phonographs, piano players, records used in connection with any musical instrument, three per cent.

Moving picture films, not yet exposed, one-fourth of one cent each linear foot. Picture films ready for production, sold or leased, one-half of one cent per foot.

Jewelry, three per cent of price for which sold.

Sporting goods and games, not including childrens toys, three per cent.

Perfumes, extracts, toilet soaps, toilet waters, cosmetics, in fact nearly all toilet articles, two per cent of price.

All proprietary medicines including pills, tablets, tinctures, bitters, liniments, etc., two per cent of price.

Chewing gum, two per cent.

Cameras, three per cent.

Floor stock of all the above named articles in the hands of the retailer on day this act went into effect must also pay on this entire stock one-half of tax imposed on the sale of such articles.

Taxes on the above have all been effective since the date of the passage of the act.

**CULTIVATOR CHISEL TEETH**

Status Quo Ante sat on the wall  
Status Quo Ante had a great fall.  
Not Kaiser Bill's scheming, nor all of his men,  
Can put Status Quo Ante together again.  
Some people in this world cast a crust on the waters and expect to get back hot, buttered waffles and maple syrup.—Memphis Commercial-Appeal.

Running a tractor under direction of a Prussian overlord and marketing our products with Prussian tax collectors at hand would seem—well, how would it seem?

**This Week's War News**

Halg is continuing the everlasting pressure on the western front, and slight gains are reported every day.

A plot to destroy over 200,000 tons of grain stored in Contra Costa County was discovered in time to avert the disaster. Phosphorus was the substance used in the effort to start the fires.

A feeling of unrest obtains throughout much of Turkey, and many Turks who have been taken captive freely express the feeling of their countrymen that Turkey has been sold to Germany.

Notwithstanding thousands of American soldiers have been transported to France no transport while carrying our soldiers has been sunk. The American navy is doing wonderful service in the U-boat zone.

Chaos still prevails in Russia. The Kerensky forces are rapidly gaining ground, and reports are that Petrograd is again practically under control of the government forces. The attempt to form a pro-German cabinet has failed.

In his great address at Buffalo President Wilson said: "My heart is with the pacifists but my mind has a contempt for them. I want peace, but I know how to get it and they do not," he declared. "This war is to be won if we want peace which will last more than a few minutes."

The British navy is often criticized for doing nothing, but apart from its other duties it has managed to enable 13,000,000 men to cross and recross the seas with a loss of only 3500, and to protect the transportation of 51,000,000 tons of coal and 25,000,000 tons of explosives. — San Francisco Chronicle.

The managements of railways assert that from now on until March 1 will be the tug of war in transportation questions of the United States. If the railways can hold up and move freight and troops as demanded up to that time they will have adjusted themselves so as to handle any future problem which may come.

One of the first requests of the new congress which will convene in December will be to pass an amendment to the present draft law, which will provide for registration of men who have reached their majority since last registration day and for other features which will make for more effective and more rapid work in building an army.

We face an enemy of fearful concentration of purpose. In one city in Germany the entire population, rich and poor, are going barefoot to save the waste of wool and leather. Are Americans that much in earnest? No, not yet. We hope they will not be called upon to be. But if they are—we may refer to Valley Forge, to the dark days of '64 and '65, and to Andersonville.

The Kaiser's guns are now able to reach the city of Venice. The pope is pleading for the sparing of some of Italy's most sacred landmarks, and while the Allies are rushing reinforcements as rapidly as possible, there is a most serious outlook for northern Italy. On both sides there are said to be over 8,000,000 men in action. Over 6,000,000 of these are Teutons, Huns, Turks and Bulgarians. The efforts of all these are centered on a 40 mile front. Latest dispatches state that Allies are holding the line.

Serve your country by saving food.

# Agricultural News Notes of the Pacific Coast

## Northern California

Yuba County is harvesting a million dollar rice crop.

Sacramento County finds her bean output far greater than anticipated.

Many owners of deciduous orchards in Napa County are planting cover crops.

Thermalito, Butte County, is thoroughly organized and ready for a farm adviser.

Nevada County is producing an exceptionally large crop of almonds this season.

Rice growers near Colusa report most of the crop under cover before the rains.

Serious forest fires have ravaged the hills of Humboldt County during the past two weeks.

Mrs. Hamilton, a live stock woman in Dixon, Solano County, has just shipped five cars of cattle.

Sutter County is shipping great quantities of baled straw for use in paper and pulp board mills.

California is now leading by millions of bushels all other states in the nation in the production of beans.

Farm bureau meetings in Glenn County, November 15, 16, Jacinto; 19, Orland; 22, 23, Plaza; 26, 27, Elk Creek.

Sacramento County farm bureau meetings will be held at Carmichael, November 20; Del Paso, 21; Franklyn, and Hood, 28.

The Western Berkshire Congress is making plans for its annual sale at its meeting at the university farm at Davis in February.

A factory at Redding, Shasta County, has orders for large logging trucks which are to be forwarded for use in the forests of France.

Eldorado County has secured the requisite number of farmers' signatures and will soon be fully organized and entitled to a farm adviser.

The state railroad commission and various shippers met last week to discuss matter of charging for switching after initial placement of cars.

Woodland, Yolo County, is pasturing its stock on sugar beet tops, corn and alfalfa fields and reports the stock feed situation never better than present.

The department of agriculture has agreed to appoint adviser for Tehama County until board of supervisors appropriate the full \$2000 for the first year's quota.

The Amador-Eldorado Live Stock Association will meet at Jackson, November 24 in annual meeting. Live stock protection and election of officers are features.

Sonoma County has delivered more and better prunes to the packing houses this season than ever before and proposes to add to the glory of Sonoma County prunes.

The state fish and game commission is investigating conditions in the Little River rice fields with especial reference to damage caused by flocks of wild ducks. This work was taken at the request of the Western Rice Growers' Association.

Ft. Bragg, the center of the lumber industry, way up in Mendocino County, has become an important factor in supplying food to the hungry world. This year she has shipped immense quantities of fish—one shipment running about 145 tons—of huckleberries and of beans.

## Central California

A Harvest Home Festival is to be held at Fresno.

The Associated Raisin Company reports assets totalling \$4,558,000.

Oakdale, Stanislaus County, has shipped over \$12,000 worth of almonds.

Chinese potato growers around Stockton are accused of hoarding potatoes.

Agents of the British army are buying dried fruits in the Santa Clara Valley.

Best methods of fertilizing alfalfa are being discussed by farm bureau centers of Merced County.

A new packing plant has just been completed at Lindsay, one of the largest and best in the state.

Merced County farm bureaus have secured pledges from 5000 acres in excess of last season's wheat planting.

"More water and greater conservation of water we now have" is the appeal of Stanislaus County producers.

Fresno County dairymen and creamerymen are organizing and getting together on a basis fair to both interests.

The Santa Clara Valley reports that the future output of prunes in California will be nearly double that of today.

Nearly 1000 sheep are dead, the result of eating grape leaves when pastured in a vineyard which had been sprayed.

George W. Wendt, formerly of Nevada, has been chosen to superintend live stock affairs at the Palo Alto stock farm.

The Peach Growers Association has paid interest to all stockholders. The season will net to the growers around eight cents.

Every shipping point of the San Joaquin Valley reports shipments of products of the soil in excess of any preceding year.

The Oakdale irrigation district is planning to pump water from wells to supplement the irrigation supply secured early in the season.

There is contention between the board of supervisors of Fresno County and the directors of the agricultural fair. The board is making certain regulations which are obnoxious to the fair directors.

The San Jose Grange Patrons of Husbandry recently voted unanimously in favor of the local prohibition movement. The Grange is now organized in 33 states of the Union and has over 1,000,000 members.

County Commissioner Rouillard of Fresno has discontinued for the time being four squirrel inspectors and a deputy having to do with the squirrel campaign. This because of certain private interests being advanced at the expense of the county.

Fresno County producers are discussing the matter of establishing colonies for laborers. They are also very sensibly insisting upon a ten-hour day. They have established a minimum wage of two dollars and board, or a minimum of \$2.50 without board.

For years Fresno has been experimenting with the growing of "currants," Zante Currants, or, more properly a small sour grape, now often referred to as "currant grape." The experiments have proved successful, and it is now predicted that they may soon be a commercial factor.

## Southern California

Hemet is canning Beaumont apples.

Banning, Riverside County, has shipped its last car of almonds.

Some producers have been holding alfalfa hay at as high as \$28 per ton.

Calipatria, the newest town in Imperial Valley, has ginned 150 bales of cotton.

San Bernardino County farm bureau centers are getting into more active service.

Blythe, Palo Verde Valley, in eastern Riverside County, is discussing the growing of flax.

The date growers association of Coachella, Riverside County, met at Coachella last Friday.

Walnut pruning is being discussed by members of the Farmers' Club at Mound, Ventura County.

Nearly all of Redlands visited the apple show at Yucaipa, San Bernardino County, on Redlands day.

The third annual farm assembly will be held at El Centro, Imperial County, date to be announced later.

County Horticultural Commissioner Armitage is leading in a squirrel extermination campaign in San Diego.

Orange County is making a campaign against stage drivers who are manifesting a "road hog" disposition.

The Claremont Pomological Club held its fall meeting at the citrus experiment station, Riverside, last Saturday.

Midsummer shortage of water is declared to be the cause of disappointing returns from many of the cotton fields of Imperial Valley.

The Associated Beet Growers of Southern California are discussing the erection of cooperative sugar factory somewhere in Orange County.

The light rain of last week did practically no damage to beans still out, and the greater portion of all varieties were threshed and warehoused.

One walnut grower near Elsinore, Riverside County, recently took a truck load of nuts to market, for which he received a check for \$3500.

There are over 8000 acres of grain sorghums in San Bernardino County, and the growers are now selecting seed for a still bigger crop next year.

Practically all of the beets in the southern part of the state were delivered by November 5. As soon as stock in hand is exhausted factories will close.

One citrus by-products factory handled last season 5100 tons of lemons which were not suitable for shipping. The output was 175,000 pounds of citric acid.

The Lima Bean Growers' Association has adopted the trade mark "Compass Brand Limas" and will build up through advertising and standard grade stock a valuable brand.

Chino, San Bernardino County, is still signing up growers who will unite in the securing of a cannery. It will be a branch of the San Antonio Association which now has a large packing plant at Ontario.

The lima bean harvest was entirely completed before the recent slight rain. Fruit dryers and bean growers have never been given a more favorable harvest season, and conservation was carried to the extreme in the gleaning which was more thorough than ever before.

## The Coast and General

Women will soon be assigned to routes as mail carriers.

The Philippine Islands export 131,558 tons of copra annually.

New York City is using women as train guards on the subways.

"Fence the ditches, pasture the banks," is urged by the University of Arizona.

The largest pack of salmon ever put up is the record of the Pacific Coast canneries.

One hundred head of horses were shipped to France from Lakeview, Oregon, last week.

The New York City peach belt shipped this year 6625 cars, as against 4459 cars last year.

Potato growers about Flagstaff, Arizona, are grading more rigidly and securing most satisfactory returns.

In the last national boys' and girls' club contest of the 33 northern and western states Arizona took two firsts out of the six contests.

The extension service of the University of Arizona is making interesting demonstration of its work at the state fair, Phoenix, November 12-17.

The fourth annual convention of the Potato Association of America is held this week Friday and Saturday at the new National Museum at Washington.

Chief Plant Inspector Ehrhorn of the Hawaiian Islands is leading in a campaign to save grains, beans and other products in storage from insect depredation.

The bureau of agriculture of the Philippine Islands has introduced a vast number of seeds and plants which are proving beneficial to the agriculture of the island.

The United States Food Administration has aided the state railroad commission of Texas in moving 1500 cars of livestock from drouth stricken sections to places of better feed.

The Northern Arizona state fair was held at Prescott, Arizona, October 18-20. An exhibit was made by the Arizona Goat Raisers' Association. The exhibit of mohair was exceptionally fine.

Because of discovery of a conspiracy plot Hoover has urged grain storage and live stock yard people of Seattle and other Northwestern points to protect their property by extra watchmen.

Over \$100,000 worth of cotton was destroyed by the fire in the camp of the Southwestern Cotton Company at Tempe, Arizona. This is the thirteenth fire which has occurred in the cotton gins of Arizona this season.

The interstate commerce commission has been petitioned by the railways to open the Fifteen Per Cent Case and give to the railways the advance in freight rates which was formerly requested. The railways assert that present conditions demand relief from some source.

About 8,000,000 acres of corn, or about 6.5 per cent of the crop, has been damaged by early frosts. The crop of marketable corn, however, will be far in excess of the 3,000,000,000 bushels, one of the biggest ever. In addition the price will be the highest ever, but presumably the grower will receive less than many have anticipated. While present quotations are far above it is thought the price to the grower will not exceed \$1.00.

## Breed Leaders

Every breed of livestock has its outstanding character the same as the human kind. A great dairy cow has proved her ability to produce anywhere up to 15 tons of milk annually; the trotting horse has secured his record around two minutes; the beefmaker has shown his ability to make the least amount of feed into the greatest amount of food; swine, sheep and others of the livestock family have shown themselves great characters. In addition—and here is where their worth is proven—these animals can transmit their productive power to their offspring.

Beginning with the issue of August 4 the Cultivator gave an account of Pietertj Bloom of the university farm dairy herd. Some things she has done and more than her daughters have done were chronicled. She was a most worthy leader in this series of articles. Others of her kind follow. More of the "handsome" type of animals will be given in the columns of the Cultivator during the next few months.

Written for California Cultivator By F. F. Stonerod

### TRUEDALE 367159

NE of the really great Short-horn sires in California is old Truedale, owned by the Pacheco Cattle Company of Hollister, C. N. and Tom Hawkins, owners.

Mr. Hawkins bought Truedale as a calf from Owen Kane, of Wisner, Nebraska in 1911. Of course he is not really an old bull but he has not been idle since coming to the Coast. His show yard performances are not impressive. He was shown in 1914 and stood second to a Glide entry that year, and since that time Mr. Hawkins has never fitted him for show, not because he failed

checo Lass 80th; second on junior yearling bull, Pacheco Lad 92nd. San Francisco; first on two year old heifer, Pacheco Lass 80th; first on junior bull calf, Pacheco Lad 109; second on two year old bull, Pacheco Lad 58th.

A sire who can produce such a large number of winners in three year must be an outstanding individual one who has the best of breeding and the ability to transmit those qualities which go to make up the ideal Short-horn. Truedale possesses all of these characteristics.

He is a son of Double Dale, he is Avondale, considered two of the breed's greatest sires. Truedale is a double grandson of Avondale. His

Truedale 367159

to win a championship but his value in the herd was so much greater than even his owner expected it would be.

Strictly speaking Truedale is not a show bull but he is a wonderful producer of show animals—as evidenced by his record. Every one of these prize winners are the get of Truedale, and their number and quality stamps their sire as a worthy individual to appear in our "hall of fame."

1915 winnings, P. P. I. E.; first on junior bull calf, Pacheco Lad 67th; second on senior bull calf, Pacheco Lad 58th.

1916 winnings, Sacramento; first on junior yearling heifer, Pacheco Lass 83rd; first on senior bull calf, Pacheco Lad 81st; first prize calf herd; first prize young herd; first in get of sire; second on senior yearling bull, Pacheco Lad 58th; second on junior heifer calf, Pacheco Lass 89th; second on produce of cow.

1917 Winnings, Sacramento; first on two year old bull, Pacheco Lad 58th; first on junior bull calf, Pacheco Lad 109; first and third on get of sire; second and third on produce of cow; second on two year old heifer, Pa-

dam was Lady Amanda 3rd, she was Lavender Lad. She traces to the famous imported cow, Acanthus, who has a large number of descendants in the United States and was the mother of many noted prize winners.

Truedale is a big boned, blocky bull carrying a wealth of flesh and weight in breeding condition about 2200 pounds. The photograph appearing on this page was taken on the Pacheco home of Truedale just after he was led out of his corral and brushed up a bit. He would show to better advantage if he were in high finish, but for the purposes of this article he is just what is wanted. Mr. Hawkins is justly proud of Truedale's record and considers himself extremely lucky in possessing him. Certainly a bull who produces a total of 61 females and 5 males in three and one half years, and a large percentage of them prize winners, all of them of the first quality, is no ordinary sire, and when the history of California Shorthorns is written some day the name of Truedale will occupy a prominent position on its pages.

## Swine Breeders Resolutions

WHEREAS recent press reports indicate that the food administrator, in an effort to stimulate pork production, contemplates establishing a ratio between the price of hogs and the price of corn, the California Swine Breeders' Association desires to direct the attention of the food administrator to the status of pork produc-

tion in California, and to offer certain suggestions.

California is not producing sufficient pork to supply home demand and annually imports \$30,000,000 worth of pork and pork products.

At present the swine industry of the state is not increasing, but decreasing.

The shortage of all kinds of hogs is

## Santa Anita Rancho

Anoakia Breeding Farm

**ARABIAN THOROUGHBREDS:** Two-year-olds, sired by Imported Stallion Ibn are the choicest thoroughbred mares on Santa Anita Rancho.

**SADDLE HORSES:** Some of which were sired by Ibn Mahrudd, world renowned imported desert saddle stallion, and Don Castano, a five-gaited Kentucky saddle stallion. These horses are mostly three-year-olds.

**POLAND-CHINA AND BERKSHIRE BOARS:** Four to nine months old. Sired by famous Poland-China herd boars, Banker's Boy and Glenview Wonder. And Berkshire boars, Kintyre Laird, Grandson's Duke and Fashion's Longfellow 5th. The dams are from the best blood lines. Most of these animals have winnings at World's Fair. Write for catalogue.

**HOLSTEINS:** We will sell a number of young bulls. Some sons and grandsons of the noted female State Record Cows. Write for details.

## WHEN BUYING BULLS

Do you consider the dam's production?  
Do you value transmitting ability?  
Do you care if the bull's dam tests high in fat per cent?  
Do you like mostly white colored animals?  
Do you want something choice at a reasonable price?

If so, communicate with me at once, or visit my ranch and be satisfied.  
Herd sire: PRINCE RIVERSIDE WALKER, son of Prince Gelsche Walker, the greatest proven sire in the West, and whose dam made 808.82 pounds butter in one year and whose half sister made 1095.1 pounds butter in one year.

W. J. HIGDON

Tulare, California

## Shorthorn Cattle and Berkshire Hogs

Shorthorn herd headed by Count Glory 426982, grand champion at the California State Fair, 1916. Berkshire herd won Premier Exhibitor's banner at P. P. I. E.

514 Hearst Building  
San Francisco

CARRUTHERS FARMS  
Mayfield, Cal.

marked,—not only were 1917 spring litters below normal, but due to the high price of grain, swine raisers are marketing their brood sows, and unless this practice is stopped the decrease in 1918 spring litters will be at least 20 per cent below normal.

This sacrifice of breeding stock has been brought about because of the high price of grain and a lack of courage on the part of breeders and feeders to put high priced grain into hogs until they are assured that they will receive a profit on their feeding operations.

We would, therefore, urge that the first step necessary to increase the supply of hogs should be along the line of stabilizing hog prices on such a basis that the producer will be assured a profit. This we regard as fundamental.

This association notes with satisfaction and approval the recommendations submitted at the recent convention of hog growers held at Waterloo, Iowa, in which it was proposed that the food administrator, through an appointed commission of experienced

men, should ascertain the cost of production of hogs (the production cost to cover the grain and other feeds consumed, labor, interest, shelter, and particularly the risk from disease and death), and those costs to be measured in bushels of corn.

This association would urge that the consideration given the corn belt hog growers be extended to California producers, and that in view of the fact that barley is the most important hog feed in this state, and that pound for pound barley is not the equal of corn in hog feeding operations, that in arriving at the proper ratio between feed and pork at least eight cents of barley be figured the equivalent of 100 pounds of live hog, and that either the price of barley or hogs be established on such a basis as will place the California hog grower on an equal footing with high producers of the Middle West.

This association further urges that in the event a commission to determine the cost of production is appointed, that at least one representative hog grower be named on said commission.

## Anthrax

**O**WING to prevalence of anthrax and the deadliness of this disease subscribers have asked for information as to it and we quote from "Anthrax or Charbon," written by Henry J. Washburn, bacteriologist, and published by the bureau of animal industry, United States department of agriculture, Washington, D. C., which bulletin, we believe, may be had for the asking.

From its general statement we quote: "Anthrax, or charbon, is an acute infectious disease affecting ani-

mal will often bring about a cure, but at present this serum is not readily obtainable.

"The most effective method of dealing with anthrax is by prevention. The preventive measures recommended are (1) protecting individual animals by vaccination and (2) burning or deeply burying the carcasses of animals that have died of the disease, so as to avoid infecting the ground."

As to treatment the bulletin also says: "Medical treatment of anthrax in animals has not proved satisfac-

Dependable Motive Power

mals and occasionally man. Cattle and sheep are most susceptible, and none of the domestic animals are exempt. It is caused by a germ which multiplies rapidly in the body, especially in the blood, and produces poisonous substances which cause death. The germs probably are most commonly taken in with food, though they may gain entrance also through wounds. In what is known as the spore form they are very resistant to heat, cold, and disinfectants, and may survive in the soil for years.

"The symptoms of anthrax vary greatly, according to the acuteness of the attack. The early stages usually are characterized by high fever, rapid pulse, and labored breathing. In the most common form of the disease there are also local external swellings or tumors. Death ensues in from a few hours to several days.

"Medicinal treatment is usually of no avail in acute cases. When the progress of the disease is not too rapid, the injection of antianthrax ser-

um will often bring about a cure, but at present this serum is not readily obtainable. In cases of local anthrax, incision of the swelling followed by the application of disinfectants sometimes gives good results. In such cases, however, the danger of disseminating the infection through discharges from the wound would tend to make this inadvisable, unless great care is taken.

"Good results have been obtained from the use of serum in the treatment of the disease. For this purpose 30 to 100 cubic centimeters should be administered beneath the skin or into a vein. If no improvement is noticed within 24 hours the injection should be repeated. In a number of instances afforded to test the curative value of the bureau serum in cases of anthrax in man and in animals splendid results were obtained."

Formation of community hog chowera prevention associations is war organization not to be overlooked.

Don't let rats in your corn crib eat holes in our national defense.

# The Pacific Northwest Shorthorn Breeders' Association

Annual Fall Sale

At Portland Union Stock Yards

# Unusual Holstein Offering!

Our consignment to the Quality Sale, Sacramento, December 5, 1917, consists of the following ten highly bred animals, all of show ring type and quality.

Miss Korndyke Mercedes

Miss Korndyke Mercedes 121428, Grand Champion cow—California State Fair, 1917. Heavy in calf to King Segis Alcartra Abbekerk, a 30 pound son of the \$50,000 Bull.

Miss Pontiac Nudine of Springvale 175955, who has a 30 pound record made at five years. Heavy in calf to King Segis Alcartra Prilly, a 30 pound son of the \$50,000 Bull, and Grand Champion Bull at California State Fair, 1917. Also a yearling daughter of this cow by a 30 pound sire and bred to King Segis Alcartra Prilly.

Oakvale Jennie Korndyke 173499. A five year old cow with a 27 pound record, who has a 30 pound full sister. Heavy in calf to King Segis Alcartra Prilly.

Two daughters of the \$50,000 King Segis Pontiac Alcartra. One from a 31.35 pound dam—one whose first seven dams averaged over 31 pounds butter in seven days. Both bred.

A daughter of King Walker 5th and out of a 30 pound cow. Safe in calf to King Segis Alcartra Prilly.

A daughter of the great sire It and from a 27 pound three year old daughter of King of the Pontiacs. Bred to King Segis Alcartra Prilly.

A daughter of King Mead of Riverside and from a 23.63 pound dam, whose dam is a 30 pound cow. Bred to King Segis Alcartra Prilly.

A great young bull born January 11, 1917. A high class show bull whose dam is a 31.70 pound five year old, and capable of increasing present record. His sire Spring Farm King, who is a 34 pound son of King of the Pontiacs and a full brother to the first 44 pound cow K. P. Pontiac Lass. The records of the first three dams and the sire's full sister of this bull average 34.41 pounds butter in seven days.

### TRACTOR AND IMPLEMENT DEMONSTRATION

Continued from Page 491

buying this power. Horses may not be so high to purchase but their feed costs like blazes. The demonstration shows further the splendid result of cooperation on the part of the dealers. We have had in previous years several demonstrations of individual tractors, but none largely attended nor exciting much interest. When all can be seen in the same tent and working on the same field, both interest and attendance are assured. The dealers who cooperated and the tractors exhibited are as follows:

Address is San Jose unless otherwise stated: Barney Motor Company, Gilroy, Avery; Bean Spray Pump Company, Bean Track-pull; John Leonard, Santa Clara, Best; L. Artana & Son, Fageol; W. J. Benson & Company, Yuba Ball Tread; Garden City Implement and Vehicle Company, Holt Caterpillar and Universal; Latham, Davis and Company, Cleveland; Harrison P. Smith, Samson; Joshua Hendy Iron Works, Sunnyvale, Invinible.

### TUBERCULIN TESTED

Sales Manager C. L. Hughes writes as to quality of the stock offered at the Sacramento Holstein sale by the California Breeders' Sale and Pedigree Company.

In the third Sacramento sale of registered Holsteins, held here on October 30-31, the cattle from seven consignors were originally tuberculin tested by five veterinarians. After the sale a number of purchasers availed themselves of the privilege of retest which was offered at this sale, and cattle from five consignors were tuberculin retested by two veterinarians. The result showed that there was not a single tubercular animal in the lot, and as the original tests were made by the same veterinarians who have tested the cattle at the former sales of this company, we believe this retest has proved a high testimonial to their thoroughness and efficiency in helping us to offer only sound, healthy cattle to the buying public.

### PACIFIC INTERNATIONAL LIVE STOCK SHOW

The Pacific International Live Stock Show to be held at North Portland during the week of November 19 will wrest from the American Royal Stock Show at Kansas City the distinction of being the greatest stock show west of the Mississippi River and second only to the famous Chicago International.

In beef classes alone the Pacific International will be the greatest purebred stock show held in the United States this year, there being a total of 46 Shorthorn, Hereford and Aberdeen Angus herds entered. Dairy cattle, sheep, hogs and horses will also be well represented.

### SHEEP IN THE WARM VALLEYS

The Cultivator has been receiving requests for information as to the advisability of raising sheep as a side line on ranches in the interior valleys. While we know that some of the finest sheep on the Coast are raised in these warmer sections, we wrote Charles A. Kimble, Kings County sheep breeder, and he writes of sheep doing well under these warm valley conditions as follows:

"From my experience I believe that the C. type of Rambouillet or their cross with either Hampshire or Shropshire will give good results. You want a fleece that does not carry too much grease and yet it should be of sufficient density to give a good covering to the body. I have a range over near Coalinga where it gets pretty warm, 120 sometimes, and no shade, and our sheep do very well."

We have word from the secretary of the Pacific International Livestock Exhibition which will be held in North Portland, November 19-24, that the show will this year have a great showing of California pure breeds. Jack London Estate, Hawkins & Son, Alexander & Kellogg, Wm. Carruthers, H. M. Ellberg, T. T. Miller, University of California and others will exhibit. The effort of the Northwest people is to make this show a rival of the Great International at Chicago.

## Moorland Sir Cristeria

BORN NOVEMBER 1st, 1916

FOR 1000  
DOLLARS

# The Average Per Cent of Fat of His Three Nearest Dams, 5.16, is not Excelled by Any Sire on the Pacific Coast

The seven day records of his five nearest dams average, butter, 29.37 pounds.

He is a son of COLANTHA SIR PONTIAC AAGGIE, one of the four leading sires of California, who is the sire of 14 A. R. O. daughters, seven above twenty pounds, one a 32.87 pound Junior Three-Year-Old whose average test was 6.33 per cent. One of his sons won first at the California State Fair this year.

His dam, LADY CRISTERIA MECHTHILDE, was selected by Messrs. Hughes, McAllister and Morris for the December Guaranty Sale, and has a record of 26.93 pounds butter; she is by De Kol Spofford Promise and from CRISTERIA OVERTON MECHTHILDE SRD, who has a record of 28.43 pounds butter.

He is ready for service, well grown, long-bodied, more white than black and unquestionably a youngster of exceptional promise.

# HOLSTEIN BREEDERS' GUARANTY SALE

Will place at the disposal of the highest bidder the highest class group of registered Holsteins ever offered in one sale in America. That is a strong claim, but we are willing to leave its justness to any capable judge after an examination of the cattle and their pedigrees.

Space will not permit a detailed description of every one of the eighty individual attractions that make up this greatest of all Holstein sales, but a part of them are here briefly sketched:

A beautiful 32 pound cow that will make around 1200 pounds butter on semi-official test this year.

A 31.22 pound cow, now fresh, that is a great breeding cow as well as a wonderful producer.

A 31.28 pound cow that is one of the best candidates for a very large record. Bred to it.

A great 30 pound cow in calf to King Segis Alcartra Prilly, Grand Champion at 1917 California State Fair.

A 30 pound daughter of King Segis De Kol Korndyke. Now fresh.

A 30 pound cow that made 19,981.8 pounds milk and 786.9 pounds butter in one year. Bred to Prince Alcartra Korndyke, son of Tilly Alcartra.

Miss Korndyke Mercedes, Grand Champion at 1917 California State Fair and Fresno District Fair, and she is a 24.56 pound daughter of Hengerveld De Kol.

A daughter of King Korndyke Sadie Vale out of a 26.68 pound junior four year old daughter of a 34 pound three year old. The seven nearest dams of this heifer average 34 pounds butter in seven days, the second highest average in the world. Bred to it.

Five daughters of King Mead of Riverside, out of dams with records up to over 31 pounds. These are the first daughters of this sire ever offered either at public or private sale.

Four daughters of Segis Pontiac De Kol Burke, out of dams with records up to over 31 pounds butter in seven days. His first two year old daughter to finish yearly test will make over 925 pounds butter, the California record by a wide margin.

Three daughters of Prince Gelsche Walker the sensational young sire of a 36 pound junior three year old and a 34 pound junior four year old.

A daughter of it, out of a 26.48 pound junior three year old daughter of King of the Pontiacs.

A daughter of Annie De Kol Lakeside Model out of a 30 pound dam.

Two daughters of the \$50,000 bull King Segis Pontiac Alcartra, one of them out of a 31 pound dam.

A daughter of King Segis Pontiac out of a 30 pound dam.

A 25.77 pound three year old daughter of a 34 pound cow.

A 22.75 pound junior three year old that was Grand Champion at Riverside District Fair.

A daughter of Prince Gelsche Walker Korndyke out of a 28 pound dam.

A 21.59 pound daughter of Tidy Abbekerk Prince in calf to one of the best sons of King of the Pontiacs.

A daughter of a 32 pound cow that will make over 1200 pounds butter this year.

A granddaughter of King Korndyke Sadie Vale out of the California State record two year old K. P. Tola Joe, 27 pounds butter in seven days and she a daughter of King of the Pontiacs.

A 26.93 pound daughter of a great 28 pound cow.

Two daughters of King Morco Alcartra, out of daughters of Prince Gelsche Walker.

A daughter of King Korndyke Pontiac out of a 31.91 pound daughter of Korndyke Queen De Kol's Prince.

A great 26 pound cow that made 815.38 pounds butter in one year.

A granddaughter of King Korndyke Sadie out of a 19.51 pound two year old daughter of a 29.09 pound sister to two 30 pound cows.

A daughter of Admiral Walker Prilly, son of the five times 30 pound cow Lottie Walker Spofford, out of a 26 pound cow that made over 800 pounds butter in one year.

A 23 pound daughter of Annie De Kol Lakeside Model out of a 29 pound dam.

A daughter of Segis De Kol Pontiac Burke out of a 29 pound dam.

A richly bred 28 pound cow heavy in calf to a 30 pound son of Sir Veeman Hengerveld.

A 27 pound cow that milked 683.3 pounds in seven days.

A great 28 pound cow heavy with calf to a 32 pound son of Segis Pontiac De Kol Burke.

A beautiful two year old daughter of the above cow, that made 19.44 pounds butter in seven days as a senior yearling and milked as high as 63.6 pounds in one day.

A daughter of King Pontiac Segis Korndyke out of a 33 pound daughter of King Hengerveld Aaggie Fayne. She made over 20 pounds butter in seven days as a two year old.

A number of highly bred cows and heifers that already have good records, and will be fresh and tested again before sale date.

## To the Breeder Wanting a Real High Class Herd Sire This Sale is the Opportunity of a Lifetime

Only ten bulls will be offered, and every one has been selected because of his evident fitness both as to breeding and individuality to head the best herds.

A son of the 36 pound junior three year old, Miss Valley Mead De Kol Walker, and she will make around 1100 pounds butter on yearly test this year. There is a fortune in this bull for some breeder.

A son of King Valdessa, son of the great 41 pound cow Valdessa Scott 2nd, out of the world's record heifer FINDERNE Soldene Hengerveld, 35.33 pounds butter in seven days with first calf.

A beautiful, mostly white, show quality son of King Mead of Riverside out of a 33 pound cow that made over 1000 pounds butter in one year.

A son of King Valdessa out of a 30 pound daughter of the great King Hengerveld Aaggie Fayne.

A son of Spring Farm King out of a 31.70 pound dam that is a candidate for a much larger record.

A splendid young son of a great 32 pound cow that will make about 1200 pounds butter this year. You will like this fellow.

A son of Prince Aralia Walker, he by Prince Gelsche Walker and out of Aralia De Kol 3d who is now making a yearly record that will go above 1100 pounds butter and she is out of the former world's record cow Aralia De Kol. The dam of this beautiful youngster is a 25 pound three year old daughter of a 34 pound daughter of Sir Skylark Ormsby Hengerveld.

A son of Prince Gelsche Walker out of a 27 pound four year old. He is a good one, and sons of Prince Gelsche Walker will never sell lower than right now.

A great young son of King Morco Alcartra, son of Tilly Alcartra, and out of a 23 pound two year old daughter of Prince Gelsche Walker, and she is one of the most promising daughters of her sensational sire.

A most attractive grandson of King Korndyke Sadie Vale out of a 29 pound cow that has a 34 pound three year old daughter.

## Every Animal in This Sale Tuberculin Tested and Guaranteed Against Tuberculosis for 60 Days. Every Animal Guaranteed to be a Breeder.

Nothing has been left undone to make the substantial investments which these animals are worth safe for the buyer, and it is indeed the opportunity of a lifetime to secure the foundation upon which to build for fame and fortune in the Holstein business.

## Elliott-Brant Rancho Guernseys Are Persistent Producers

The results of our first two years of official testing show our herd to average 10,172.28 Pounds of Milk and 507.97 Pounds of Fat. One half of these cows were heifers with first calf who averaged 8,670.24 Pounds of Milk and 436.01 Pounds of Fat (only seven pounds under the average of all A. R. records). Our mature cows averaged 12,710.5 Pounds of Milk and 621.52 Pounds of Fat (120 pounds over the average of the mature cows of the breed).

A bull from these cows will increase the production of almost any herd.

**Elliott-Brant Rancho, - Owensmouth, Cal.**

## Itchen Daisys May King of Langwater 129997

(The Famous \$8,000 Sire)

The purchase of this great bull to be used in our herd at the highest price ever paid for a sire of the breed was only made after due consideration of his breeding and ability to transmit high production to his daughters. We believe he will prove his worth as time goes on, and he will be given every opportunity to do so. His limited number of daughters, all owned by Eastern breeders, have made remarkable records on their first test, and they are almost impossible to buy. Watch this space for detailed information about this bull from time to time. We desire to keep his name before the trade. His first calves will not come before next year but we will book orders for males only at this time.

## Field Notes From the Live Stock Men

Fred Gatewood, Fresno Poland-China breeder, is increasing his herd as rapidly as possible. His boar is Smooth Progress, a boar he got in Iowa last year.

Ed Sattison, Tulare County, has six Guernseys on official test and expects to make some nice records. Mr. Sattison's herd is strong in the Glenwood blood, the females of which are very scarce.

J. Bidegary, Fresno sheepman, sold 132,000 pounds of wool this year. He has 1500 pure bred Rambouillets and 400 Hampshires. The three thousand yearlings running in two pastures are worth seeing.

C. I. Starr showed Jerseys for the first time at the recent Kings County fair and won several prizes. His senior champion bull, Financier of L, is a good individual and comes from a big producing family.

At the Shorthorn meeting during the Land Show plans were discussed for the big combination sale to be held sometime in February. About 70 head will be offered and they will be the best to be found in California.

The beef breeders have been a long time waking up to the possibilities of combination selling, and once started it will grow just as fast as it has grown in other parts of the country. Details, dates, auctioneers, etc. will be published as soon as possible.

H. C. Muddox, president Citizens National Bank, Sacramento, is one of the recent additions to California Holstein circles. He is interested in a deal for a 1400 acre ranch just south of town, and if it goes through will stock it with cattle, sheep, and hogs.

Bill Bemmerly sold 15 head of his fine heifers to Ben Quigley of San Luis Obispo County during the land show. In fact the exhibitors were swamped with inquiries at that show and many important sales were made. Bemmerly is just about sold out of this year's crop.

J. S. Phillips, Fresno County Holstein breeder, has named his ranch Alana Holstein Farms. He has a small but select string as a foundation and exhibited them at the fair this year. Official test work will be conducted as soon as he can solve the labor problem.

Alex McCarty's young Poland-China boar purchased by Prof. Thompson in the East arrived at Riverina in only fair shape. It will be some time before he is right. He lost considerable flesh, but even in his poor condition one can see the possibilities for a great sire, and his owner expects much of him.

The scarcity of Guernsey females on the Pacific Coast is remarkable. Demand has exceeded supply for years and it will be some time before it is satisfied. There are other breeds perhaps which are to be found in larger numbers but considering her small number in this country the Guernsey cow in production performance is in a class by herself.

Four California Shorthorn herds at least will show at Portland during the Pacific International. Miller, Caruthers, Pacheco, and the Jack London ranch will fly California colors. Frank Brown said that for every herd we sent to Portland this year one would come to California next year. With big shows a certainty in California as soon as conditions are normal this friendly feeling between breed-

## THE BEST LINIMENT

OR PAIN KILLER FOR THE HUMAN BODY

## Gombault's Caustic Balsam

# Send in Your Names Boys

We Give Away Motorcycles and Other Valuable Prizes—Over \$500 in all.  
This is the Easiest Way to Get One.

Many have already secured machines by this easy plan. We pay for the work you do and you can work just during spare time. Write us today about it.

## Do You Want a Motorcycle?

Wouldn't you like to have one of the new 1917 \$290 Thor motorcycles without its costing you a cent? You can have one. California Cultivator is going to give away over \$500 in prizes in return for doing a little work that you can easily do just during your spare time, including this Thor motorcycle. The Campaign Manager has already given away 11 motorcycles that were secured with far less dollars in subscriptions than the same machines would have cost in dollars of a dealer. This is the easiest way to get one. Send us your name and address at once on the blank below so we can write and tell you all about it. This places you under no obligation to us whatever. You do not even have to be a subscriber to California Cultivator. High school students, farm boys, workmen, linemen, teachers and everybody can take part. There are lots of prizes and cash pay.

Here is an opportunity that you can make worth a good many dollars to you, if you will only take advantage of it. Someone is going to get this motorcycle—why not you? It might just as well be you as anybody and no harm will be done in trying. We are ready to turn over to you in Cash and Prizes what we would pay others for doing this work for us and you can do this work easily during your spare time.

This motorcycle will give you more pleasure than anything of equal value that you could own. Many others have already been given away, that were easily and quickly won, and the winners were very glad they saw the announcement like this and sent in their names. We had never heard of anyone of them before and none of the winners had ever taken a subscription before or done anything of this kind. You have just as good an opportunity as anyone else to win this \$290 motorcycle, the latest model new 1917 machine—the very best you could get. Will you try? It costs you nothing to enter this campaign.

Arthur Alliston of Whittier won the motorcycle given away Dec. 31, 1916 with far less dollars in subscriptions secured than the motorcycle would cost of a dealer. Here is what he says:

Whittier, Cal., Jan. 30, 1917.

Gentlemen: I entered the campaign which has just been completed by the Cultivator Company and was successful in winning the \$290 Indian Motorcycle.

The campaign was fair and square in every way and I was very much pleased with the way it was carried on. I would advise anyone that has little spare time to enter the next one which is soon to start. It is a valuable prize for a small amount of work.

Yours truly

ARTHUR W. ALLISON.

Use this blank and send in your name and address at once so we can write and tell you all about it. This places you under no obligation to us whatsoever.

## Fill out this Free Entry Coupon and Mail Today

Manager California Cultivator Motorcycle Campaign, 115 North Broadway, Los Angeles.

Dear Sir—Please send me free of cost full information about the \$290 Thor Motorcycle and other prizes you are going to give away.

My Name .....

My Address .....

In Care of .....

Street or R. F. D. .... State .....

## YOU WON'T KNOW HOW EASY IT IS UNTIL YOU START

You never will know how easy it is to win one of our motorcycles or how much money you can make until you enter and get started, which requires that you send your name and address for full information about the prizes and campaign. You might just as well become the owner of this motorcycle as anybody. You can have just as much fun with it as with an automobile and the cost of operating it is much less, and it will be given away absolutely free, freight charges prepaid. Sign and send the blank at once to Manager Motorcycle Campaign, California Cultivator, 115 North Broadway, Los Angeles, Cal.

## THIS IS THE BIGGEST PRIZE LIST WE HAVE OFFERED

This is the biggest prize list we have offered and everyone taking part not winning one of the big prizes will be paid in cash for the subscriptions they secure. The campaign will start soon. A certain number of points will be given for each subscription you secure and the boy or man having the highest number of points by 6 P. M. Monday, December 31, 1917, will be awarded this \$290 Thor Motorcycle. The Second highest will receive a \$125 Miami Motor bicycle, third highest will receive a \$30 talking machine outfit, fourth highest will receive a \$30 gold watch, fifth and sixth highest will each receive \$45 college scholarships, seventh highest will receive a \$15 gold watch. In case of a tie for any prize, prizes of equal value will be awarded to those in the tie. The \$290 Thor '17 Motorcycle is guaranteed to be new and in absolutely first class condition by California Cultivator.

## Highly Pleased With Their Machines.

### WELL REWARDED FOR THE WORK DONE

Anaheim, Calif., June 8, 1917.

Manager, Motorcycle Campaign.

Dear Sir: In regard to the motorcycle campaign finished a short time ago in which I was successful, I wish to thank you for the kind attention paid me throughout the campaign and the fair and square way in which it was carried on. I want to say that anyone entering one of your campaigns will be well rewarded according to the amount of work he does, as there are a number of different prizes all worth working for, and the business experience is beneficial.

Yours sincerely,

OTTO LENZ.

### SAYS IT'S EASY TO WIN

E. B. Preedy won one of the motorcycles given away February 28, and is highly pleased with his machine and the ease with which he earned it. Here is what he wrote:

Manager Motorcycle Campaign:

Dear Sir: I received the motorcycle, and it is sure a dandy. It is easy to handle. I have not found a place it won't pull. I would advise every boy to get busy on the next campaign, for it is easy to win and everything is straight.

—E. B. Preedy.

### HE LIKES HIS MACHINE

Manager Motorcycle Campaign.

Dear Sir: I am writing to let you know I received the first prize motorcycle and sure am pleased with it. It sure is a dandy. It was worth working for, and I also say the way you managed the campaign was sure on the square, and I think others who may enter one of your campaigns will say the same, and I hope those who enter will win out as easily as I did.—C. S. Kelley, March 29.

### MORE THAN PLEASED WITH HIS MACHINE

Manager Motorcycle Campaign.

Dear Sir: I received the motorcycle yesterday and I am more than pleased with it. I have ridden it about fifty miles. I want to thank you and the company for the machine and the promptness in sending it to me. The campaign was carried on absolutely fair and you did everything that you said you would do. My winning has caused great enthusiasm here among the young folks, and everyone thinks my machine is great. I am going to get my picture taken with the machine soon and I will send you one. Again thanking you for your honesty and kindness to me, I am, yours truly—Perle Tilley, May 12.

# The Morris Consignment Holstein Breeders' Guaranty Sale

Sacramento, Dec. 5, 1917

## Fourteen of the Best We Own

Two of the choicest daughters of PRINCE GELSCHÉ WALKER in calf to SIR AAGGIE DE KOL ACME and KING MORCO ALCARTRA, whose dams are both world record cows. One of these is full sister to a 23 pound junior two year old that made almost 95 pounds in 30 days. They are sisters to a 36 pound junior three year old and a 34 pound junior four year old.

Three excellent daughters of KING MEAD OF RIVERSIDE in calf to SIR AAGGIE DE KOL ACME and PRINCE GELSCHÉ WALKER. They are sisters to AAGGIE ACME OF RIVERSIDE 2D that has just completed the world's strictly official record of 1331.64 pounds butter in one year and 2424.74 pounds in two years.

Three outstanding daughters of SEGIS PONTIAC DE KOL BURKE in calf to SIR AAGGIE DE KOL ACME and PRINCE GELSCHÉ WALKER. Their half sister ARAIA DE KOL PONTIAC MEAD is just finishing a record of 930 pounds butter as a two year old, the record for the Pacific Coast and sixth highest of the breed.

A beautiful three year old daughter of ARAIA King out of a 32.76 pound junior four year old who has six 30 pound sisters. Due to calve about sale time to KING MEAD OF RIVERSIDE.

A 27 pound four year old that has four 30 pound sisters, heavy in calf to PRINCE GELSCHÉ WALKER.

A splendid daughter of ARAIA DE KOL PONTIAC SEGIS out of a 25 pound four year old daughter of a 28 pound cow, bred to KING MEAD OF RIVERSIDE.

TOP NOTCH HERD SIRE. A beautiful white bull by that outstanding sire, KING MEAD OF RIVERSIDE and out of a 33 pound dam with a yearly record of 1003 pounds butter. A full sister to this youngster now in yearly test promises better than 1000 pounds.

Every animal in this offering has been carefully selected. They are the kind we would greatly prefer to keep, the very families that we are striving to develop and no matter what they bring their sale will mean a distinct loss to our herd. It is the first time that daughters of King Mead of Riverside and Segis Pontiac De Kol Burke have been offered for sale and they will be harder to buy in the future.

**Seed & Plant Co.**  
326-328-330  
SOUTH MAIN STREET  
LOS ANGELES, CAL.

When writing advertisers, mention The Cultivator.

ers of both sections will be of great value to the breed as a whole.

California now has 46 Holstein cows who have made better than 30 pounds butter in seven days. This is a remarkable showing but is as nothing to what it will be in the near future. One of these days we will be reading about the forty pounder. Already there are several who have made more than 35 pounds. We are not going after the short time records exclusively either. We have world's strictly official butter record and several cows which have held world's records for one year's production.

## Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Blvd., Los Angeles, are without charge. For immediate mail answer remit \$1.00. In writing questions give full symptoms or particulars of injury of animal. Unsigned communications receive no attention.

### Lock Jaw

I have a hog that can not open his mouth to eat thick food. It can only drink milk. The jaws seem to be locked. What can I do for him? — Subscriber, Cordelia.

Probably it is lock jaw, known in the books as tetanus. Very little can be done for the hog. He will probably recover without any treatment.

### Cough (Probably Tuberculosis)

We have a cow that will be fresh in about 30 days that is giving bitter milk and has a bad cough. Milk is not bitter when fresh but becomes so after standing 12 hours, and the butter will not separate from the cream. Cough is worse at times and the veterinarian says it is probably due to foxtail in the throat. Had swollen jaw which was blistered and lanced several months ago with no apparent improvement in the cough. Her appetite is poor and irregular. Feed bran, beet pulp, oat hay and alfalfa. What can be done for her? — Subscriber, Covina.

The cough and the condition of the cow as you describe it would lead one to suspect tuberculosis to be the cause of all the trouble. Have her tested by someone who knows his business. If the test does not show tuberculosis present then give her a good physic and change her feed.

### Glanders

Near here a number of horses have died in an open pasture of an apparently contagious disease. These animals have lived about one month after the first symptoms of the disease appeared. It first begins with sluggish movements and drooping the head. They also become covered with running sores. What it is? — Subscriber, Devore.

Probably it is glanders. It should be looked after by the state veterinarian. When the ulcers formed in the nose and about the head it was formerly called glanders but when the ulcers formed on the body and legs it was called farcy but it is the same disease, only attacking the lymphatic glands in a different part of the body.

### Breeding Hogs

How old should hogs be before you can breed them? — Subscriber, Cordelia.

Hogs should not be bred before they are eight or ten months old. Breeding them earlier is likely to stunt the growth.

### Indigestion

I have some pigs about four months old. Some are doing fine while the rest are not. They are not growing and grit their teeth a great deal. I thought they had worms and gave medicine for that but it did no good. Am feeding cooked barley, potatoes and corn meal three times a day and give them greens out of the garden and alfalfa hay. — Subscriber, Marina.

Probably it is indigestion. Change the feed by stopping the potatoes and give the barley and corn dry for a time. If you could get some good sour milk for them it would probably set them right very quickly.

### Irrigation Law

Where can I get a copy of such laws pertaining to irrigation as the secretary of a water company should know to conduct the business in a legal manner? Is there such copy printed or free distribution? — Subscriber, Colton.

The secretary of state of California in years past caused to be published a book termed "Corporation Laws of California" which he distributed to certain applicants. This book was a great compendium of the various code sections pertaining to corporations of various kinds. There are several good manuals of corporation management providing forms for the ordinary pur-

poses of corporations, the names of which you can undoubtedly procure by writing to Bancroft-Whitney Company at San Francisco; such manuals are of various degrees of excellence, size, and price. Care, however, should be taken in the use of legal forms by one who is ignorant of the meaning, purpose, and effect thereof as their use has been one of the most prolific sources of litigation.

### Fencing County Road

Bordering my land there is a canal; on each side of the canal there is a road used by the public almost to the exclusion of the county road which is laid out between the canal company road and my land. Owing to the fact that the public uses the canal company's roads the county refuses to keep the county road in condition for travel. The county road was taken off my land. Everybody here pastures on the roads. If I could fence this county road bordering my land I would have about a quarter of an acre for pasture. Can I so fence it?—Subscriber.

Under the peculiar conditions existing in your case it might be well to take the matter up with the supervisor or, as he is otherwise termed, road overseer for your road district. The board of supervisors are empowered in their discretion to provide for the construction of gates on the public highways and to provide rules for opening and closing the same, provided that the expense shall be borne by the party for whose immediate benefit the same is ordered. In case such consent of the board is obtained anyone who opens and leaves open the gate or wilfully and unnecessarily rides over the ground adjoining the road on which the gate is erected forfeits to the injured party treble damages. If you do not obtain such consent of the board the road overseer of the district may require your fences to be removed, and if you do not comply within ten days from date of oral or written notice you are liable to a fine of ten dollars for each day it remains in place.

### Subleasing

What is the procedure in subletting a five acre tract which is set to trees? Under my lease I am to care for the trees and have the use of the ground between the rows. There is nothing in the lease against subletting. Am I required to procure owner's consent? Am I responsible to the owner if I sublet the land?—Subscriber.

You are doubtless entitled to sublet the property, but this does not affect your liability to the lessor and you could certainly be held for any injury, resulting from the acts or omissions of your sublessee; you in turn can hold the sublessee. The only method by which you could avoid this liability would be to have the subtenant accepted by the lessor as his immediate tenant.

### Unfulfilled Contract

If a contract purchaser of land makes a few payments and then discontinues and the contract is cancelled, has the seller any claim against other land belonging to the buyer for the unpaid balance upon the contract?—Subscriber.

If the purchaser discontinues payments and the seller elects to cancel the contract and recovers the land; then that contract is at an end and neither party has any rights under a properly cancelled contract. If, however, the seller elects to hold the party to his contract he is entitled to bring suit for the balance due upon the contract. Generally these contracts provide that in case of the default in any payment the whole amount due may be declared at the option of the seller at once wholly due; in that event the seller may offer the land to the purchaser, bring suit for the whole amount, take attachment and execution upon the land, sell the same and levy upon any other land or property of the purchaser. In other words, the contract is the same as any other contract of purchase and sale and can be enforced in the same way.

### Hay on Road

If one wishes to cut hay along the county road on right of way is it necessary to get permission therefor and from whom?—Subscriber.

By taking and accepting land for a highway the public acquires only a right of way; the property itself belongs to the former owner or his successors in interest; that owner would therefore own the hay growing upon the highway, and it would be necessary to obtain his permission to take his property. On the other hand in case the hay is wild the road overseer of the district may order the highway cleared and destroyed. He might by virtue of that power give permission to clear the highway.

### Trespassing Stock Law

Will you please give the date of passage of the trespass law of this state and the place in the statutes where found. I mean in regard to a substantial fence being necessary.—Subscriber, Germantown.

There are two general acts known as "Estray Acts." One is entitled "An act concerning trespassing of animals upon private lands, and the recovery of damages resulting therefrom." This act was approved March 23, 1907, and is found in the Statutes of 1907 page 999, or Title 172, page 411, of the 1915 edition of Deering General Laws. The other act relating to estrays contains a provision for fences in the northern tier of counties only and was approved March 23, 1901, found in the Statutes of 1901, page 603, and has subsequently been amended at each session of the legislature except that of 1917; it is also found under Title 172, page 412 of the 1915 edition of Deering's General Laws.

### NEXT TRACTOR DEMONSTRATION

A meeting of the National Tractor Demonstration Committee was held at the Auditorium Hotel, Chicago, in October for the purpose of discussing the question of tractor demonstrations for next year. After a very thorough discussion of the subject, a motion was made and carried to have one big national tractor demonstration in 1918, incorporating:

1. Tests on fuel consumption in plowing, disking and other kinds of field work.
2. Tests on different types of traction wheels, wheel equipment and on tractive efficiency. To include tests running wheels in furrow, on unplowed ground, and also on plowed ground.
3. Tests on steering mechanism.
4. Tests on belt work.

The committee is of the opinion that this demonstration carried out on the lines above mentioned, should be one which will better establish the farm tractor and help develop the tractor industry. This demonstration is planned to give those interested, more detailed information as to fuel, traction and power. At least one ten-hour plowing run will be held during the demonstration. It was further decided that the committee may sanction not more than five other demonstrations at points to be decided later, which would be conducted along the lines of previous demonstration, but not include any tests.

It was the consensus of the committee to hold this demonstration at some point in the vicinity of Detroit or Cleveland, if suitable land can be found; 3000 to 5000 acres will be required in one body, or made up of adjoining fields.

## LIME and SULPHUR SOLUTION and BORDEAUX MIXTURE

are the sprays to use this time of year to kill fungous growth on peach and other stone fruits.

Crude Oil Emulsion is a winter spray to kill insects.

### Orchard Brand

is produced in our laboratories under the most favorable conditions. Our nation-wide business is built on the confidence of the fruit growers in all sections. Our continued success depends upon the results the fruit growers of America get from the use of Orchard Brand Sprays.

Your trees and your next years crop depend upon the quality of the sprays you use.

It's too serious a matter to trust to chance. Use the recognized quality for the sake of security.

Write us concerning your fruit tree troubles. Part of our business is to help make your business successful.

# The Best Laying Mash

Written for California Cultivator By Jean A. Koethen

CULTIVATOR reader writes to ask: "What is the cheapest and most efficient dry mash to feed laying hens?"

Had his question read "What is the cheapest and most efficient mash," the question would have been more easily answered, for the cheapest and most efficient mash is not a dry mash at all, but a wet mash, made up of cooked vegetables, uncooked greens chopped and mixed in, and the whole thickened with ground grain and meat meal. If the mash can be moistened with sour milk or any other kind of milk the meat meal may be omitted and the mash will be ideal for the purpose.

Such a mash is both cheap and efficient for four reasons:

It contains a variety, and variety is the spice of life with chickens even more than with the rest of us.

Such a mash may contain as much as 50 per cent vegetables and other greens, thus lowering the cost of feed while adding to its efficiency, for most hens need more of such feed than they get. Greens and vegetables keep health and digestive power at the maximum, and contain enough protein and ash to be of considerable help in egg manufacture.

When a wet mash is properly fed, that is, no more given at once than the hens can clean up in 15 minutes or less; there is absolutely no waste.

A wet mash is more appetizing; hens like it better and eat it more eagerly, with a consequent stimulation of production.

I have never quite understood why it is that a moist mash, with bits of green sticking up in it should be so much more attractive to hens than a hopper of dry mash. They actually fall over themselves in their eagerness to pick out the bits of green, and the ground grain goes with the green. Perhaps it is merely a matter of impression, the idea that anything that looks good must taste good, but hens do like a mash of this sort immensely, and appetite with a hen counts a lot. Sprouted oats make the same good impression and are eaten with the same eagerness. A hen will eat anything if she has to but I have a suspicion that food which is eaten eagerly is more effective in producing eggs than that which is eaten simply to satisfy hunger.

My correspondent asked, however, for the formula for the cheapest and most efficient dry mash for laying hens, and this I cannot give him. I wish I could. I wish I knew of some one else that could. There are many good mash formulas, all apparently equally efficient, but the cheapness of any one depends on the grain quotations for that particular day or week. Bran has always been the basis of the dry mash, and bran, being a by-product, has never gone to a prohibitive price. The same is true of wheat middlings or shorts. Shorts at \$3.15 a hundred seems dearer than bran at \$1.90, but when you consider that shorts contain more protein, more fat and less than half as much ash, it is easily to see that there is not much difference.

With us in California a wartime ration must eliminate the ingredients that are too expensive and utilize these at hand or which can be had for least money. For the present we must cut out corn meal, for that is the dearest of all ground grains. For-

tunately we can do without corn more easily than most people, for it does not suit our climate very well. Few of the published formulas contain alfalfa meal, but I understand it is coming into favor more and more. I have always used it, because it adds bulk to the ration and contains a good deal of protein. It is cheaper than any of the ground grains, and my hens like it. Ground oats vary in price and cannot always be had at any price. When they can be had reasonably, they are one of the best dry mash ingredients, indeed, at the Missouri station at one time, the only mash fed was ground oats in one hopper and beef scrap in another. I do not know how satisfactory the combination proved, but while ground oats alone might not be the best ground grain, in combination they are excellent.

It is generally considered good practice to let the mash contain twice as much bran as any other grain. The following is a good formula: Wheat bran 200 pounds, ground oats 100, middlings 100, alfalfa meal 100, beef scrap 40, fish scrap 35.

It is not necessary to use both fish scrap and beef scrap. The two together are little better than one alone, but 75 pounds of either might be used without affecting the efficiency of the mash. As the 75 pounds of animal protein is less than 15 per cent of the whole mash, a little soy bean meal, say about 25 pounds, might be added. This would increase the whole protein content of the mash without the dangers which attend excessive use of beef scrap and would narrow the ration somewhat. The vegetable meals, soy bean, coconut, oil cake and others are not sufficient alone, but are excellent when used with beef scrap or fish meal. If ground oats cannot be had, and they could not the last time I asked, try the oat chop, which differs from ground oats in that it contains the hulls while the ground oats do not. Oat chop is very good in the mash—I have been using it alone with alfalfa meal and beef scrap and part of the time some bran—but ground oats are better. If any feed seems to contain too much hull, the best remedy is an extra amount of green feed and vegetables. Our war gardens must all contain some undersized potatoes, some turnips and carrots which could not be put to a better use than by being cooked and fed to chickens. In this respect we Californians are very fortunate. We may not be able to feed corn, unless we raise it, but we can raise two vegetable crops a year.

There are so many ways of mixing mashes you just have to pay your money (if you have any) and take your choice. Only don't forget the green to go with it and a little real meat now and then, and if you should happen to have a goat or a cow, remember milk is the one best poultry feed.

Do not allow little chicks to occupy disinfected coops for at least 24 hours. The fumes arising from the application of coal tar products will kill the young chicks, but will not be sufficiently strong to injure the old hens.

### TRY THIS ONE

Needy One—"I say, old man, could you lend me a dollar for a day or two?"

Other One—"My dear fellow, the dollar I lend is out at present and I've several names down for it when it comes back."

# Poultry can be made to Pay

THERE are two methods of gaining knowledge, necessary to make poultry a success; experience—which is a long, drawn out, expensive road and the one too commonly used. Another method is by the careful studying of books written by practical poultry people who have made mistakes and successes and are willing to give this information in order that you may take the short road to poultry success.

## Poultry for Profit

BY

Jean A. Koethen

(Graduate of University of Calif.)

Gives more practical knowledge of every branch of the poultry business in a more concise and simple manner than any similar book published. With the knowledge gained by a study of this work experience in the poultry business is not as necessary. Through its guidance obstacles are overcome before it is too late.

The book is 5 1/2 x 8 inches and contains 12 chapters, with over 225 pages of text and 18 pages of illustrations, printed on egg-shell book, binding full cloth vellum de luxe.

## Storrs Egg Laying Contest

Storrs, Connecticut, report for the fifty-second week ending October 30, 1917.

The sixth international egg laying contest at Storrs was formally closed with the laying of the last egg late Tuesday afternoon by Rhode Island Red hen No. 322, from Attleboro, Massachusetts. A pen of Barred Rocks that plodded along in second place for more than 50 weeks, finally finished first. White Leghorns were in second and third places for the year, Barred Rocks fourth and Rhode Island Reds fifth. All five previous contests were won by either White Leghorns or White Wyandottes. Twice the honors went to England, then to a Pennsylvania pen of Leghorns, Connecticut and Rhode Island had their turn and now New Hampshire stands at the head of the list as can be seen from the summary below. These New Hampshire Barred Rocks entered by Applecock Farm of Fitzwilliam not only won in the contest just ended, but they have set a new high record for Plymouth Rocks as no pen of this breed has been able to equal their record in any previous competition.

The 1000 birds in the contest were of nine different breeds and varieties, and represented 16 states and two allied countries. The combined weight of all the hens was less than two and a half tons and yet they laid over ten tons of eggs. In other words, the average yield of 163 eggs for each hen was more than four times her own weight. The grand total for all pens was 163,387 eggs which is the largest number of eggs ever collected at Storrs from the same number of hens. This record is 100 eggs ahead of last year's contest and more than 11,000 ahead of the contest two years ago.

The subjoined table shows the number of birds in each breed, the average annual individual egg yield, and the average for all varieties engaged in the contest.

90 Barred Rocks	169.2
160 White Wyandottes	163.6
210 Rhode Island Reds	158.4
430 White Leghorns	167.4
110 Miscellaneous	152.1
1000 Average for all breeds	163.4

Barred Rocks also won highest individual honors. Hen No. 9, owned by Merritt M. Clark of Brookfield Center, Connecticut, laid more eggs than any other one hen in the contest. Her record for the year is 277 eggs, the best bird of the breed ever trapped at Storrs. Tom Barron's White Wyandotte, No. 268, from Catforth, England, was the best in her class with the score of 263 eggs. A. Allan's Rhode Island Red No. 463 from Newport, R. I. was high in her group with a total for the year of 249 eggs. Hilltop Poultry Yards' White Leghorn, No. 796 from Suffield, Ct., was at the top in the Leghorn division with a yield of 246 eggs. Over 165 individual birds, including Barred, White and Buff Rocks, White and Buff Wyandottes, Rhode Island Reds, Leghorns and Orpingtons, laid more than 200 eggs each during the year.

The following list shows the 20 best pens in the order of their production, also their records for the year.

Applecock Farm, Fitzwilliam, New Hampshire, 2119 eggs; A. P. Robinson, Calverton, New York, 2090; Windsweep Farm, Redding Ridge, Connecticut, 2022; Merritt M. Clark, Brookfield Center, Conn, 1991; A. Allan, Jr., Newport, Rhode Island, 1990; J. O. LeFevre, New Paltz, New York, 1967; Hilltop Poultry Yards, Suffield, Connecticut, 1950; Cloyes & Sullivan, Hartford, Connecticut, 1936; E. A. Ballard, Chestnut Hill, Pennsylvania, 1921; Braeside Poultry Farm, Stroudsburg, Pennsylvania, 1917; F. M. Peasley, Cheshire, Connecticut, 1902; Clifford I. Stoddard, Woodbridge, Connecticut, 1897; Windsweep Farm, Redding Ridge, Connecticut, 1890; A. B. Hall, Wallingford, Connecticut, 1889; Frank R. Hancock, Jacksonville, Vermont, 1881; Obed G. Knight, Bridgeport, Rhode Island, 1855; Geo. A. Standard, Ottawa, Kansas, 1845; Pequot Poultry Farm, Southport, Connecticut, 1833; Agricultural College, East Lansing, Michigan, 1830; Will Barron, Bartle, England, 1826.

## Crate Fattening Rations

Material to be used for fattening chickens in crates should depend somewhat on the cost and on the purpose for which the fowls are being fed. If a hard white fat and white skin are desired, oats and barley should make up a large part of the ration; if yellow fat and skin are desired, cornmeal should be the principal ingredient of the mash.

A simple, efficient ration for farm use consists of 60 pounds cornmeal, 40 pounds wheat middlings, oat flour, barley meal or buckwheat middlings or 40 pounds of a mixture of equal parts by weight of these materials) and five pounds of finely ground beef scrap. This mash is mixed with sour milk, either skimmed or butter milk, in the proportion of about 1½ pounds of milk to each pound of mash. The mash mixed ready for feeding should have the consistency of buckwheat cake batter. It is not necessary to mix the mash fresh for every feeding as a slight fermentation makes it more palatable and more digestible.

The chickens to be fattened should be given nothing to eat or drink for at least 12 hours after they are placed in the crates.

At the first feed only about one-third as much of the mash should be given as the chickens will eat. The amount fed should be increased at

each feed until by the fourth feed they are being given all they will clean up in from 20 to 30 minutes. After the fourth feed every effort should be made to stimulate the consumption of mash.

Feeding should be done at the same hours each day. Regularity is essential.—M. C. Kilpatrick.

### STATE BEE KEEPERS' ANNUAL

The annual convention of the California Bee Keepers' Association at Sacramento discussed marketing and the formation of an organization. No definite plans were outlined but it was unanimously decided to hold a conference of bee keepers in Los Angeles in the near future. Presumably this will result in the formation of a marketing organization which may aid in marketing the 1918 crop. The election of officers resulted in F. A. Alexander of Ontario being chosen president. He succeeds B. B. Hogaboom; M. L. Richter of Modesto was reelected secretary and treasurer. Other directors are; W. C. Kerr, C. F. M. Stone and J. O. McCubbin.

### Book Review

#### "VEGETABLE FORCING"

"Vegetable Forcing" by Ralph L. Watts, dean, school of agriculture and experiment station of Pennsylvania state college, published by Orange Judd Company, New York, \$2.00 net.

Vegetable forcing occupies an impor-

tant place in American horticulture. The subject is taught to large numbers of students, and it has enlisted the interest of thousands of gardeners who are attracted by the idea of growing vegetables under artificial conditions. To meet the needs of these two groups of people has been the constant aim of the author. This is a book of 432 pages with illustrations on almost every page, and 23 chapters packed with information as to vegetable growing,

especially growing in green-houses, hot beds, cold frames or other special structures. Amongst the illustrations are those showing glass houses covering acres, with teams, manure spreaders and other implements at work as if in the fields. The chapters touch upon greenhouse construction and heating, handling of soils, fertilizers, insect enemies and diseases, propagation, watering, heating and ventilating, marketing, then devotes a chapter to practically all the forcing vegetables from asparagus to tomatoes.

## Speed Up Your Laying Hens

Eggs are selling at way-up prices. This is your egg harvest time. Put your hens in laying trim by feeding

# DR. HESS POULTRY PAN-A-CE-A

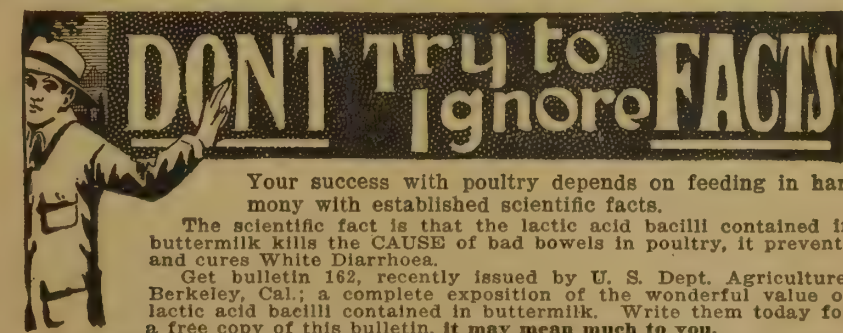

Feed your hens and pullets Pan-a-ce-a to help them turn the greatest possible amount of their feed into eggs. Feed Pan-a-ce-a to liven up the dormant egg organs and make them active. Feed Pan-a-ce-a to all your poultry to improve the appetite and digestion, to enrich the blood, to make them healthy.

There is a dealer in your town that will supply you with Dr. Hess Poultry Pan-a-ce-a. If it does not make your hens lay, he will refund your money. Packages, 25c, 50c and \$1.00; 25-lb. pail, \$3.00; 100-lb. drum, \$11.00.

**Buff Orpington, Buff Leghorns, Bourbons, Red Turkeys**—Breeding stock. **Ferris Ranch, S. Reservoir, Pomona, Cal.**

### ELGIN BOARD WILL CLOSE

At the request of the United States food administrator the Elgin Butter Board will be closed for the duration of the war. A half century ago Elgin was the center of the creamery industry in Elgin, Illinois. The small creameries in this territory, generally known as the Elgin district, were pioneers in the practice of offering their butter for sale at meetings of the Elgin board of trade which were attended by butter buyers from Elgin, Chicago and other cities.

For many years the quotations established for creamery butter were the basis on which creameries generally sold their butter and purchased their butterfat. Of recent years Chicago has absorbed the milk from the district and Elgin has ceased to be a creamery center. The few persons interested in the operation of the Elgin board have been more interested in prices than in production, and sales have not been based on actual commercial conditions governing butter or butterfat. For this reason the request to close was made, as the United States food administration thinks it advisable for prices to be more dependent upon actual market conditions.

ATTENTION!

Every Red Blooded American!

President Wilson's reply to His Holiness Pope Benedictus Peace note gives the clearest and most complete reason why the United States of America is at war with the Imperial German Government.

It is a momentous document and will go down in history as being "one great masterpiece" equal to, if not greater, than the Declaration of Independence.

Every home should have a copy framed and kept where you may look upon it with the respect and reverence it deserves.

A Most Patriotic Christmas Gift

We have reproduced this "Reply" and illuminated it in a most beautiful manner, using the highest skill known to the Printer's and Engraver's Art.

The size is 13x17 inches. Single copies mailed to any address in the United States or Canada, 60c. Two or more copies at 50c each. Stamps accepted.

THE ROAD TO FRANCE

(This stirring martial poem, by Daniel M. Henderson, a Marylander, was awarded first honors in the prize war poem competition conducted by the National Arts Club of New York City. Several thousand compositions were entered in the contest.)

Thank God our liberating lance  
Goes flaming on the way to France!  
To France—the trail the Gurkhas found!  
To France—old England's rallying ground!  
To France—the path the Russians strode!  
To France—the Anzac's glory road!  
To France—where our Lost Legion ran  
To fight and die for God and man!  
To France—with every race and breed  
That hates Oppression's brutal creed!

Ah, France, how could our hearts forget  
The path by which came Lafayette?  
How could the haze of doubt hang low  
Upon the road of Rochambeau?  
How was it that we missed the way  
Brave Joffre leads us along today?  
At last, thank God! At last, we see  
There is no tribal Liberty!  
No beacon lighting just our shores,  
No Freedom guarding but our doors.  
The flame she kindled for our sires  
Burns now in Europe's battle-fires.  
The soul that led our fathers west  
Turns back to free the world's oppressed.

Allies, you have not called in vain;  
We share your conflict and your pain.  
"Old Glory," through new stains and rents,  
Partakes of Freedom's sacraments.  
Into that hell his will creates  
We drive the foe—his lusts, his hates.  
Last come, we will be the last to stay,  
Till Right has had her crowning day.  
Replenish, comrades, from our veins  
The blood the sword of despot drains,  
And make our eager sacrifice  
The freely rendered price  
You pay to lift humanity—  
You pay to make our brothers free.  
See, with what proud hearts we advance  
To France!

WHAT THE AMERICAN RED CROSS IS DOING IN FRANCE

 IN RESPONSE to a request by Henry P. Davison, chairman of the Red Cross war council, for a complete report on the work being carried on by the American Red Cross in France the following cable has just been received from the Paris headquarters of the American Red Cross:

"We have just completed a gift of 5,000,000 francs to needy sick and wounded French soldiers and needy families of soldiers.

"We have established 20 dispensaries in the American army zone to care for the resident civilians and to improve health conditions in that section before the coming of our troops.

"We are providing a dental ambulance at a port in France for the use of our soldiers and sailors, and have organized a nurses' service for American army use.

Hospital Distributing Service

"Our hospital distributing service sends supplies to 3423 French military hospitals and is laying in a large stock for future needs; our surgical dressing service supplies 2000 French hospitals and is preparing immense supplies for our own army.

"We are operating at the front line, in cooperation with the French Red Cross, 10 canteens and are preparing to establish 20 more.

"We are operating six canteens for use of French soldiers at important railway centers where we serve about 30,000 soldiers a day, and are planning many more.

"In Paris canteens, operated by us with the French, we are serving enormous numbers of soldiers as they come and go.

Twelve Rest Stations

"We soon expect to have ready 12 rest stations for our own troops at important railway centers, also recuperation camps at suitable places for many of our soldiers.

"We are providing an artificial limb factory near Paris and special plants for the manufacture of splints and nitrous oxide gas.

"We have contracted for a movable hospital in four units accommodating 1000 men.

"A recreation in connection with hospitals and diet kitchens.

"A casualty service for gathering information in regard to wounded and missing, and a medical research bureau.

"Our work with the civil population covers mainly children refugees and tuberculosis.

Children's Refuge and Hospital

"We have opened a children's refuge and hospital at a point in the war zone where several hundred children have been gathered to keep them away from danger of gas and shell fire.

"At another point among the wrecked villages we have established a medical center and a traveling dispensary to accommodate 1200 children.

"At one point we have undertaken extensive medical work for the repatriate children, about 500 of whom are daily returned from points within the German lines.

"We have also opened a hospital and convalescent home for these children, and are also operating an ambulance service for the returning repatriates who are now coming in at a rate of 1000 a day.

Infant Welfare Stations

"We are about to establish infant welfare stations in connection with each dispensary in the nation-wide system planned by the Rockefeller Foundation.

"We have taken over and are carrying on and developing an extensive

Will You Give Your Thanksgiving Dinner to Our Soldier Boys?

Not the whole dinner, but "the fixings" just the extras that make it a feast.

Every member of the California Cultivator force has pledged himself or herself to give the cost of the extras to such a fund.

Will you join us?

If no representative of the Red Cross, Y. M. C. A. or K. of C. is near you, send to California Cultivator, Los Angeles, and we will send your contribution to one of these organizations.

Read of the work of the Red Cross in this department and note on editorial page "A True Thanksgiving."

tuberculosis work formerly in charge of Mrs. Edith Wharton and other Americans.

"We are completing for the French an unfinished tuberculosis sanitarium near Paris and are adding to the barracks erected by the city of Paris. This means adding 1000 beds to those now available for tuberculosis patients.

"We are organizing a comprehensive health center in one of the Departments of France.

"We are making arrangements on a large scale to help refugee families through the winter with clothing, beds, and shelter, and for this work the entire devastated district of France has been divided into six districts, with a resident Red Cross delegate in each, and warehouses have been established at four points, to which are shipped food, clothing, bedding, beds, household utensils, and agricultural implements.

Repairing Villages

"We are carrying on repair work in four villages in the devastated region to enable returned families to stay throughout the winter.

"We are cooperating with French agencies in various kinds of relief work in the principal agricultural centers in the devastated region and are supplying portable houses for the use of the families which have returned to this region.

"We are providing barracks to assist in the work of training disabled soldiers, and we expect to establish for them experimental agricultural stations.

The Cultivator Patterns

8596 8574

8397 8396

8582 8572

7905

No. 8596—Children's One Piece Dress. Cut in sizes 4, 6, 8, 10 and 12 years. There is a shallow shoulder yoke to which the front and back of the dress is gathered.

No. 8574—Collapsible Hat Bag. Cut in one size only. There are only two pieces to this bag, and it is very easy to make. Loops may be added to the sides so that the bag can be hung up on a hook.

No. 8397—Ladies' Blouse. Cut in sizes 36, 38, 40, 42 and 44 inches bust measure. The blouse illustrated in No. 8397 is given in two lengths—with or without the band.

No. 8396—Misses' and Small Women's Dress. Cut in sizes 16, 18 and 20 years. This is a one piece coat dress. The pockets are extended up as far as the belt.

No. 8582—Ladies' Bungalow Apron. Cut in sizes 36, 40 and 44 inches bust measure. The apron buttons at the center back and a narrow band may be used to hold in the fullness. The huge pockets are a great convenience.

No. 8572—Children's Long Waisted Dress. Cut in sizes 6, 8, 10, 12 and 14 years. The dress is to be slipped on over the head. The tiny skirt may be side-plaited or gathered.

No. 7905—Ladies' Three Gored Skirt. Cut in sizes 24, 26, 28, 30 and 32 inches waist measure. This design is in three gores that gracefully hang from a slightly raised waistline.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 c) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

"We are organizing extensive work for relief of Belgians, both children and grown people, and in this connection we are establishing warehouses near the Belgian front in order that we may be ready to assist the Belgians who may be liberated by a change in the fighting line.

#### Aiding Queen of Belgium

"We are aiding the Queen of Belgium in her work for the children and are assisting in the support of hospitals and other work for relief of Belgian soldiers.

"In addition we are bringing a certain number of children from occupied Belgium into France, where they may be cared for.

"To enable us to carry on our work we have established large central warehouses in Paris and distribution warehouses at important points from the sea to the Swiss border. In these warehouses will be stored hospital supplies, food, soldiers' comforts, tobacco, blankets and household goods, kitchen utensils, clothing, beds, and other articles for relief.

#### Supplies Arriving Daily

"Two hundred tons of supplies are arriving in Paris daily and 125 tons are being reshipped to various branch warehouses.

"Our total warehouse capacity is 100,000 tons and the warehouse personnel at present, numbers 125 men, many of whom are volunteers—American men of education and business training not eligible for military service.

"Our transportation department, with a personnel of about 400, handles our supplies and furnishes automobiles for use in our work. It has an organized force at every port in France and is able to handle about 350 tons of supplies daily.

"We use 400 motor car vehicles, 250 of which are trucks of various sizes.

"In addition we are preparing to operate a motor-bus line through Switzerland from Germany to the French border to aid in transportation of repatriates and exchanged prisoners.

"We operate seven garages and make all repairs on our own cars.

"Our transportation work is directed by men experienced in transportation work in America."

#### HOW TO SELECT FOODS

**W**HAT food shall I give my family, how much shall I put on the table at one meal, how can I serve attractive and appetizing meals at present prices, what new foods can I make use of, what is the line between economy and parsimony? All these and many other questions are before us continually. To answer them our department of agriculture through the office of home economics is sending out many helpful suggestions, as is our new food administration which has done such wonderful work already for us and gives promise that it is only just getting started.

How to feed a family of five economically on nourishing and satisfying foods is the subject of a series of articles sent out by the office of home economics, which we shall give in part through this and successive issues of the Cultivator in this department. We only wish we had more room to give more. The first of the series follows:

Adults and children must get several different substances from the food they eat or they will miss something which is essential to bodily efficiency and health. The housewife who plans her meals or attempts to save money on food without some

knowledge of these substances and of the five simple groups of foods which supply them is very liable to omit from her meals some food essential for the growth of children or to supply the family with the energy they

need for their daily tasks. Attempted economy which entirely omits certain foods may well prove a very poor investment because of its ultimate effect on the well-being of the household. Price, individual preference for certain foods, and even the fact that hunger is satisfied after a meal, are not safe guides. Tomatoes at ten cents apiece in winter are no more nutritious than they are at five cents a quart in summer. A child might crave much more sugar than would be good for him. A bulky diet of potatoes or bananas might make a person feel he had eaten enough, but would not furnish him with the elements that his body needs.

To plan out meals in the interest of family efficiency and economy at the same time the housewife fortunately does not need to do elaborate sums in calories or to have any intimate understanding of such terms as protein and carbohydrates.

The substances which the specialists find are needed in the daily diet to maintain the body may be grouped under seven heads: mineral substances, protein, starches, sugars, fats, cellulose, and certain little known but very important growth stimulating substances.

#### A Day's Food Requirements

That these essential substances are not difficult for the average housewife to provide is shown by the following combinations, which the specialists believe indicate the daily food requirements of normal individuals:

##### For a Man

A man who does fairly muscular work would be likely to get the food which his body needs if supplied daily with such a combination of foods as the following:

One and one-quarter pounds of bread (having about the same food value as one pound of such cereal preparations as wheat or rye flour, oat meal, corn meal, rice, etc.)

Two ounces, or one-quarter cup, of butter, oil, meat drippings, or other fats. Two ounces, or one-quarter cup, of sugar; or one-third cup of honey, syrup, or an equivalent amount of other sweet.

One and one-quarter pounds of food from the following: Fresh fruits and fresh or root vegetables.

Twelve ounces of food from a class which may be called "meats and meat substitutes;" that is, moderately fat meats, poultry, fish, eggs, cheese, dried legumes (beans, soy beans, lentils, cowpeas, and peanuts). Milk also belongs among these foods, but because of the large amount of water it contains, half a glass, or four ounces of it would be required to equal an ounce of any one of the others.

# PERFECTION OIL HEATER

When writing advertisers, mention The Cultivator.

A man who works hard out of doors all day probably would need more food than this, and one who sits all day at his desk would need less. The amounts given are suitable for a man who, like a salesman in a store, talks about more or less and does more or less of such work as lifting.

Next week, one day's food requirements for family of five and sample meals.

MOLLIE OF THE MANCHESTER MILLS

Written for California Cultivator  
By Mary Olmsted Lotspeich, Los Angeles

THE opening chapters of the life and love story of Mollie were begun in that far away city of mills in England, but the later ones are being lived right here in California. When she came here, her hair was as golden as the sunshine, her eyes as blue as the waters over which she sailed, her smile as sweet as the love which called her, and her cheeks as rose-colored as her dreams.

Have I been too lavish in my praise of her charms? Please take notice that I made no mention of her nose or the freckles around it! "Silence is golden" when it comes to pug noses and freckles!

Although a mill girl for years, with long hours and hard work, she had her full share of good times. Concerts and picture shows at night, singing in the chapel choir on Sundays, with delightful walks down the shaded country lanes between services, her life was full and happy. The long walk from home to mill was shared each day by her jolly sister and a neighborly boy, and here begins the love story!

The course of true love ran no more smoothly for them, however, than for any lovers, for "there were others." When Jack voiced the devotion which his actions had shown so plainly it met with no response. Seventeen-year-old Mollie was not ready to give up her freedom for years to come, and he "said him nay." Then came a "tiff" as she called it and the daily walks had two silent strollers.

Occasionally Jack would say to the friendly sister, "Susie, tell Mollie so and so" as though she was a thousand miles away!

The years and the walks and the work went on till the persistent wooing of faithful Jack won the day and Mollie was his promised wife—on one condition; he must come to America and start a home for her!

His love was equal to that test even, and "he came, saw, and conquered"—and sent for her.

If you happen to see Mrs. Jack sometime, in her happy rose-coveredungalow home with Jack Jr., playing among the flowers, ask her to tell you, as she did me, of her eight-thousand mile journey over land and sea coming wittily in the splendid Lusitania five years ago to husband, home and happiness, in beautiful sunny California.

HEROIC WOMEN OF FRANCE

By Dr. Alonzo Taylor

MY WORDS are not powerful enough to do even scanty justice to the most heroic figure in the modern world, and of ages past—the woman of France.

Of the healthy men who are not engaged in the military service in France, practically all are engaged either in transportation or in the manufacture of munitions, leaving the ag-

riculture absolutely to the women. Not only this, but they have stepped into the place of work animals; you can go into any section of France today and see women of magnificent, noble womanhood hitched to the plow and cultivating the soil. All of the agriculture rests upon their shoulders. The home, always an extremely efficient home, maintains a few old men, the wounded and the tubercular. Uncomplaining, with high devotion, with an attitude that amounts almost to religious exaltation, the woman of France bears the burden.

Now, conditions being as they are, does it lie within the heart of the American people to preserve and hold to every convenience of our life at the expense of adding an additional burden to the womanhood of France? This is the exact question that is involved in our substitution of other cereals in place of wheat.

The woman of France must be enabled to hold up the morale of the French soldier until next spring. The morale of the house decides the morale of the soldier in the fighting line. We can do this by giving them the greatest possible freedom in their food supply, and of this wheat is the chief factor.

CANADIAN WAR-CAKE

No recipe has been more popular than the one for Canadian War-cake: Two cups of brown sugar, two cups of hot water, four tablespoons of lard, one teaspoon of salt, one teaspoon of ground cinnamon, one teaspoon of ground cloves, one cup of raisins.

Boil all these ingredients for five minutes after they begin bubbling. When cold add three cups flour, and two teaspoons of soda dissolved in one teaspoon of hot water. Bake in two loaves in slow oven an hour and a quarter.

HOUSEHOLD QUERIES

Using Old Bread—Cooking Beans

Like many other readers of this excellent paper I am coming to its pages for help. So many of its suggestions and recipes have been of such worth to me, and I know some one can give me the desired help now. My problem is how to use in different ways the ends and pieces of bread that will accumulate in my bread box. I wonder if our editor will not call for recipes along that line, also how to prepare beans (the dry ones) in different ways, especially how to bake the pink variety.—Mrs. E. S., Friant.

Let us hear from our subscribers. The Cultivator will give a three months extension of subscription for all suggestions published.

THREE LEGS OF A STOOL

Andrew Carnegie was once asked which he considered to be the most important factor in industry — labor, capital or brains? The canny Scot replied, with a merry twinkle in his eye, "Which is the most important leg on a three legged stool?"—Christian Register.

WORK AS WELL AS PRAY

Pray for what you want, but don't wear out the knees of yo' britches at it. Ef you don't get a quick answer rise up an go to work befo' you git too weak ter rise.—Atlanta Constitution.

FATAL MISTAKE

"How did you lose your last job?" "I was fired for making a mistake." "That seems unfair. We are all liable to make mistakes." "Yes, but I told the boss that he couldn't get along without me."

Now that the government wants the people to eat more fish it will be harder than ever to keep father from "taking a day off." We only hope that he won't neglect putting the wheat in to do so.

# Styleplus Clothes

\$17 and \$21

for men careful of their looks and purses

We developed the known-price idea in clothes. We concentrate our volume, lower our costs, give exceptional all-wool fabrics, style and tailoring at moderate price. The popularity of Styleplus Clothes throughout the nation has proved the soundness of our method. Even though Uncle Sam has already required 200,000,000 lbs. of wool for the soldiers, we are able to supply the American public with guaranteed all-wool stylish clothes at known moderate prices. Styleplus Clothes \$17 (black label) excel at that price. Styleplus Clothes \$21 (green label) excel at that price. Style plus all-wool fabrics+perfect fit+expert workmanship+guaranteed wear. Write us (Dept AB) for free copy of "The Styleplus Book."

## LIVE STOCK

Prices gross weight:  
Cattle: The following prices are for grass fed stock. Hay fed brings 1/2 to 3/4 c 10.

## Guaranteed Alfalfa Seed

There is probably less than one-third as much alfalfa seed on the Pacific Coast as there was last year at this time.

It seems as though alfalfa seed would be very scarce before next spring.

We field selected quite a large stock of the genuine old Common or Chilean alfalfa seed of highest quality, which we are selling under the GREEN GOLD BRAND.

The genuine old Common or Chilean alfalfa is by far the longest lived of any variety and produces as heavily as any. Its wide crowns do not let wild grasses get started readily.

More than half of our large stock of alfalfa seed is already sold. We advise our old customers and prospective customers to order now while the best seed is obtainable and while the price is yet low.

## Bomberger Seed Company

Box 986, Modesto, Cal.

## Insist on Having Jevne's Coffee

No matter whether you deal at the corner grocery or the big up-town store, all grocers will tell you—JEVNE'S COFFEE is best—it has stood the test of time.

Make the reading of advertisements in the California Cultivator a habit. They will broaden your knowledge of the manufacturing improvements.

RICE

California rice, new crop, cleaned, 100 pound head rice, 6.70; brewers', 5.25; screenings, 5.60.  
Rough rice, 100 lbs., 3.30 @ 3.50 to growers at shipping points.

HAY

Under date of November 10, Scott, Magner & Miller report:  
Receipts past week, 1960 tons, last week 1334. Most of the receipts have been on government requisitions for which the government has furnished cars. Therefore, the general receipts for the public at large have been extremely small. Recent figures compiled of the amounts of hay on hand tributary to the San Francisco market on the first day of November showed about 125,000 tons available as against 119,000 same date last season. Alfalfa is strong; straw, without interest.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling must be added according to conditions.

Fancy Wheat Hay, (light 5 wire bale) .....\$28.00 @ 29.00  
No. 1 Wheat or Wheat and Oat Hay .....24.00 @ 26.00  
No. 2 Wheat or Wheat and Oat Hay .....21.00 @ 23.00  
Choice Tame Oat Hay .....25.00 @ 27.00  
Other Tame Oat Hay .....22.00 @ 24.00  
Wild Oat Hay .....21.00 @ 24.00  
Barley Hay .....21.00 @ 24.00  
Alfalfa .....21.00 @ 25.00  
Stock Hay .....18.00 @ 20.00  
No. 1 Barley Straw .....60 @ 90

GRAIN

Grain Exchange prices, ctl.  
Wheat—Government prices: Common white hard, base price is \$3.50 per cental, or \$2.10 per bushel of 60 pounds delivered in terminal warehouses in bulk; soft wheat, base price 2 cents per bushel less, or \$2.08 per bushel; white club (including Sonora), \$2.06 per bushel. If wheat, after cleaning, weighs 60 pounds or more to bushel, base price stands; if 58 to 60 pounds to bushel, 3 cents per bushel reduction; if 56 to 58 pounds, 6 cents per bushel less; if less than 56 pounds, grain becomes sample grade and sells on its merits up to within 1 cent per bushel of 56-lb. wheat. Sacked wheat 4 cents per bushel more, less tare for weight of sacks.

Corn, California Yellow .....3.50 @ 3.75  
Australian .....3.75  
White Egyptian .....3.00 @ 3.10  
Barley, Feed, cwt. ....2.45 @ 2.47 1/2  
Oats, Red Seed, 2.90 @ 3.15; Feed, 2.55 @ 2.65  
New Black .....3.25 @ 3.50  
White .....2.82 1/2 @ 2.85

FEEDSTUFF

Wholesale prices per ton:  
Bran .....41.00 @ 42.00  
Cornmeal .....85.00 @ 87.00  
Cracked Corn .....85.00 @ 87.00  
Middlings .....50.00 @ 55.00  
Alfalfa Meal .....29.00 @ 31.00  
Cocoanut Meal .....40.00 @ 41.00  
Rolled Barley .....50.00 @ 51.00  
Shorts .....43.00 @ 44.00

SEEDS

Prices in round lots, lb.:  
Millet, re-cleaned .....4 1/2 @ 5  
Alfalfa .....20 @ 21  
Flax .....6 @ 6 1/2  
Rape .....2 1/2 @ 3

Citrus Fruit Market

Los Angeles, Nov. 14, 1917.  
Oranges have sagged slightly. Better grade fruit holding its own. There are still nearly a thousand cars of Valencias to ship. There will be practically no shipment of Thanksgiving navels. The lemon market is holding firm.

Shipments  
Shipments from Southern California since November 1, 1917; oranges 823, lemons 119, total 942. Last season to same date oranges 227, lemons, 242, total 469. From Central California, since November 1, 1917: oranges 2, lemons 5, last year to same date oranges 32, lemons 41, total 73. Northern California no shipments this year, total to this date last year, oranges 7.

AT THE AUCTIONS

November 7  
New York: 16 cars. Val. \$1.90-\$7.00.  
Boston: 6 cars. Val. \$2.15-\$4.05.  
Philadelphia: 4 Val. 1 Lem. Val. \$2.60-\$3.90; Lem. \$3.70-\$6.40.  
St. Louis: 4 cars. Val. \$2.35-\$4.70, Lem. \$4.00-\$5.00.  
November 9  
New York: 17 cars. Val. \$1.60-\$7.65.  
St. Louis: 2 Val. 1 Lem. Val. \$3.30-\$4.00, Lem. \$4.20-\$4.70.  
Philadelphia: 5 cars. Val. \$2.40-\$5.80.  
November 12  
New York: 21 Val. 2 Lem. Val. \$1.50-\$7.60.  
Pittsburg: 8 cars. Val. \$2.95-\$4.10, Lem. \$6.25-\$7.15.  
St. Louis: 3 Val. 1 Lem. Val. \$3.25-\$4.15, Lem. \$4.20-\$4.95.  
Boston: 7 Val. 2 Lem. Val. \$2.80-\$5.10, Lem. \$4.60-\$7.00.  
November 13  
New York: 19 Val. 2 Lem. Val. \$1.60-\$7.20.

Philadelphia: 6 cars. Val. \$1.90-\$3.70.  
Boston: 6 Val. 1 Lem. Val. \$2.50-\$4.95, Lem. \$4.30-\$5.65.

MARKET NOTES

Recent sale of Porto Rico oranges in New York average \$2.35 per box.  
Any apples that were not harvested at the time of an early November wind at North Yakima, Washington were blown from trees and lowered in grade.  
Australian butter recently received at San Francisco and reshipped to many Pacific Coast points. There were 192,100 pounds in the shipment.  
The dry bean market is still unsettled, no trading other than immediate needs demand.  
The shipment of wheat received from Australia at San Francisco recently aggregated 114,000 centals. It will be marketed under control of The Grain Corporation.  
Flour was recently advanced 20 cents per barrel.  
The effort to hammer down the price of eggs in Los Angeles through investigations of the grand jury has weakened the market slightly but no material decline is yet noted.  
Scarcity of cars is one reason given for the extremely high prices of hay. Rather a greater quantity of hay is in holdings on the farms and interior warehouses than last year same date. Practically every offering of higher grade hay is picked up by war department agents.

NOVEMBER CROP REPORT

Corn  
California: Production this year, 2,240,000 bushels; last year (December estimate), 2,048,000 bushels.  
United States: This year, 3,190,000,000 bushels; last year (December estimate), 2,583,241,000 bushels.

Wheat  
California: This year, 6,534,000 bushels; last year (December estimate), 5,600,000 bushels.  
United States: This year, 659,797,000 bushels; last year (December estimate), 639,886,000 bushels.

Oats  
California: This year, 6,650,000 bushels; last year (December estimate), 6,500,000 bushels.  
United States: This year, 1,580,714,000 bushels; last year (December estimate), 1,251,992,000 bushels.

Barley  
California: This year, 35,206,000 bushels; last year (December estimate), 33,320,000 bushels.  
United States: This year, 201,659,000 bushels; last year (December estimate), 180,927,000 bushels.

Rice  
California: October 1 forecast, 5,125,000 bushels; production last year (December estimate), 3,263,000 bushels.  
United States: October 1 forecast, 33,256,000 bushels; production last year (December estimate), 40,702,000 bushels.

Potatoes  
California: This year, 15,100,000 bushels; last year (December estimate), 10,575,000 bushels.  
United States: This year, 440,000,000 bushels; last year (December estimate), 285,437,000 bushels.

Sweet Potatoes  
California: This year, 1,000,000 bushels; last year (December estimate), 960,000 bushels.  
United States: This year, 84,700,000 bushels; last year (December estimate), 70,955,000 bushels.

All Hay  
California: This year, 4,627,000 tons; last year (December estimate), 4,615,000 tons.  
United States: This year, 91,715,000 tons; last year (December estimate), 109,786,000 tons.

Apples (Agricultural Crop)  
California: This year, 1,890,000 barrels

of 3 bushels; last year (December estimate), 1,918,000 barrels.

United States: This year, 59,200,000 barrels of 3 bushels; last year (December estimate), 67,415,000 barrels.

Peaches  
California: This year, 10,192,000 bushels; last year (December estimate), 8,808,000 bushels.  
United States: This year, 42,606,000 bushels; production last year (December estimate), 36,939,000 bushels.

Cotton  
California: September 25 forecast, 50,000 bales; production last year (Census), 43,620 bales.  
United States: September 25 forecast, 12,047,000 bales; production last year (Census), 11,449,930 bales.

Sugar Beets  
California: November 1 forecast, 1,660,000 tons; last year (December estimate), 1,463,000 tons.

## A Great Farm Tool —the Maxwell Truck

Mechanical devices to take the place of human hands and muscles—these are vital necessities on the farm today.

The farmer is a manufacturer—a manufacturer of food products.

American farmers, too, are business men, applying efficiency methods.

The world is crying for the products of our fields.

The yield **MUST** be multiplied.

And human labor is becoming more than ever difficult to get.

The efficient, economical, durable Maxwell one-ton truck is doing a splendid part in meeting this emergency.

It is bringing goods from the field—from the barns—from the granaries—to market at a speed our fathers, with their slow horse-drawn wagons, never dreamed of.

A Maxwell truck covers, in one day,

twice the mileage of **TWO TEAMS** with their two drivers—and does it at the cost of one team.

A Maxwell truck saves **TIME—LABOR—MONEY.**

It increases the yield of a farm—and increases, too, the **NET PROFITS** of that farm.

And it is sold at a price that can't be touched by any other motor truck of anything like its mechanical efficiency and economy of operation.

The specifications and measurements of the Maxwell truck equal or surpass any truck sold for \$1,500.

Be sure to inform yourself about the construction of this great vehicle before buying any truck.

No progressive farmer-business man can **AFFORD** to be without a Maxwell truck today.

*Maxwell one-ton chassis \$865; Chassis with cab and windshield \$900  
Chassis with cab, windshield, and stake gate body \$950  
All prices f. o. b. factory*

## The Bandit of the Brush

Wm. M. Bristol Tells of the Depredations of Coyotes and How He Made the Varmints Pay Their Own Way

He is long and lank and lean,  
And there's slyness in the mien  
Of the scamp;  
His garb of gray and yellow  
Suits the gay and hungry fellow—  
Royal tramp."

THESE rhythmic lines constitute the opening stanza of a California writer's description of the coyote, whom he pictures as "The King of the Tramps." I think, however, that altitudes of people who have tried to raise poultry in California without protecting fences will agree with me that "Bandit of the Brush" is a better moniker.

My actual acquaintance with the coyote began nearly 30 years ago when I settled upon a tract of virgin land on the picturesque East Highlands mesa in San Bernardino County at the foot of a peak now known as Mount Harrison. My bachelor-hall stood just where the sagebrush and the chaparral met and, as I very soon learned, I had settled in coyote land.

Like every tenderfoot in the California southland I had poultry-raising notions. I had come to the southwest to live the outdoor life, and I was determined to try all the experiments I could to have all the experiences that I could with it. I knew that poultry would thrive here and I knew that Egyptian corn with which to feed them would grow even without irrigation. Apparently I would have an income as soon as I could grow a crop and raise stock to eat it, and, it being then the first of January, I purchased a dozen hens and began clearing my land for the corn.

I have often meditated upon the fact that any certain piece of land which any certain man calls his home is also considered home by a myriad of other creatures, and the man pre-eminently only because of his superior intelligence and might. In clearing my land I was simply removing the brush from a portion of that primeval domain where the fauna of the region ranged from time immemorial, from which the larger animals had now disappeared. The predatory species that remained were represented chiefly by the coyote, the fox, the wildcat, and my clearing (which is not a pun) was simply a springhouse for their trails.

The mention of trails prompts me to say that wild animals like trails as well as a modern motorist likes paved highways. If any beast of the brush comes upon a trail leading even approximately in the direction he is traveling he will take it in preference to going through unbroken brush. Knowledge of this fact was helpful to me in the relentless campaign that I waged for two years upon those prior citizens that disputed my rights as a hunter. Knowing that they liked trails I approved the existing ones and then made new ones. Every canyon and gulch leading to or from my lofty domain—which a friend dubbed Wayupch—which I provided with an attractive trail. Along each trail I set sturdy traps like unto the dead trees to which the bandits of the brush were

### PRESIDENT'S THANKSGIVING PROCLAMATION

"It has long been the honored custom of our people to turn in the fruitful autumn of the year in praise and thanksgiving to Almighty God for His many blessings and mercies to us as a nation. That custom we can follow now even in the midst of the tragedy of a world shaken by war and immeasurable disaster in the midst of sorrow and great peril, because even amidst the darkness that has gathered about us we can see the great blessings God has bestowed upon us, blessings that are better than mere peace of mind and prosperity of enterprise.

"We have been given the opportunity to serve mankind as we once served ourselves in the great day of our Declaration of Independence by taking up arms against a tyranny that threatened to master and debase men everywhere, and joining with other free peoples in demanding for all the nations of the world what we then demanded and obtained for ourselves. In this day of the revelation of our duty not only to defend our own rights as a nation, but to defend also the right of free men throughout the world, there has been vouchsafed us in full and inspiring measure the resolution and spirit of united action. We have been brought to one mind and purpose. A new vigor of common counsel and common action has been revealed in us. We should especially thank God that in such circumstances, in the midst of the greatest enterprise the spirits of men have entered upon, we have, if we but observe a reasonable and practicable economy, abundance with which to supply the needs of those associated with us as well as our own. A new light shines about us. The great duties of the day awaken a new and greater national spirit in us. We shall never again be divided or wonder what stuff we are made of.

"And while we render thanks for these things let us pray Almighty God that in all humbleness of spirit we may look always to Him for guidance; that we may be kept constant in the spirit and purpose of service; that by His grace our minds may be directed and our hands strengthened, and that in His good time liberty and security and peace and the comradeship of a common justice may be vouchsafed through all the nations of the earth."

accustomed, and to each post I attached a double spring steel trap. To the wild animal folklore of the region I added all the logic I could develop from current experience, with the result that in two years I captured nearly 75 of the three varieties mentioned, coyotes, foxes and wildcats.

I have mentioned the marauders, not only in the order of their abundance but also in the order of their cunning. It certainly was not the California fox that gave the fox family the reputation it has for shrewdness, for, as compared with the coyote, he is an infant in arms. On making the first round of my traps I found in one the hind leg of a fox, and three weeks later I found the remainder of him in the same trap. I had caught 19 foxes before a single coyote fell a victim. I was beginning to think I was not shrewd enough for the gay howler

The Bandit of the Brush

of the hills, but the spell was broken at last and, the foxes being out of the way, I made havoc in his ranks, catching nearly fifty in the two years in question.

For the benefit of those who may wish to go after the raiders I will state the method, the details being simple but imperative. The trails with the posts beside them, being provided, the trap is set, buried as nearly as possible directly in front of the post and about eight inches from it. It is important to set the trap with

the springs pointing to and from the post. The bait, preferably beef, should be securely wired to the post about two feet from the ground, and brush should be arranged behind and at the sides of the post so that the animal will be almost compelled to approach the bait from the trap side. If the trap is set as described and the animal approaches from the front, the jaws of the trap will strike his foot on the sides and will hold him. If the trap is set paralleling the post instead of pointing toward it the forward jaw will sometimes knock the animal's foot into the air before the other jaw can catch it. I never had ocular proof of this, but believe, from my experience that it is correct. It is also important to cover the trap lightly with grass or leaves and to extend this covering for some distance along the trail. Foxes and wildcats will walk into anything, but the art of catching the coyote hinges upon throwing him off his guard. This is best done by cutting some of the bait into bits the size of a walnut and dropping them at intervals along the trail in either direction from the trap. He comes upon these bits before he has seen anything suspicious, and, stopping to pick them up successively, his appetite is whetted until, reaching the main bait at the post he throws caution to the winds—and the trick is done. I do not consider it necessary to avoid touching either the trap or the bait with the hands.

### Tanning Skins

It goes without saying that if one wishes to preserve the furs of these animals they should be caught in the fall or winter when their coats are new and handsome. There are various methods of tanning the hide. The process is not difficult, although some care and patience is required. The method I used—the only one with which I am familiar—is to apply a

mixture of alum, saltpetre and salt, equal parts, to the inside of the fresh hide, spreading it perhaps an eighth of an inch deep. The hide is then folded so that these treated surfaces face and come in contact with each other. It is then rolled up tightly in paper and laid away for a week, after which it is taken out and drawn back and forth over the edge of a board until it is dry and soft. If this part of the task outlasts the patience, and there is no old Indian woman available to complete it, the hide must be again rolled up in paper until another attack of industry comes upon the tanner.

### WAR SAVINGS

The war savings plan provided for in the last bond act of September 24, 1917, has been formulated and announced by the treasury department and goes into operation on Monday, December 3.

The plan puts it easily in reach of every American citizen to save money and at the same time aid the government by supplying it with the sinews of war.

Stamps, which are the government's certificates of indebtedness, are to be sold in two denominations — thrift stamps, which cost 25 cents each, and war savings stamps, which cost from \$4.12 to \$4.23 each according to the month in which they are purchased.

With the first thrift stamp the purchaser is given a thrift card with spaces for 16 stamps. When 16 thrift stamps have been purchased and affixed the thrift card can be exchanged for a war savings stamp by paying the difference between the \$4.00 the thrift stamps represent and the current value of a war savings stamp, which in December, 1917, and January, 1918, will be \$4.12, and thereafter one cent for each succeeding month during the year 1918.

With the first war savings stamp obtained by purchase or exchange the owner is given a war savings certificate containing spaces for 20 war savings stamps. If the 20 spaces are filled during December, 1917, or January, 1918, the cost to the purchaser will be \$4.12 for each stamp, or \$82.40 for the full certificate, and on the 1st day of January, 1923, the government will redeem the certificate at \$100, giving the holder a net profit of \$17.60 for the use of his money.

Although these investments do not mature until January 1, 1923, provision is made whereby upon 10 days' written notice after January 1, 1918, such certificates will be redeemed by postmasters at their cost to the purchasers plus one cent a month on each war savings stamp on the certificate.

The thrift stamps do not bear interest, but the war savings stamps bear four per cent, compounded quarterly. The certificates will be dated January 2, 1918, and mature January 1, 1923.

Under the plan an amount as small as 25 cents can be invested in a government security, and as soon as \$4.00 has been thus invested an interest bearing certificate of the United States government can be secured.

The stamps and certificates can be obtained from post offices, banks, or trust companies, at most railroad stations, stores, factories, and many other public places.

Having the entire wealth of the United States back of them, and being redeemable as above stated, there is no danger of any depreciation in value of the certificates.

## (BLASTING) Made my trees grow twice as fast

Three-year cherry trees, same size when planted, in orchard of Herman H. Smidt, R3, Oregon City, Ore. That at left in soil blasted with Eureka Stumping Powder; that at right in dug hole. Illustrations reproduced from photographs taken February 14, 1916.

"The trees that I planted in blasted ground show a growth of 75 to 100 per cent. over the trees that were planted in ground not blasted," says Mr. Smidt. "They also appear healthier and more satisfactory in every way. I have just bought 1,100 more prune trees and would not think of planting them without preparing the ground with

### GIANT FARM POWDERS STUMPING — AGRICULTURAL

Hundreds of fruit growers have found, like Mr. Smidt, that the Giant Farm Powders—Eureka Stumping or Giant Stumping—are the proper explosives to use in tree planting. They pulverize the soil for several feet in every direction, instead of caking and packing or throwing it high in the air.

Be sure your dealer supplies you with the genuine Giant Powders and blasting supplies, made especially for Pacific Coast conditions. If you do not know where to get them, we will see that you are supplied.

## Orange Standardization

By G. H. Hecke

IN THE passage of the fresh fruit standardization law the legislature of 1917 performed a service for the citrus growers of California that, judging from a series of meetings just completed, is greatly appreciated and one that will be of inestimable value to the industry through the prevention of the sale of immature oranges. No oranges, under this law, can be offered for sale or shipment unless they contain eight parts of soluble solids to one part of acid or unless they are substantially colored before being picked from the trees.

The enforcement of this law was placed in the hands of the county horticultural commissioners who are designated as inspectors of fresh fruits. The state horticultural commissioner and his chief deputy are named ex-officio inspectors in chief of fresh fruits, and as such their duties are

of ripeness fit for shipment. Deputy State Horticultural Commissioner George P. Weldon, conducted the meetings as the standardization work of the state horticultural commission has been placed in his charge.

Based upon the definition of substantial which is given in the standard dictionary as follows: "In a substantial manner; as really, actually, solidly, in substance, essentially, materially," and considering the desire of the citrus growers to stop forever the sale of green oranges, substantially colored was defined as "practically fully colored." That is, an orange is considered to be substantially colored when the entire surface is yellow and there is a total absence of green except the navel or the stem end, which frequently show more or less green color long after the rest of the surface is yellow and the orange thoroughly mature. In order that everyone may be

Citrus Orchards of Tulare County  
View from the foothills looking toward Lindsay.

outlined as follows: "Where there is a dispute or difference between the inspectors of fresh fruits of two or more counties, or where the interpretation standards between two or more counties differ materially, have the power and authority to settle the dispute between the inspectors of fresh fruit of such counties and to fix reasonable standards between such counties where they materially differ."

In order that uniformity in the enforcement of this law might be secured and that it might not become necessary for the ex-officio inspectors in chief of fresh fruit to be called upon to settle differences after the packing season has begun, a series of meetings were planned for Tulare, Fresno, Sacramento and Butte Counties.

These particular counties were chosen because in them conditions are such that all growers cannot comply with the eight to one standard, that is to say, in certain sections fruit is fully colored and fit for shipment before it meets the eight to one test. Such sections, therefore, must rely upon substantial coloring to designate a degree

ter understand what is meant by the definition of substantial coloring, the exact color, as nearly as is possible, a substantially colored orange will be reproduced by color photography, and pictures will be furnished to all county horticultural commissioners and inspectors, packers, growers, and others who may request them.

A desire on the part of the citrus growers and packers to cooperate in the enforcement of the law as it pertains to substantial coloring was expressed in meetings held at Porterville and Lindsay on November 7 and Oroville on November 8.

The state commissioner of horticulture wishes to express his appreciation of the fair-minded way in which the citrus growers have treated this very important matter. In place of themselves on record as favoring strict enforcement of the law as it relates to substantially colored oranges they have done much toward strengthening the position of the inspectors of fresh fruits, who will do all in their power to make the law serve the purpose that was intended by its framers.

## Nitrate of Soda

Congress has authorized the department of agriculture to secure fertilizers for crop production in the United States and has appropriated \$10,000,000 which the department, under direction of the president, may expend. The most definite step yet taken has been formulation of a plan for the purchase of a great quantity of Chilean nitrate. Notwithstanding prices of Chilean nitrate have increased very greatly within the past few years this purchase has been made in order that it may be turned over to

producers of the entire country at the least possible cost. The demand in this country for Chilean nitrate will be smaller than heretofore and the munitions manufacturers require enough nitrate in hand for all their needs for at least another 12 months and contracts made for all their needs for years to come so that there will be no competitive bidding in the nitrate market.

Of course \$52 to \$58, which prevailed a few years ago, are prices of the past and it is probable prices will run around \$100.

## High Priced Olive Oil

It has been reported that exportation of olive oil has been forbidden by Spain. This, with demand for this oil from American consumers being greater than ever assures exceptionally high prices for all the present season's output. Of vital interest to the olive grower is the fact that in

Italy thousands of olive trees are being cut down to supply needed fuel. Another factor which is of possibly more interest is that many thousands of gallons of olive oil which have been shipped from Italy will never arrive at their destination, for they are at the bottom of the Atlantic. All the

FUR PRICE LIST FREE

conditions have doubtless caused the refusal of some of the larger houses to receive orders for the coming season's output at any price.

Olive growers are appealing to the state university for help in experimental and investigational work; also for the university extension type of work which will give information to olive producers. This state has invested many thousands of dollars in investigating best methods of producing wines. The olive industry is not yet so important, but certainly is worthy of encouragement.

### Vicious Contract

**U**NDER the head, "A Vicious Raisin Contract" Wylie M. Giffen of the Associated refers to a contract offered by a private concern to growers outside of the association. The contract covers a term of years, as many as the grower will sign for. It stipulates that the price for the season's delivery shall be 2½ cents per pound less than the carton price of the packer making the purchase. Mr. Giffen says:

"From the packer's standpoint this contract is a cinch, but from the growers' point of view it is perfectly senseless. When the packer loans you money and lets you fix the rate of interest; when your merchant sells you goods and lets you name the price, then, and not before, should you sign a contract allowing an independent packer to set the price on your raisins."

"Following the terms of this proposed contract the packer could make his opening price four cents per pound, deduct 2½ cents per pound, leaving the grower for his year's toil 1½ cents per pound, and this would be no violation of the contract. Out of this \$57.50 per ton on the ten or fifteen thousand tons of raisins that it is their ambition to buy, they would make a net yearly profit of from \$150,000 to \$200,000; and if their greed demanded more they could make it a million dollars per year by the simple process of making the opening price extremely low, selling a few thousand tons of raisins, then advancing the price as much as possible, and sell the balance of their purchases against the latter price; but the silver-tongued salesman, representing this honorable concern, assures the growers that the opening prices will be based upon the opening prices of the Associated Raisin Company, but that is not written in the agreement—it is only conversation—and would not even bind the present management of the concern, much less some one who might be in charge a year or two hence."

"The only alluring thing about their contract, and the one which, undoubtedly, attracts the growers' attention, is the fact that within two days after the completion of the delivery they will pay 'all the cash;' but again let us remind you that 'all the cash' in the good old days when this independent packer reigned supreme in the Thompson Seedless business was less than the guaranteed minimum price of the Associated Raisin Company. Surely \$50 or \$60 per ton above this guaranteed minimum is not to be sneered at, even if it comes one year later."

"The writer has watched the raisin business with more than passing interest for 30 years; he has seen it go from a high cash price to a commission basis, when many of the growers got red ink the same as some of us do on green fruit today, and as a result good bearing vineyards could be bought for \$50 per acre; he has seen the struggle of the old cooperative packing concern to restore the business to its former glory; he has watched the struggle of the old association as it endeavored with varying degrees of success to again establish the business on a firm footing; he will remember the contracts that netted the growers less than nothing; the pools, because of whose failure he sold raisins for two cents per pound that had cost him three cents per pound to grow; he has sold thousands of tons of raisins to the various packing concerns, and signed contracts that were as lopsided as a two-wheeled buggy, but through all of the vicissitudes of these 30 years he has never seen a contract so vicious, so damnable as the one now being offered to the growers of Thompson Seedless raisins."

## Note What It Does

IN ORCHARDS IN VINEYARDS

## This 15-Feature Tractor Will Almost Run Your Place

**15 FEATURES** — invaluable in orchards and vineyards — make this the needed tractor.

No other tractor of the track-laying type sells at so low a price. And no other has such advantages as the patented front drive.

### Handles Like Horses

The Bean TrackPULL Tractor turns clear around inside a 10-foot circle (5-foot radius), and it has full power even on so short a turn. It plows and harrows close up in the corners, and right up to the trunks and vines. It goes under tree-branches only four feet off the ground; and works between 7-foot rows in vineyards. On account of the patent principle and simple transmission, the fuel consumed is far less than other types doing the same amount of work. When you hit soft spots or holes, you simply swing the track over and pull out as you do with teams.

When not in the field this trac-

tor's 10 h. p. pulley runs your stationary machines.

### A Great Patent

The Bean TrackPULL is different from all other tractors in that it pulls instead of pushes itself along; and you steer with this track that pulls. That is why the Bean can be "gee-ed" and "haw-ed" like a team. This feature is patented so no other tractor can provide this big advantage. Sooner or later you'll decide, without doubt, that you want a tractor to do these things.

### Know First—Then Decide

So don't buy a tractor until you know all the facts about this remarkable agricultural aid.

The Bean TrackPULL Tractor pays for itself in what it saves for its users. It weighs less (3100 lbs.) and costs less to operate than wheel-type machines of equal power. And yet it has greater traction. The pressure per square inch on the soil is less than a man's foot.

Before you turn this page send for full information about the Bean TrackPULL Tractor.

## BEAN TrackPULL Tractor

# Pistache Experiments

Written for California Cultivator By Claud D. Trebble

**S**OME eleven years ago we were furnished stocks of the pistache in several varieties with the assurance that bud wood of the Pistache Vera would be furnished soon. The stocks, some 600 of them, thrived and made fine trees. The loss in transplanting was about 20 per cent. Varieties of stocks were P. Atlantica, P. mutica, P. terebinthus, P. Lenticus, P. Chinensis and Veristina hybrids. The P. terebinthus was planted on our very best soil and given best care and has proven very slow growing and of dwarfish habit. The transplanting loss of this variety was very heavy. P. Chinensis has proven a rapid grower till grafted or budded, then the grafts outgrow the stock several times and will probably break off on account of weight.

The P. Lenticus, mutica and Veristina are fair stocks but very difficult to make the buds and grafts stick after they grow as they seem to lack affinity for the P. Vera. The male species of the Mutica and Veristina are valuable on account of blooming with the Large Red Aleppo and Trabonella varieties of the P. Vera.

The P. Atlantica is by far the best stock from every point. It is a rapid spreading grower, very light loss in transplanting, takes the buds so readily that buds inserted in the trunk of trees several years old will often grow from one to three feet in length without cutting back the tree. Grafts are easily grown and with ordinary methods an experienced grafter can make 75 per cent stand. Grafts rarely ever blow out.

Five years ago we were furnished with buds and grafts of the Kog or Walnut, Large Red Aleppo, Trabonella and the so-called Carpellate varieties of the pistache. The Kog or Walnut variety came to us with the reputation of being one of the finest varieties of this nut and proved to be a male variety, the pistache being a dioecious tree, the male and female flowers occurring on separate trees. The Carpellate variety proved to be a very small variety, no larger than the nuts of the varieties used for stocks, and is worthless, although the kernel is a rich green and of fine flavor. The Large Red Aleppo is the largest of the varieties we have and is a splendid variety but does not crack open so readily as the Trabonella, although the nuts of individual trees crack more than on others of both these varieties. Best trees average about 75 per cent cracked nuts. For the confectioner and pastryman the Trabonella seems to be the best as it has a deep rich green kernel and a very rich flavor.

On many trees of this variety 99 per cent of the nuts are cracked, and the kernel is much larger than the shell. We are informed that it is necessary the shells should crack so the kernels will absorb the process of salting necessary for eating out of the hand. This variety comes to heavy bearing before the Large Red Aleppo and ripens at least two weeks earlier.

Pistache nuts are easily gathered and should be shaken on sheets and the husks can be rubbed off either after drying or fresh. It would seem that it would be easy to husk these nuts by some mechanical means. After husking the nuts dry readily on trays in partial shade or in the sun. The husks seem to have considerable oil in them and when they may be had in considerable quantities an oil or gum mastic may be economically made from these.

Infertile nuts hang in the clusters of good nuts till gathered but are readily told from the good nuts by the husk being dried on them and cannot be rubbed off.

Our experience may be summed up in the following: Use the Atlantica for stocks, bud in the nursery row at two or three years old or plant in orchard form and graft or bud at three or four years old. Use buds of the best Large Red Aleppo and Trabonella varieties from trees proving the largest per cent of open uts, and use the Kog and Mutica males and plant a male tree every seven trees square, or in other words plant the first row beginning with the first tree a male and plant six female. In the next six rows plant solid to female trees, then begin

as in first row. The trees bloom later than the walnut and almond as the first flowers appear about the first of May and the nuts are ready to gather from September 15 to October 1. We have much faith in this new nut and believe it will add much to the wealth of California.

## 50th State Fruit Growers

**A** CONVENTION of great importance is in session this week in Sacramento. The fruit growers of the state are gathered to discuss old problems, always unsettled; also labor and other problems which are entailed by war conditions.

In his annual address Commissioner Hecke said:

"Beginning with its early history as a horticultural state, California, through her devotion to progressive ideas, has developed a system of efficient plant protection. From the pioneer days on her people have been eager to search out methods calculated to promote their various rural interests. As we look back over the records of the 49 conventions and realize the wide range of activities and note the constant and steady increase of duties of those in charge, commencing with the first convention held December 6, 1881, in this same state capitol where we are now holding the 50th convention, we experience a warm feeling of appreciation of the efforts of our pioneer predecessors.

"The first meeting, more than a generation ago, was called to order by Matthew Cooke, the first chief executive horticultural officer and the pioneer entomologist of the state, for the purpose of assembling the fruit growers and representatives of the various industries associated with horticulture. They had for their object a bet-

ter understanding of what would be expected and required of their respective interests in the making and enforcement of beneficial laws for the protection of horticulture.

"The principle for which Matthew Cooke and his disciples contended is contained in the quotation, 'So use your own as not to injure others.' Their interpretation of this was to the effect that there should be no neglect of any known economical methods for preventing the spread of injurious insects and plant diseases from personal property to that of others. . . .

"In addition to the regular duties of the state commission of horticulture, every member of the commission has felt it his and her duty to assist the state and nation at this critical period of national need. In cooperation with the University of California and the state council of defense we have taken an active part in the food producing and food preservation campaign; we have urged more planting and better cultivation, advised the best methods of pest control and started our vigorous campaign against rodents and weeds, to the end that our people may be enabled to better provide for themselves and all those engaged with us in this fight for the world's democracy."

Many a patriotic farmer is wondering how under the sun he can "speed up production" as he must in order to comply with our country's demands and the obvious, crying needs of Europe with its hunger stricken millions. This demonstration is going to show such a man that the tractor is the solution. In the present national crisis the tractor is a necessity for the required rapid mobilization of the agricultural and industrial resources of the United States.

A liberty bond in your bank vault means security for you and your country.

Put the scrub bull into bologna. In your herd he's an ally of the kaiser.

## TEAGUE QUALITY CITRUS TREES

AWARDED THE GOLD MEDAL AT FOUR INTERNATIONAL EXPOSITIONS.

For Productive values, fine quality of fruit and vigorous growth Teague's bud-selected, (pedigreed) properly trained and carefully handled orange and lemon, pomelo and lime trees are the trees to plant. An experience covering a third of a century warrants the assertion that Teague Quality Citrus Trees possess these qualifications in a superlative degree. All the standard commercial sorts, and garden and ornamental varieties; the largest assortment of citrus trees in America. . . . We invite correspondence from intending planters. . . . Consultations on citrus planting by appointment. 1918 Price list just out; send for a copy.

# What is a Garden?

Written for California Cultivator. By Ernest Branton.

GARDEN in city, suburbs or country cannot be left wholly as a piece of wild and untamed nature. Such a course would be as inconsistent as to dig a rough cave for the occupation of the family. A garden is a piece of land subdued by man to his own uses and purposes and to pretend that he is not doing so is to prove him a snob, for all such pretense is mere affectation. On the other hand he should not overwhelm all the beauties and attractions of nature by his arrogancy in wishing to dominate the landscape with his own crude handiwork. The beautiful in nature should be preserved to the fullest.

Some garden builders are quite intolerant of natural effects and if trees and shrubs are found on the land they are pruned till all semblance of natural beauty is gone, if indeed the poor things are allowed to remain at all. But why dilate on the weakness, shortcomings or vandalism of man. There is a brighter and happier aspect and attitude; that of doing the best we may with what is at hand. Leave all the natural beauty possible. Prune trees and shrubs only for their own good, not to bring to your preconceived notions of what should constitute bush and tree. Do not change topography, unless almost or quite unavoidable. If you have a little hill, make it appear by skillful planting, if a ravine or canyon make it deeper and more glen-like by leaving the bottom inviolate and planting the sides clear to the top.

The garden builder should aim at beauty yet should make the garden useful. It must be subdued to the purposes of human kind, and keep in mind all the time the object in view, of making the useful beautiful and the beautiful useful. But beauty will not be attained unless the builder aims at beauty; it will not come by chance. Aim to display all to the best advantage, but do not keep in mind beauty of individuals as such, but only as one of many that will be beautiful collectively. And if they are to remain beautiful or grow in beauty they must be so provided for in soil and conditions that beauty shall be perpetuated. In short, a garden should be so designed and planted as to give pleasure to both owner and visitor, not as a museum of plants, but as a place where joy and comfort go hand in hand to a part of the land that is set apart for your very own.

## Curious Plants

When a child I used to marvel at several things in plant life that seemed oddly out of place. One was that peanuts grew underground. The impression of nuts growing on trees, as nearly all do, or of the hazel bush with its burs full of nuts could hardly allow nuts under the soil. Nor was I any more satisfied when told they were not closely related to any other nuts, but were true pods with beans or peas inside, for no beans or peas are known that do not grow on bush or vine.

Before being able to easily tell the difference between wool and cotton I had seen tens of thousands of sheep and gained the impression that cotton also must be shorn from some hairy animal not far from cat or dog in appearance. Therefore I was astounded at the sight of a cotton plant at maturity, covered with balls of white cotton that I was assured was real cotton. After handling the substance my mind at once turned to the downy softness of cotton flannel. One more puzzle there was—the sweet potato. I was very familiar with the common potato, as I was with morning glory vines and flowers, but saw no sweet potato plants until quite a large boy. Then I was quite astonished to find that sweet potatoes were the roots of morning glory plants. All the three things mentioned have never become quite adjusted yet. I am wondering if we do not owe it to our children to acquaint them with these facts and grow plants of each of these things in our own garden that the little ones may see and learn. All the plants in question are natives of the Americas.

## St. John's Bread

In these days of high cost of stock

food more consideration should be given Ceratonia siliqua, the carob or St. John's Bread, a tree of splendid appearance and wide use as an ornamental and of still greater value as a bearer of food for live stock. It is an evergreen with handsome foliage, of good habit, requiring little or no pruning to keep in good form and will thrive in any soil with a minimum supply of water, but will not endure very heavy frosts, being occasionally damaged in Southern California. In some countries horses, cattle, sheep, and hogs are fed almost exclusively on the pods of these trees, and mutton and pork from animals so fed are said to be of superior flavor.

## The Composition of Plants

Is it not strange that the greatest per cent of ash is found in leaves and the smallest per cent in the wood of

trees? Yet such is the case; leaves contain from 10 to 25 per cent of incombustible or non-combustible material while dry straw contains from four to eight per cent. Of combustible material or dry matter of plants about one-half is carbon. The other elements are oxygen, hydrogen, nitrogen, sulphur, and a little phosphorus, and these make up every plant that grows. The incombustible ash also always contains six elements, potassium, magnesium, calcium, iron, phosphorus, and sulphur. In general ash also contains several other elements, often in minute quantities.

## Water Most Essential

All know that mankind perishes for lack of water and not for lack of food when cut off from all supplies of food and drink. The same conditions prevail with plant life, and the same per cent of water will be found in each, except that plants vary in this respect far more than animal life. Many succulent vegetables contain more than 90 per cent of water, and the driest living timber, when felled, has been

found to contain 40 or more per cent of water. Water then, being most essential to life of all elements should be most freely and constantly supplied to both animal and vegetable life, for even old hay contains at least 15 per cent of water. It is the one life-giving element; the others are life-sustaining when combined with water.

## Native Horse Chestnut

It is a curious fact that a majority of our people do not know our native horse chestnut, though when in bloom it is a beautiful tree, with extremely showy spikes or thyrses of flowers that strongly resemble a well-grown white hyacinth. The tree is deciduous and in many places but a large shrub, but in good soil it will grow to 50 feet in height and two feet in trunk diameter. The wood is light, soft, and porous and has been found useful for many purposes. In early days of local settlement the ox yokes were made from these trees.

American apples are being exported to Australia.

This is an actual photograph taken from life of the new Selma Cling Peach.

# THE SELMA CLING PEACH

The new mid season yellow Cling Peach—ripens just after Tuscan—keeps labor employed—ask the manager of your cannery about the advantages of having a peach ripen at that time—fruit of excellent flavor—fine grained—yellow to the pit, which is small.

Not an experiment—has been thoroughly tested and observed by us for several years—stock is limited. Write for prices and full information—satisfy yourself and get the early profits from an orchard of this profitable California variety.

# Gower Nectarine

Earliest of the Nectarines—ripens with early Crawford peach. No fruit of this class has met with such favor as has this new early Nectarine. Ships like a clingstone peach, although a freestone. Free, strong grower—bears very heavily. A limited number of trees for customers ordering early.

More Nectarines should be planted. The demand for the fruit is rapidly increasing. Grows wherever the peach grows. Investigate profits by consulting the Nectarine growers, and if you are not already informed, you will be much pleased to learn of the profits that are being made. Mr. Frank Viator writes, "I have on my ranch 300 Nectarine trees twelve years old—this year my crop off these trees sold for \$2,250.00."

## ALMOST WEAR PROOF DISK HARROW BEARINGS

The loose, gritty, sandy soil of these Western States is hard on implement bearings, especially on ordinary disk harrow bearings which work close to the ground in a cloud of gritty dust that fairly eats them up. In Deering and McCormick bumper disk harrows, the bearings are built to last and give good service even under these extreme conditions. If sand and grit does get into these bearings, most of it will drop through before reaching the boxing itself.

The grit and dirt that does reach the boxing, instead of cutting it all to pieces and wearing it out fast, has no effect except to polish the oiled surfaces of the hard white iron spools and boxes and to make easier running bearings of them. If these bearings are oiled regularly through the hard oil cups in the weight boxes, there is no wear out to them; after months of use they show a surface as smooth and hard as glass.

Everything else about Deering and McCormick bumper disk harrows is built with as much care and thought as is given to the bearings. You can get information that will save you money, time and trouble by dropping a line to the nearest branch address below.

## Questions and Answers

ANSWERS BY EDITOR AND STAFF

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

### Wild Buckwheat—Alfalfa

A correspondent writes: Does your plant expert know anything as to the feeding value of wild buckwheat (*erigonum fasciculatum*), and wild alfalfa (*lotus glaber*), especially as to cattle and hogs?—Subscriber.

This inquiry was submitted to Prof. F. W. Woll who answers. "It is not clear from the inquiry, whether the subscriber has in mind the feeding value of the wild buckwheat plant or of the seed from the same. The latter is an important component of gram screenings and possesses a considerable feeding value when fed ground. It may also be fed whole to sheep. We have no definite information with regard to the feeding value of the wild buckwheat plant, on the other hand it is known that stock eat it readily, especially sheep. It is a common weed in grain fields and pastures in northern states.

"As to wild alfalfa, I must confess ignorance. There are about 40 varieties of the genus *lotus* growing in this country, but the only one of any importance for stock feeding is the so-called bird'sfoot trefoil or bird'sfoot clover (*lotus corniculatus*). This is an old-world plant which has become naturalized in this country, especially in the southern states. It is generally sown for pastures on dry land and is considered particularly valuable in such places because its deep roots enable it to withstand drouths. The herbage has a salty taste and is a welcome component of hay as cattle and sheep are very fond of it. It is not likely, however, that this is the *lotus* variety referred to by the subscriber, and I am unable to state just what is meant by wild alfalfa or what value it may have for cattle or hog feeding. Seed from common alfalfa, *medicago sativa*, may easily get scattered in waste places and grow without effort on the part of man. Such wild alfalfa would not differ greatly in chemical composition or feeding value from an equal weight of common alfalfa. The main difference would come in the luxuriance of the plant and in the amount of feed materials these would furnish from a given area."

### Mottle Leaf—Nitrate

I have heard much about the mottle leaf of orange trees, with various explanations as to its cause, ranging from lack of water to excessive fertilization. The mulch basin system has been advocated as a means of conserving both moisture and humus in the soil on which the trees draw for their nourishment. In the mulch basin system small dykes are thrown up around each tree and the basins thus formed are mulched with hay, straw, and manure. By this means moisture is retained after irrigation because evaporation is reduced very greatly, which is the purpose of any mulch for that matter. The mulches are effective in curing mottle leaf, according to Briggs, Jensen, and Lane of the United States department of agriculture, who have experimented to find out.

So much for lack of moisture. It has also been advanced that nitrate of soda, or Chile saltpetre, has something to do with producing mottle leaf when used continuously. I should like to hear of any commercial orange groves which any subscribers to the Cultivator may know of, which have shown mottle leaf due to the use of nitrate of soda. It is my belief that

where you prevent a crust from forming on the surface of the soil, either by frequent irrigation or by the mulch basins system, thus keeping water in the soil from evaporating, in which soluble nitrogen, potash, and phosphate may circulate to feed the roots, the moderate use of nitrate of soda will be of great value and will not produce mottle leaf. — W. Lambert Myers.

Will any subscribers of the Cultivator who have made observations report their findings.

### Pie Melons for Poultry

Are citrons, or pie melons, harmful to laying hens? Our hens seem very fond of them and we would like to feed them in abundance as they are the only feed available in the shape of greens until the rains come.—Subscriber, Winton.

Pie melons, according to Professor Jaffa, are the least valuable of all green feeds. They are 94.5 per cent water, about the same as lettuce, but they contain less than half as much ash and a little more than half as much crude protein, while the amount of crude fibre greatly exceeds that of lettuce. They contain more water than kale, about a quarter as much protein and half as much ash. They contain one-fifth more water and only about one-ninth as much protein as the common weed, malva. However, they are better than no green feed at all and can do the hens no possible harm. Let them have them in the runs to nibble at as much as they please.—J. A. K.

### Johnson Grass

Am sending root and top of grass found on my place. It spreads and is hard to plow through. — Subscriber, Chatsworth.

This is a good healthy root and rhizome of Johnson grass, one of our worst pests. It should be kept cut so as never to go to seed, for it reproduces not only by root stocks but by seed. If the seed stocks are cut off persistently it weakens the root so it spreads less rapidly and ultimately might be almost eradicated by this continual top cutting. In addition however, shallow plowing during the hot summer days aids in reducing the pest. One should give it continuous attention.

### Weevil

Am sending some little bugs that are eating holes in my beans. Some beans were affected when we gathered them from the poles. Will they destroy seed beans? — Subscriber, San Jacinto.

These are the common bean or pea weevil. The seed as soon as gathered should be treated with carbon bisulphide fumes, which is done by placing the beans in a box or bin or tight room. Then on top of the beans place a saucer or shallow dish and pour in carbon bisulphide at the rate of three pints for every thousand cubic feet. Close room or box immediately, making it air tight, and leave in these fumes for 24 hours. The gas which rises from the carbon bisulphide is explosive so no fire must be brought near. The beans should then be placed in an insect proof room or container.

### PRUNE BERRY VINES

Home gardeners who want lots of loganberries, blackberries, raspberries and currants next year should see to it that with the arrival of winter, the dormant season for plants, they put in a few hours' work with the pruning shears in order to have their plants in such condition that they will bear more and better fruit next season and in such shape that the berries can be picked with lessened danger of scratching.

At the same time strawberry plants

## This Saw Cuts 25 Cords of Wood in One Day

It is absolutely guaranteed—hundreds in daily use.

Write for our booklet "How Dan Ross Cuts 40 Cords a Day".

Delivered anywhere in the U. S. A. only

\$160.

Wade's  
Gasoline Wood Saw  
(Portable)

This wonderful invention does TEN TIMES the work of TWO MEN in the woods.

With it you can make money out of your wood simply through the immense saving in time and labor. One man can handle it on a log and two can move it from log to log. Will cut a 40 inch log in five minutes. Write us today.

should be improved by removing the older plants and giving room to the younger and more thrifty ones or by replacing with new plants old ones which have outlived their usefulness or proved to be poor in yield. Neglect of proper pruning and renewal means that bush fruits soon run into a tangled thicket, while strawberries produce only small, seedy, misshapen fruits. A small amount of care will reward the backyard farmer with many weeks of fruit.

"Small Fruit Culture in California" may be obtained free by writing College of Agriculture, Berkeley. It gives advice as to how to choose favorable soil and how to plant, cultivate and prune small fruits. Photographs are given to show the best methods of training the plants so that air and light will be admitted to all parts and the fruit be easy to pick.

Book Review

**"SUCCESSFUL CANNING AND PRESERVING"**

"Successful Canning and Preserving," a practical hand book for schools, clubs, and home use by Ola Powell of the United States department of agriculture, assistant in home demonstration work. Published by J. B. Lippincott Company, Philadelphia. Price \$2.00 net.

This book is one of Lippincott's home manuals and is the most complete publications we have seen on canning and preserving. It is dedicated "To you who are striving to 'make your best better'." The canning and preserving of food products is an important factor in household economy, since the conservation of food-stuffs, from time of production and natural time of consumption to a later time, makes for a more varied and adequate diet, and that secured at a lower economic cost. Practical success in canning, drying, preserving and brining turns upon the proper application of the principles of science involved. The great necessity for scrupulous care in every step of the whole process is imperative. A worker who follows scientific principles and is watchful of sanitary conditions will have results that are uniform and satisfying. It is easy to talk of science in the abstract as applied to such problems, but unless one can show just how this science demands that the processes be conducted in order to secure success, such applied "science" is mere pretense. There are 372 pages full of scientific and practical suggestions and illustrations giving specifically every step in canning operations. There are 20 chapters touching upon History; Bacteriology; Preparation and Equipment; Canning in Tin, Canning in Glass; Processing-Hot Water Bath; Processing at High Temperature; Fruit Juices; Fruits for Canning; Vegetables for Canning; Preserves, Marmalades, Jams and Conserves; Jelly Making; Pickling; Drying Fruits; Vegetables and Herbs; Preservation of Meats; Use of Fruits and Vegetables in the Diet; Canning Club Organizations; Business Side of Canning; Teaching Canning; and Appendix. The book is supplied with an excellent index which enables one to turn instantly to any topic desired.

**POTATO STORING DON'TS**

Don't store potatoes while they are moist.  
Don't store without first sorting into table grade and culls for feed.  
Don't expose potatoes to injury by frost after digging.  
Don't let the wind dry out the potatoes. A bitter taste will result.  
Don't store in a light room. Light lowers the quality.  
Don't cover potatoes with damp earth when storing in a hot cellar. They will start to sprout if you do.  
Don't forget to watch the thermometer. The ideal temperature is from 35 to 40 degrees Fahrenheit.  
Don't forget to sort out the decayed potatoes before the trouble spreads.

There's no law against eating turkey before and after Thanksgiving, as well as on the national holiday. The more poultry Americans eat at home the more red meat we can spare the boys in France and our Allies.

A food pledge card in the window is the sign of a patriotic home.

**"Wonderfully Satisfactory"**

**STEARNS-KNIGHT**  
American Automobile Co.  
Tacoma

"results secured in the hundreds of Stearns-Knight sold by us have been wonderfully satisfactory."

**CHEVROLET**  
W. S. Dulmage Motor Co.  
Seattle

"we are finding Zerolene a very efficient lubricant."

**CADILLAC**  
Western Auto Sales Co.  
Reno

"we consider Zerolene particularly adapted for use in high-speed "V" type motors."

**MAXWELL**  
Lord Motor Car Co.  
Los Angeles

"have used Zerolene in Maxwell cars for over three years with excellent results."

For tractors, Zerolene Heavy-Duty is especially recommended.

**Endorsed by Leading Car Distributors**

—because the records of their service departments show that Zerolene, correctly refined from California asphalt-base crude, gives perfect lubrication—less wear, more power, least carbon deposit.

Dealers everywhere and at our service stations.

**STANDARD OIL COMPANY**  
(California)

**ZEROLENE**  
*The Standard Oil for Motor Cars*

**The Farmer's Concrete Mixer**  
**SHELDON Batch Mixer** Price \$11.50 Up

The Sheldon was designed especially for the farm. Highly praised by users. Farmers everywhere call it the ideal mixer. Used today all over the United States. A big success. Small enough to be easily moved—big enough to keep men busy. Low in price. Build your own silo, tanks, troughs, floors, foundations, buildings, etc., out of concrete with a Sheldon Batch Mixer.

**Read What These Sheldon Owners Say**

I and my hired man laid a feeding floor for my hogs, 24x24, in one day; also put floor in my cow barn. My neighbor liked it so well I am not able to keep it at home.—ANDREW CHRISTENSEN, Hancock, Minn., R. 1.

We have used the mixer during past year for putting in cement foundations for a complete set of farm buildings, including silo, and like it very much.—DANA WAIGET, Jamestown, N. D.

Last year I bought a cement mixer from you with which I am well satisfied. It did not take long for it to pay for itself and I surely can recommend it to anyone needing a big mixer at a small price.—W. L. PARR, Martinton, Ill.

I am more than busy with my Sheldon Concrete Mixer. Have more work than I can do. I get \$10 a day when I work out.—JESSIE L. WITTER, Wellsville, N. Y.

The machine works fine. Have already got the job of mixing concrete for the bridges in this town-ship.—JOHN ROSE, Spartansburg, Pennsylvania.

Last spring we purchased of you a set of castings to make a concrete mixer. It was constructed per the plans furnished and it surely worked great.—D. M. BURBANK, Freeport, Ill.

**FREE PLANS**

Make your own concrete mixer. You can do it at a cost so low you can not afford to mix concrete by the shovel method. Along with our iron parts we send Free Plans and permit for making your own machine. A good way to get a practical mixer at a small expense. Or, we will sell you the complete machine, ready built.

**Make Big Money at Concreting**

If you buy a Sheldon Mixer for your own use, you can make many times its cost in a season by renting it to your neighbors. Or, if you want to go out with the mixer on contracts, you can easily earn \$5 to \$20 a day. Our customers are doing it right now. The jobs go to the man with a Sheldon Mixer every time.

**Write For Our New FREE Catalog**

Shows our full line of mixers which are sold direct to you on strong guarantee. Thirty days trial privilege. No other like it. Patented. Two styles, hand and power. Mixes 2 1/2 cubic feet a minute. One man can operate it, but it will keep 2, 3, 4, 5 or 6 men busy. Continuous chain drive. Tipping dump. Easily and quickly moved. All parts guaranteed. Does work equal to \$400 mixers. Be sure to get the catalog. Write today.

**SHELDON MANUFACTURING COMPANY, Box 897, Nehawka, Neb.**

**We Ship Direct from San Francisco**

We have just warehoused a carload of Sheldon Mixers in San Francisco to save you freight and time—can deliver your Mixer in three days if necessary.

**No Long Wait—Lowest Freight**

The Sheldon will pay for itself on first small job. Takes the backbone out of concrete. Makes possible those many small improvements that add so much to the value of your land.

**DOAK ENGINES**

**Saturday, Nov. 24, 1917****OUR ADVERTISERS RELIABLE**

We guarantee our subscribers against  
 loss through dishonesty of any adver-  
 tiser in the Cultivator. We do not at-  
 tempt, however, to adjust trifling differ-  
 ences between subscribers and honest,  
 responsible advertisers, nor will we pay  
 the debts of honest bankrupts. Notice  
 of complaint must be sent us within 30  
 days from date of the transaction, and  
 the subscriber must have mentioned the  
 Cultivator when writing the advertiser.

**THIS WEEK'S COVER**

Notwithstanding cold storage  
 houses are filled with frozen poultry,  
 placed there a year or more ago, good  
 fresh stock is commanding long  
 prices. However, it is now rumored  
 that the food administration will take  
 a hand and insist on early delivery of  
 this long stored frozen stock to the  
 consumer. If this is done it is to be  
 presumed that prices will be some-  
 what weak for the Thanksgiving  
 trade and possibly stronger for Christ-  
 mas season trade. The beautiful bird  
 on cover of this issue will certainly be  
 an inspiration to breeders to produce  
 more of the finest of this American  
 bird. This bird, Gold Nugget, weighs  
 47 pounds and has been many times a  
 prize winner. He is from stock owned  
 by J. W. Blackman.

**OVER THE TOP**

The Y. M. C. A. drive for \$35-  
 000,000 to carry home comforts so far  
 as possible into the cantonments and  
 trenches is succeeding, is the assur-  
 ance given as we go to press. The  
 campaign is not yet finished, but far  
 more than the \$35,000,000 has been  
 subscribed, and the more hopeful are  
 predicting that it will pass the \$45-  
 000,000 mark or possibly will reach  
 \$50,000,000.

The greater portion of this fund  
 will be spent in the cantonments in  
 America or in the camps in France,  
 but much of Europe and probably  
 much of Asia will feel the influence of  
 this organization as a result of this  
 great drive. The disbursement of this  
 fund will be entirely under the con-  
 trol of the national war work counsel  
 made up of 200 leading citizens and  
 will be devoted to the comfort of the  
 boys in the field, or, as is expressed  
 by the Y. M. C. A., will support physi-  
 cal, educational, social and religious  
 activities amongst the men.

**PLANT ORCHARDS**

It has been suggested that  
 planting of orchards or crops which  
 do not bring in immediate returns be  
 discontinued. We believe any such  
 advice is most unwise. There were  
 thousands of acres of beans planted  
 last year in lands which had been fit-  
 ted and planted to orchards as yet  
 only one or two years old, which  
 would never have been planted to  
 beans had they not had this thorough  
 preparation for orchard use. In plant-  
 ing orchard trees as usual the pro-  
 ducers of California will be fitted to  
 produce greater acreage of intercrops  
 and get at the same time the double  
 returns from orchard care and cash  
 received from the intercrops.

Fortunately such advice has not  
 been very seriously taken, for we are  
 informed that nearly every orchard  
 tree which can be secured has been  
 contracted for for this season's plant-  
 ing.

Plant more trees, and when the  
 time comes, plant intercrops. Don't  
 do your bit; do your best.

**TAXES ARE DUE**

They will soon become delin-  
 quent. In some counties they will be-  
 come delinquent on next Monday; in  
 others on the first Monday in Decem-  
 ber. Don't get caught with the 15 per  
 cent penalty.

Between Liberty Loan, Red Cross,  
 Y. M. C. A., the Belgians, the Armen-  
 ians, and a thousand and one other  
 calls we all would be perfectly will-  
 ing to forego the pleasure of paying  
 taxes this year, but as they remain  
 among the certainties of life every  
 year it will be well to attend to them  
 before the 15 per cent penalty is  
 added.

**INCOME TAX**

There will be many perplexing  
 problems to be settled by the farmer  
 when he comes to fill out the blanks  
 which the government will furnish to  
 all whose incomes exceed \$1000. Pre-  
 sumably nearly every farmer in Cali-  
 fornia will be concerned in this re-  
 port, and, as we have indicated under  
 "War Taxes" the question is to be  
 taken up more fully in a later issue.  
 Every producer should be warned to  
 be so shaping his books that he can  
 make this report complete.

We have had interviews with the in-  
 ternal revenue collectors in the Los  
 Angeles office and find them most  
 ready and willing to give information  
 on all points on which rulings have  
 been made. The local offices have not  
 yet received blanks, but it will be well  
 for every farmer to write to the near-  
 est revenue collector's office and ask  
 for these blanks and have them in  
 hand as soon as possible so as to learn  
 the government's requirements. We  
 take it the blanks will be in hand with-  
 in a very few days and will be im-  
 mediately forwarded to every one re-  
 questing them.

While waiting for the blanks and  
 for more definite information, which  
 the Cultivator will give later, we ask  
 our subscribers to send in questions  
 or problems, and they will be submit-  
 ted to our attorney or to the revenue  
 collectors, and every service possible  
 for us to give will be rendered.

Such questions as: "What is in-  
 come? What are expenses? What  
 losses may be deducted? What losses  
 may not be deducted?" are now hav-  
 ing answers shaped for later publica-  
 tion. Penalties for not making re-  
 ports are severe. The report cannot  
 be made until after December 31, 1917  
 and must be made prior to March 1,  
 1918. The report must cover the en-  
 tire period from January 1, 1917 to  
 December 31, 1918. The income tax  
 is to be paid prior to June 15, 1918.

**WAR TAXES**

As to the income tax, more in some  
 December issue, but as a hint to aid in  
 shaping up accounts prior to that time  
 let us refer this week to depreciation.  
 The farmer has never worried very  
 much about his "overhead." It may  
 now prove a serious obstacle in mak-  
 ing proper report which will be neces-  
 sary with everyone whose income ex-  
 ceeds \$1000 if unmarried or \$2000 if  
 married. At least there is one fea-  
 ture of overhead which many farmers  
 do not keep account of and that is de-  
 preciation of implements, buildings,  
 livestock, etc. Such depreciation will  
 be considered if properly reported in  
 filling income tax blanks. No manu-  
 facturing or mercantile business suf-  
 fers from depreciation to such an ex-  
 tent as does the farmer's. This is be-  
 cause of his failure to properly house  
 or properly care for his implements.  
 At best the life of a tractor and many  
 of his implements and all his horses  
 are but short.

The following information was given  
 to us by the revenue office recently  
 in answer to this question: "How  
 much depreciation will the revenue  
 service permit on a tractor?" In ex-  
 planation we referred to some farm-  
 ers who say that at the end of the first  
 year a tractor has depreciated 50 per  
 cent, thereafter 10 per cent a year,  
 and the reply was given to us that this  
 large depreciation for the first year  
 would not be permitted. If the life of  
 a tractor was six or seven years, then  
 an equal depreciation must be deduct-  
 ed for each year. Another question  
 was asked as to whether in the case  
 of the track laying type of tractor,  
 where new track has to be attached,  
 should this be considered as expense  
 of up keep or as permanent improve-  
 ment? On this point no definite in-  
 formation was given other than the  
 "guess" that it would be considered  
 as expense. However, on these points,  
 more later.

**Stamp Taxes**

Bonds, debentures, certificates of  
 indebtedness dated after December 1,  
 1917, five cents for each \$100.

Indemnity bonds, 50 cents each  
 bond. Where a premium is charged  
 for the execution of such bond, one  
 per cent.

Capital stock, five per cent on each  
 \$100. If the stock is without face  
 value, five cents per share.

Transfers of stock, agreements to  
 sell, memoranda of sales, or transfers  
 of legal title to shares or certificate of  
 stock, two cents on each \$100, or if  
 stock has no par value, two cents on  
 each share.

Promissory notes, two cents on each  
 \$100 or fractional part.

Deed, grant, assignment, or any con-  
 veyance of realty, to a value of \$100  
 to \$500, 50 cents, with 50 cents addi-  
 tional on each \$500 or fractional part.

Steamship tickets issued in United  
 States for passage to any port not in  
 United States, Canada or Mexico, if  
 costing \$30, \$1.00, \$30 to \$60, \$3.00.  
 More than \$60, \$5.00.

Proxies and power of attorney for  
 voting at business meetings, except-  
 ing religious, educational, charitable,  
 fraternal or literary societies or pub-  
 lic cemeteries, ten cents each.

Playing cards, seven cents per pack.  
 Parcel post packages where postage  
 amounts to 25 cents or more, one cent  
 each 25 cents or fractional part.

Any product or merchandise sold on  
 board of trade or exchange for future  
 delivery two cents each \$100 or frac-  
 tional part.

**Penalty**

Failure to affix proper stamps with  
 intent to evade the law subject the of-  
 fender to fine not exceeding \$1000 or  
 imprisonment for six months, or both.

**This Week's War News**

The English are approaching Jeru-  
 salem, and it is rumored the Turks  
 will soon be driven from that portion  
 of the Holy Land.

It is rumored that Mr. Romanof of  
 Tobolsk would establish the empire of  
 Siberia, but empire founding, even in  
 Asia, is not progressing very rapidly.

Suffering and starvation are extend-  
 ing in Armenia, and the civilized  
 world is being appealed to for aid in  
 supplying food to that wretched peo-  
 ple.

Lord Northcliffe has paid a high  
 tribute to American efficiency and to  
 the vigor with which our war prepa-  
 rations are being prosecuted. He ap-  
 peals to Europe to profit by America's  
 example.

A reign of terror is on in both Pe-  
 trograd and Moscow. Many of the  
 finest buildings in both cities have  
 been wrecked, and there is looting  
 and murder on all streets. Kerensky  
 has a following, but it is not strong  
 enough to restore order.

An American torpedo boat destroy-  
 er, the Chauncey, has been sunk and  
 21 American lives sacrificed, said to be  
 the result of a collision, details not yet  
 made public. Daniel B. Crane of Los  
 Angeles, and Earl Parker Bower of Or-  
 ange County were members of the  
 crew.

Premier Lloyd-George of England  
 has won in his fight for an Allied War  
 Counsel, notwithstanding the opposi-  
 tion of former premier Asquith. Amer-  
 ica is demanding, and nearly all the  
 Allies are agreeing, that there must  
 be unity and coordination in directing  
 the war.

The principal war event of the past  
 week is the Y. M. C. A. drive which  
 has provided more than \$35,000,000,  
 exact amount not yet determined,  
 which will increase the fighting power  
 of American boys by improving the  
 morale and giving a bit of home life  
 to them in their camps.

There has been little comfort in the  
 news from the front during the past  
 week. Haig is still pounding on the  
 West front, and Tuesday's reports  
 state that the Teutons are retiring at  
 least a mile. Some of the American  
 boys have been killed in the trenches  
 by heavy Teuton bombardment. Our  
 boys have honored their flag and given  
 as good as sent.

The situation in northern Italy is  
 serious. Von Hindenburg has been  
 transferred and the drive which has  
 been continued day and night is  
 fierce. The Piave has been crossed  
 at two points, and the retirement of  
 civilians and the removal of property  
 from Venice has been continued. Re-  
 inforcements of infantry, and espe-  
 cially of heavy ordnance from France,  
 are arriving daily, and there is still  
 hope of maintaining the line north of  
 Venice.

Destruction of food and war mun-  
 itions, dynamiting or firing vessels in  
 harbors, destruction of all kinds of  
 property, have been continued or at-  
 tempted in the United States. Some  
 spies have been killed, more have  
 been imprisoned, and the decree that  
 all subjects of the kaiser must regis-  
 ter is being more rigorously enforced.  
 The president has issued a proclama-  
 tion restricting free movement of all  
 enemy aliens. Unnaturalized male  
 Germans over 14 years of age must  
 register at once and then must report  
 periodically to federal officials. They  
 may not travel without permit; they  
 must not approach within 100 yards  
 any wharf, warehouse, grain elevator  
 or other establishment specified in the  
 proclamation. They may not travel  
 under any circumstances on the  
 Great Lakes or any river or waterway.

**CULTIVATOR CHISEL TEETH**

It is my business to decide if there  
 shall be war. There is only one law and  
 that is my law.—The German Emperor.

Food pledge cards and thrift stamp  
 cards are additional evidence that the  
 men behind the men behind the guns are  
 not standing still on the job.

The suggestion has been made that  
 drafted aliens, instead of being exempted,  
 be given the choice of military serv-  
 ice or return to their native land within  
 90 days.

Six hundred German spies taken in the  
 Great Lakes region are now free boarders  
 in our federal prisons—this since April  
 2. We may be slow, but there's nothing  
 so very slow about U. S.

# Agricultural News Notes of the Pacific Coast

## Northern California

Rice threshing in the Butte County fields is practically over.

Chico, Butte County, purchased this year about 1400 tons of prunes.

Several barns and farm buildings have been burned in Yolo County.

Organization of a farm center has been effected at Chico, Butte County.

The Northern California Counties Association is appealing for 5000 members.

"Does it pay to feed grain" is being discussed by dairymen of Humboldt county.

Butte County ground squirrels are digging themselves in because the poison squad is out.

The sugar factory at Hamilton City, Glenn County, is turning out about 6000 bags of sugar daily.

The auto headlight law is no joke, and warning is given that every headlight must conform to the law.

Owing to California's great production, it will probably be the bean price center of the United States.

It is announced that the university extension will put men in the field to encourage greater poultry production.

Chico is sending 2600 boxes of prunes for use of the Sammies in France. The shipment is valued at 10,075.

Bean growers of Yolo County are complaining that the efforts of the food administration and the large buyers have depressed prices.

Tehama County has applied for 90 loans and been granted by the national association ten. Others will be granted as rapidly as possible.

The first shipment of new crop of beans from the Orient was unloaded early this week in San Francisco. There were about 5000 sacks.

Permits have to be secured by farmers who have stored their grain in warehouses to withdraw same even for use on owner's farms for seed.

The Sebastopol Apple Association which has managed the successful Gravenstein Apple Shows for several years, has closed its affairs and retired from the apple show business.

Cattlemen in session at San Francisco have decided to make appeal to Washington in favor of exemption of herders and others essential to the success of the livestock industry.

Many citrus growers of Butte County who refused to attend the standardization meeting later passed resolutions urging use of "substantially" instead of "fully" colored.

The state reclamation board has ruled that land owners in Butte County rice fields shall regulate the flow of waste water so that not to exceed 500 second-feet shall run into Sutter basin.

The Alameda County Poultry Association opens its doors to its great poultry, pigeon and pet stock exhibit at Oakland, Thursday, November 29. It will continue to and including Sunday, December 2.

Bean growers of the lower Sacramento Valley are appealing to the food administration for definite assurance as to future course in the bean market. There is assurance that the price of beans will be controlled, but no further statement being made, it leaves growers and dealers at loss as to how to proceed.

## Central California

Tulare County is shipping alfalfa at \$20 per ton.

The Oakdale almond crop is double that of any former year. It will net the section over \$100,000.

Entries for the seventh annual Stanislaus Poultry Show closed November 28. The show opens December 5.

Visalia feeders are fattening 30,000 head of sheep for the Western Meat Company. Beet pulp is the principal feed.

The threshing of the rice crop in Claus, Stanislaus County, shows the crop to be running about 45 sacks to the acre.

The food administration has limited confectioners and other large users of sugar to 50 per cent of usual purchases.

Madera County hunters are trapping coyotes and they find a sprinkling of raisins around traps an excellent bait.

Stanislaus and other communities of San Joaquin County are planning for a greater number of bean threshers before another harvest season.

Vineyardists of Central California received over ten and a half million dollars from the California Associated Raisin Company for their 1916 crop.

Deputy State Commissioner Weldon and County Commissioner Mills of Butte County are discussing standardizing oranges and the orange pack with citrus growers of Butte County.

Eldorado County irrigators are holding meetings and discussing plans for a proposed irrigation district. The present problem is to determine the boundaries of the district.

## Southern California

Lima bean growers have now been paid six cents per pound, with other payments yet to come.

Early completion of the great reservoir near San Dimas, Los Angeles County, is promised.

One turkey grower of Los Angeles County reports an offer of 40 cents live weight for turkeys.

Five hundred grammar grade and high school pupils of Orange County are still working in walnut orchards.

Brawley and other lettuce growing sections of Imperial County are beginning the making of crates for the next crop.

The department of agriculture has estimated that California will produce this year 1,552,000 sacks of 80 pounds each of limas.

Southern California's sugar beet campaign is practically over with the greatest production ever, though some of the factories report slightly less output than the 1916 campaign.

Cantaloupe growers of the Imperial Valley are discussing contracts for disposal of next season's output. Shippers are chary because of possibility of government taxing all profits ten per cent.

Southern California is still shipping thousands of tons of tomatoes but the output will be short of that anticipated. The season began with the first full car shipment from Imperial Valley, June 4. The full car shipment will continue until stopped by frost.

The 18th annual meeting of the San Dimas Orange Growers Association brought out the fact that the past year has been the greatest in the history of the association. The returns to the growers were over \$600,000 and over \$70,000 was paid out for labor.

## The Coast and General

There are 136 tractors on the 45 sugar plantations of the Hawaiian Islands.

The Yakima Valley's potato crop this year will be only 85 per cent of normal.

Yakima's million dollar sugar factory is in operation for the first time this year.

Sugar shortage in France is causing investigation which will lead to greatly increased production in 1918.

Poultry and pet stock people of Thurston County, Washington, are holding their annual show this week.

Irrigationists of the state of Washington meet December 10-11 at North Yakima to discuss irrigation problems.

Cotton speculators have been warned by the food administration that profiteering, either in cotton or seed, must stop.

Excessive profit from food handling is to be prevented through the federal licensing system in effect since November 1.

The crops on the Minidoka irrigation project in Idaho aggregated five millions of dollars this year as against a little over two millions last year.

The food administration has ruled that confectioners shall be limited to 50 per cent of their former sugar demands. California grocers are now refusing to sell more than 20 pounds to a customer.

There are in the United States 5424 farmers cooperative organizations, according to report of the United States department of agriculture. There are 213 cooperative cotton marketing organizations doing an aggregate business of nearly \$30,000,000.

## "Liberty Bond" Trees

We will accept Liberty Bonds as full or part payment for trees.

In buying a bond you have helped Uncle Sam. By exchanging Liberty Bonds for Silva-Bergtholdt trees you increase the return of your original investment. Silva-Bergtholdt trees in your orchard add to its productiveness and insure your future profits.

**Good nursery stock is mighty scarce.**

The visible supply is 50% of normal and the demand heavier than usual—that's why you will find it profitable to buy now.

*Submit us a list of your wants for special prices. Do this now while our assortment is complete.*

Our foot-hill trees are free from the root diseases common to other localities. Propagated from selected parentage—roots fibrous and well-branched—trees hardy and of toughened fibre—features that spell success in tree planting.

Write out your list. Mail it right now.

Send for your copy of our book—"California Fruits," written by a practical fruitgrower of many years' experience. Tells what to grow, where to grow it and how to grow it. And—it's free.

*J. E. Bergtholdt*  
Secretary and Manager.

**SILVA-BERGTHOLDT CO.**  
NEWCASTLE - CALIFORNIA

# Unusual Holstein Offering!

Our consignment to the Quality Sale, Sacramento, December 5, 1917, consists of the following ten highly bred animals, all of show ring type and quality.

Miss Pontiac Nudine of Springvale

Miss Pontiac Nudine of Springvale 175955, who has a 30 pound record made at five years. Heavy in calf to King Segis Alcartra Prilly, a 30 pound son of the \$50,000 Bull, and Grand Champion Bull at California State Fair, 1917. Also a yearling daughter of this cow by a 30 pound sire and bred to King Segis Alcartra Prilly.

Miss Korndyke Mercedes 121428, Grand Champion cow—California State Fair, 1917. Heavy in calf to King Segis Alcartra Abbekerk, a 30 pound son of the \$50,000 Bull.

Oakvale Jennie Korndyke 173499. A five year old cow with a 27 pound record, who has a 30 pound full sister. Heavy in calf to King Segis Alcartra Prilly.

Two daughters of the \$50,000 King Segis Pontiac Alcartra. One from a 31.35 pound dam—~~one~~ whose first seven dams averaged over 31 pounds butter in seven days. Both bred.

A daughter of King Walker 5th and out of a 30 pound cow. Safe in calf to King Segis Alcartra Prilly.

A daughter of the great sire It and from a 27 pound three year old daughter of King of the Pontiacs. Bred to King Segis Alcartra Prilly.

A daughter of King Mead of Riverside and from a 23.63 pound dam, whose dam is a 30 pound cow. Bred to King Segis Alcartra Prilly.

A great young bull born January 11, 1917. A high class show bull whose dam is a 31.70 pound five year old, and capable of increasing present record. His sire Spring Farm King, who is a 34 pound son of King of the Pontiacs and a full brother to the first 44 pound cow K. P. Pontiac Lass. The records of the first three dams and the sire's full sister of this bull average 34.41 pounds butter in seven days.

## BRIDGFORD COMPANY

KNIGHTSEN, Contra Costa County CALIFORNIA

## Prize Winning HAMPSHIRE

The farmer who wants a hog that puts on 200 lbs. of firm meat at six and a half months of age buys the Hampshire.

F. A. Langdon  
Manager

Llano Vista Ranch, Perris, Cal.

Boars, gilts, bred and open, for sale from the P. I. E. Champion Hampshire stock, just as nearly perfect as they make them.

F. V. Gordon  
Owner

## Poland Chinas, Medium Type

Choice breeding stock, both sexes, from Panama-Pacific International Exposition prize winning strain; 12 firsts, Junior Champion and Reserve Grand Champion Boar, Junior and Senior and Grand Champion Sows, \$2145 cash awards. Write to

**M. Bassett**

Hanford, Kings County, Cal.

## SERVICE TO THE BUYER TO THE SELLER

Economy of time, effort, and money is only one of the many services our organization is delivering to both sellers and buyers of registered livestock in public auctions. If you want to consign cattle for public sale, or disperse your herd to best advantage, write us about it.

**California Breeders' Sales and Pedigree Co.**

## Who's Who

With the issue of August 11 the Cultivator started its series of "Who's Who" articles to bring before its readers some of the livestock producers of California who are responsible for the large development of the industry. Where did they come from and how long have they been engaged in California development, also how do they look, so pencil and camera are to be used, and some homely, everyday photographs and notes regarding them will bring us closer together. Bear in mind we say "homely photographs" and not photographs of homely people. The idea we wish to convey is that so far as possible we will secure photographs in everyday surroundings at the homes of the livestock producers.

Written for California Cultivator

RS Eliza Shepard, manager of the Jack London Ranch at Glen Ellen, has been identified with the breeding of registered Shorthorn cattle, Shire horses and Duroc-Jersey hogs for about three years. Her most valuable investment was Roselawn Choice, the great herd sire bred by Roselawn Stock Farm, he by Gibson's Goods, a bull brought to the Coast by the late Tom Gibson. With this bull at the head of the London herd Mrs.

don, and the untimely deaths of both horse and owner was a remarkable coincidence since they died but a few days apart.

Mrs. Shepard's enthusiasm for the livestock business, her active interest in organization work, keen selling ability, and thorough sportsmanship are the reasons why she occupies her high place among the successful breeders of California.

Mrs. Shepard finds time to look after charitable matters, has sent a son

Mrs. Eliza Shepard

Shepard, the manager, was enabled to fill out a show herd which has won consistently wherever exhibited. She has won championships and grand championship ribbons several times with her Shorthorn herd.

So far the London ranch has not shown Durocs at the fairs as the demand for breeding stock has kept the herd to a limited size. But the London Shire horses have been big show winners since the P. P. I. E. In 1916 Neuadd Hillside, the great stallion, was grand champion at Sacramento. This sire was a favorite with Mr. Lon-

to fight under the stars and stripes, has an inexhaustible fund of wit and humor, and holds a high place in the esteem of her fellow breeders. Together with Mrs. Charmion London, widow of the late Jack London, she is doing more than her share toward increasing the production of food and meat animals.

The picture appearing herewith was snapped on the London ranch. The Shorthorn heifer is London's Laverder Lady and she won first in her class at the 1917 California state fair, and is the especial pet of her mistress.

## Dairy Farming Under War Conditions

By F. W. Well.

CONDITIONS following in the wake of the war have affected the business of dairy farming, as they have other vocations, in several ways:

They have caused a marked increase in prices for feed and supplies; a scarcity of labor resulting in high wages, and, to a relatively smaller extent, they have increased the prices paid for dairy products. The purpose of this article is to discuss briefly how the dairy farmer may meet the new conditions created by the war so as to receive the returns from his labor and the profit on his investment to which he is fairly entitled. The economics of dairying under present day conditions will not be discussed, beyond calling attention to two facts: First, that milk is today, as it has been in the past, the cheapest source of animal food available; its use in the household both by children and adults may, therefore, be encouraged to advantage. Second, that any increase in the price of milk that may have occurred lately, has not been in proportion to the increase of the cost of producing the milk.

The dairy farmer cannot readily change these conditions, and he has to face them and make the best of them. He has it in his power, however, to cheapen very materially the production cost of the milk, both by adopting a system of feeding that will cause his cows to yield the largest flow of milk of which they are capable,

and by improving his herd through disposal of poor producers and the use of a good dairy-bred bull, so that the production of the herd may be gradually increased.

According to best information available, the average production of butter fat by the dairy cows in the state does not reach 150 pounds of butter fat per year, corresponding to a milk yield of about 4200 pounds (500 gallons). Practical experience has shown that it is possible in many cases to raise this yield by 50 per cent, or even 100 per cent, by adopting a more liberal and suitable system of feeding the cows, and that the dairy may thus be changed from a losing proposition to one giving good returns for the cost of feed and labor and other running expenses. If the annual production of California cows is only 150 pounds of butter fat per head, large numbers of cows do not reach even this figure, and the only reason why the owner of such cows can be satisfied with the results of this labor is that he markets the feed grown on the ranch through the dairy and receives fair market prices for these, but 150-pound cows can give no returns to the dairy farmer for the labor and expense involved in producing the milk. Practical dairy experience has established beyond question, however, that marked improvement in production may be brought about by either or both of the

## "MACHINES MUST TAKE THE PLACE OF MEN"

Let the "Alpha" Do Your Work

Cut Feed  
Saw Wood

ther plan is to test it first by turning in an animal of inferior value. If it refuses to eat, it is probable that the plants are not safe. Hungry stock are, of course, much more liable to be fatally poisoned than those given some feed previous to turning into the field.

"The fact that losses have occurred

does not justify the condemnation of the sorghums as a stock food. Further losses may be avoided by a little care. No sorghum fodder should be destroyed, even if proved to contain prussic acid, since further growth and drying may render the vegetation harmless, and it can at least be rendered harmless by being made into hay or silage."

## Two More 1000 Pound Cows in Morris Herd

While the spectacular recent event in the herd of registered Holsteins owned by A. W. Morris & Sons Corporation, Woodland, is of course the world's official yearly butter record

record at past 11 years of age, this young cow seems to have future possibilities. She is a remarkably fine individual, is sister to both the sire and dam of Aaggie Acme of Riverside 2nd.

Aaggie Acme of Riverside 2nd

established by Aaggie Acme of Riverside 2nd, two other members of the herd have distinguished themselves in yearly tests.

Aralia De Kol 3d, daughter of the former world's record cow, Aralia De Kol, has fulfilled the promise she held out as a junior two year old when she established a new California record in her class by producing 772.93 pounds butter in one year. Her latest record, just completed, is 24,548.8 pounds milk and 1101 pounds butter in one year. When it is remembered that her great dam made her world's

and makes the third 1000 pound daughter of her sire, Juliana King of Riverside.

The other half ton butter producer is Hartog Creamelle De Kol, who after making 26.86 pounds butter and 621.1 pounds of milk in seven days, went over the long distance and has just completed a year's record of 26,457.1 pounds milk and 1046.87 pounds butter. She is sister to Pauline Creamelle Mercedes that made a seven day record of 614.3 pounds milk and 30.22 pounds butter in the Morris herd some months ago.

## Cattle Brand Law

P. Iverson, executive officer of the state cattle protection board, writes regarding enforcement of the act to create a cattle protection board

and give it power to protect breeders and growers of cattle from theft and to provide for the registration of cattle brands and the licensing of cattle slaughterers, inspection of hides for brands and marks, etc., in effect that this law, "while new to California, is old in quite a number of the other Western states, and I have become impressed with the fact that many cattlemen fail to realize or understand just what it means, and I think that you can render your community a valuable service by giving publicity in your paper to the provisions of this law.

Cattlemen and Slaughterers Attention

"It is of particular interest to cattlemen to know that the law provides that no cattle shall be branded with a brand not recorded with the cattle protection board. There seems to be a mistaken impression in some sections that recording is optional with the cattle owners, but section four of the act is very definite in its language. It is also believed by some that recording with the county recorder is sufficient, but this is erroneous.

"The last legislature passed a law which required that to perpetuate marks and brands it was necessary to re-record them in the several counties after advertising notices in the papers. This resulted in an apparent conflict of the statutes and the question was submitted to the attorney general who

Woodcroft Ybma Pletje

This cow will be offered at the Guaranty Sale in Sacramento by McAllister and Sons. She has a seven day record of 51.28 pounds, 30 day record, 124.02 pounds butter. She is safe in calf to it.

advises that all cattle brands must be recorded with this board or they cannot be given proper recognition (except pure bred cattle entitled to registration).

"It is particularly urgent for cattlemen, who wish to continue using their brand, to make early application with this board for recordation, as priority of application may have considerable bearing on the board in granting permits for the use of different brands and unless so recorded their use is illegal.

"The fee for registering a brand is \$2.00. Slaughtering fees are as follows: less than ten head per month \$1.00; over ten and less than 50 head per month \$10; and over 50 head per month \$25 per year. All fees are payable annually in advance.

"Cattlemen desiring forms for recording cattle brands, or forms for application for slaughterhouse license and copies of the law, can address Cattle Protection Board, Sacramento."

Lady Leola Hengerveld  
28.08 pounds butter in seven days. Contributed by R. F. Guerin, Visalia, to Sacramento Guaranty Sale.

Jennie Terzool Hicks 4th  
600.3 pounds milk, 32.7 pounds butter seven days. Contributed by Palo Alto Stock Farm, to Guaranty Sale at Sacramento.

#### AT THE PACIFIC INTERNATIONAL

Prof. Gordon H. True and herdsmen of the university farm at Davis

are at the Pacific International with a bunch of prize winners—perhaps. In any case some remarkably fine animals have been taken up to show the Northwesterners some of the work of the University of California.

Stockyard figures gathered by the food administration show that 73.3 per cent of the calves slaughtered at nine large packing points in this country during the first nine months of this year were males.

Miss Pontiac Nudine of Springvale

30.03 pounds butter in seven days. Contributed by Bridgford Company, Knightsen.

#### THE HOLSTEIN EVENT OF THE YEAR

No livestock event has aroused so much interest throughout the Pacific Coast as the announcement of the Holstein Breeders' Guaranty Sale to be held at State Fair Grounds, Sacramento, California, on Wednesday, December 5. Indications are that a record crowd will be in attendance to take part in this sale which promises to make Holstein history. The attractive catalog of the sale, which is now being distributed, reveals a wonderfully well bred lot of cattle, that appear fully to justify the claims made at they are the highest average lot of Holsteins ever offered in one sale ring in America.

Recently completed records have brought into still greater prominence any of the offerings, it being noted among them that the new world's official record butter cow for 305 and 365 days, the world's record for two years, Aaggie of Riverside 2nd, has five sisters in the sale, all of which are out of dams with excellent records up to over 31 pounds butter in seven days. Then there is a splendid daughter of Infired Hotelling, one of whose daughters recently completed a record of over pounds butter in seven days. Daughters of Segis Pontiac De Kol also received the benefits of three past records just completed by three of their sisters. One of them, Aralia De Kol Pontiac Mead has broken the California junior two year old record for yearly butter production by a wide margin, her record being 18,398 pounds milk and 934.25 pounds butter. Two other daughters of the same sire, Aralia Mead Pontiac De Kol, a senior two year old, and Cobossie Prudyke Burke, a junior two year old, made records of 698.30 and 664.75 pounds butter in one year.

The highest seven day record cow in the sale, Jennie Terzool Hicks 4th, 32.71 pounds butter in seven days, is not only the highest seven day record cow ever offered for sale in California, but she is also the highest yearly record cow ever offered in the state. By sale date she will have been on yearly test just about months, and will have to her credit about 1075 pounds butter. She and her son and daughter promise to be one of the star attractions.

Woodcroft Ybma Pietje, 31.28 pounds butter in seven days, not only has a great record but is one of the most promising and pleasing cows a discriminating buyer could wish for. She also has two daughters in the sale, one sired by King and of Riverside and the other by a son of Pontiac Korndyke. Both of these heifers are beautiful individuals, and the dam and two daughters ought to go home together.

Korndyke Sadie Vale Star-Rena, the national daughter of King Korndyke of Vale, is the sort of heifer that all breeders want. Her seven nearest dams average 33.86 pounds butter in seven days, second highest average in the world, and the highest average for any heifer ever offered either at public or private sale.

The beautiful young daughter of the California state record two year old, K. Tola Joe, is bound to be much sought after by leading breeders as she carries the blood of some of the most wonderful producers of the breed and is herself a sweet individual.

One might go on through the entire catalog and find much of outstanding interest in the pedigree of each individual. Owing to the large number to be sold in one day, the sale will open promptly at 10 o'clock a. m., Wednesday, December 5, at State Fair Grounds, Sacramento.

## no limitation of ground

Whatever the condition of the soil, the YUBA Ball Tread Tractor is the master.

Here's the tough adobe land requiring deep plowing to turn up for the air to penetrate and disintegrate. The strength of your best teams is worn out, and the soil is not plowed deep enough.

The powerful YUBA forces its way through it like a tug boat hauling a great ship to sea. It is built for this hard job and does its work successfully.

One man and a YUBA does the work of several men and a lot of horses—and does it better.

Have you soft, sandy soil, where the broad tread of the YUBA will not sink—where the time is valuable

and one man could cultivate forty acres a day?

Have you soil where horses sink deep and make slow progress—where the evenly balanced weight of the YUBA Ball Tread would not pack the ground—where the perfect mechanism, the accurate machining, and the high-grade materials used in the construction will save break-downs and stopping for repairs?

## The Weak Place in the Poultry Industry

Written for California Cultivator By Jean A. Koethen

**N**O CHAIN is stronger than its weakest link. Any system or scheme of things may go on for a while, perhaps for generations, in spite of some hidden, fatal weakness, but when a crisis comes everything depends on the strength of that weakest place and on the possibility of repairing it. The poultry industry is facing such a crisis today. While feed prices were reasonable the price received for eggs was not such a vital matter. Now with the cost of production far exceeding any income that can be hoped for from market eggs, poultrymen are becoming panicky and quitting. I have seen it stated recently that 8000 breeders have given up the business on the Pacific Coast, not because they wished to, but because it costs \$7.50 to feed a hen and only a blue ribbon hen can lay eggs enough to pay for her feed.

The situation is one which needs to be faced squarely and not smoothed over. Is the poultry industry built on such a flimsy foundation that it cannot stand the slightest gale? Whether it costs \$7.50 a year to feed a hen or \$4 or \$3.50, we all know that the cost of feed has trebled in three years while the price of eggs has increased not more than 50 per cent.

No sane poultryman would like to see the maximum price of eggs increased. We talk about dollar eggs, but who will pay a dollar a dozen for eggs? They are worth it in comparison with the prices of meat, nevertheless, only invalids and a few of the very rich would ever think of paying such a price. What the industry needs is not higher prices in the fall when all eggs are produced at a loss, but an evening up of the price throughout the year so that they shall average 50 cents a dozen instead of 30 for the year's output.

As things stand now the price of eggs is controlled absolutely by the speculators who buy eggs in the spring for from 20 to 25 cents a dozen and put them on the market in the fall for from 45 to 60 cents. The producer is in the hands of these speculators and lets them say what he shall receive without even protesting at the injustice of such a system. Instead of protesting he submits as long as he can, and then when he has lost all the money he can afford to lose, turns to some other business for a living.

What the poultry producer needs, and what he must have, if he is to remain a poultry producer, is an organization similar to those which have been in vogue for years in Denmark, Sweden, Canada and South Australia, a cooperative organization through which all the poultrymen of each state, federated into a national organization, shall collect, put in storage and market direct to the consumer the whole poultry output. The fact that such an organization has been a success in other countries is proof enough that it could succeed here if all producers went into it. As long as any branch of the business is left to outsiders, just so long will the producers be robbed of their just profits.

The Canadian egg circles are a familiar example of the way in which these organizations are conducted. In these circles eggs are collected several times a week from the producers, are marked with each producer's mark, candled, and rotten or imperfect eggs charged against the producer's account. A producer who continues to send in eggs of poor quality is first warned, then fined. Eggs are stored by the organization's own storage plant in spring and put on the market at a time and in a way to best conserve the interests of the producers. Everything is done by the organization, and the producers themselves are "it".

That the marketing end is the weak place in the poultry industry is beyond question. We have learned how to raise young stock with a minimum loss of life; how to make hens lay by proper feeding and care; how to breed to increase egg production,—that is, we are learning these things, and books and farm papers are so full of

advice that any one who cares to improve his flock or his methods has only to study and follow directions. When it comes to marketing, we are helpless children, turning our eggs over to the grocer, if we happen to be small producers, for whatever he is willing to give us in trade, and sending them to the commission man, if we count by cases instead of dozens, anxious only to have them off our hands and be rid of all responsibility. Don't we really deserve the punishment that has come upon us, and isn't it time we stiffened our backbone a little, and put our brains to work on this greatest problem of all? Maybe the Canadian way or the Danish way is not just what we need, but surely there is some way in which American poultrymen may organize to put down the speculator. We have had great hopes of Mr. Hoover, but he is a busy man and there may be no industry left by the time he comes to the rescue.

### BROODY HENS CUT EGG PROFITS

Now that the hatching season is near the poultry raiser will be interested not in persuading hens to sit but in breaking them up. Broody hens greatly reduce the egg yield and in this time of egg shortage it is important that each hen be kept busy. H. L. Kempster of the Missouri college of agriculture says that it is a mistake to let them sit simply because they want to. If they are allowed to follow their inclinations they will sit indefinitely. If they are broken up they will begin laying again in about ten days provided they are in good condition.

Such methods as dipping the broody hen in water are useless in breaking her up and they may impair future egg production. Mr. Kempster suggests that as soon as the hen shows signs of broodiness she be removed to a slat or wire bottom coop. She will be easier broken up at first than later. Broodiness is quite largely a state of mind. If the broody coop is put where the hen can see the rest of the flock she will grow restless. After four days let her return to the flock. By this time she will have changed her mind and will go back to laying. Be sure to feed her liberally while in the coop, for laying hens must have a surplus of fat. A hen in poor flesh rarely lays. A little attention to the broody hen will make a great difference in the looks of the balance sheet. In these days of high priced eggs it is important that the hen take as little vacation as possible.

The early molting hens are the ones that can be depended upon to fill the egg basket this winter. If a hen does not get through the molt before cold weather sets in, the chances are two to one that she will not get to laying until spring. From the fancier's standpoint, however, where eggs for hatching are made a specialty, it is not always desirable to have the hen lay heavily through the winter, and in this case the late molting hen is perhaps most desirable.

## DRY MASH

### The Best Feed on the Market

Has the highest protein at the lowest price \$2.80 per 90-lb. bag, subject to market changes; see that your hens eat as much Dry Mash as they do grain; feed them lightly of grain in the morning and make them work for it; either have a scratching pen or spade up a part of the ground and rake the feed under; keep "A-1" Dry Mash in a dry form before them all day; about one hour before feeding turn their grain in the evening. Wash their Mash and let them eat all they will; put it on top of the Dry Mash; then feed them all the grain they will eat; this stuffing process will give them a full crop to carry them through the long night of inactivity; analysis is printed on every bag; give it a trial. At Your Dealers or

The Globe Mills, Los Angeles

# Hooverize the Squirrel

**C**ALIFORNIA ground squirrels cost \$5,000,000 a year in damage done to growing crops according to the estimate made by observers of the University of California. In a bulletin recently issued, the following hints regarding control are given.

It is of little use to try to kill ground squirrels by strychnine-coated barley after September or by trychnine in fruit after October. From November to the end of February the best way to attack the ground squirrels is to fill their burrows with gas from carbon bisulphide, introduced by use of the "destroyer" invented by Dr. John D. Long, of the United States public health service, which pumps the vaporized carbon bisulphide into the burrow.

Poisoning works well, however, from March on until the end of September. From the time that such plants as the alfalfa begin to go to seed the squirrels fill their cheek-pouches and carry the seed into their burrows. From that time on strychnine is effective. Pour over 16 quarts of barley a mixture compounded of one ounce powdered alkaloid strychnine, one ounce baking soda, three-quarters pint of thin starch paste, made by dissolving a heaping tablespoon of dry gloss starch in a little cold water, to which is then added three-fourths of pint of boiling water; one-quarter pint heavy corn syrup, one tablespoon glycerine, and one-tenth ounce saccharine. Not more than a teaspoon of poisoned grain should be left in one place, and it should never be put where poultry can reach it. The squirrels will fill their cheek-pouches with the poisoned grain. These cheek-pouches are not lined with fur, as are those of the pocket gopher, but have thin walls which readily absorb the strychnine on the outside of poisoned grain. Squirrels are more readily poisoned through carrying poisoned grain in their cheek-pouches than through actually eating the grain, so the coated grain is better than grain soaked in a strychnine solution.

It is better to poison in the spring than in the fall, because the older squirrels have the curious habit of hibernating up, about the end of August and lying dormant in a torpid state, with respiration not perceptible, until toward the end of February. It is late in March and in early April that most young squirrels are born. A litter consists of from five to 11 young, so to poison a squirrel in March may do as much good as killing a dozen squirrels in April.

The gopher snakes, badgers, and various other natural enemies of the ground squirrel well deserve protection. They are the farmers' staunch friends. In the nest of one Golden Eagle, at Rincon, James B. Dixon found nine jack rabbits, and in the nest of another Golden Eagle at Lilac, 1 dead ground squirrels — and this without counting the squirrels already added to the two young eaglets in the nest.

One of the most discouraging features in controlling the ground squirrel, declares Mr. Dixon, is the doing nothing attitude of a few people in each locality who neglect squirrel control on their own land and allow their neighbors' farms to be restocked from their squirrel infested lands. Cooperation is essential. Mr. Dixon urges the adoption of local ordinances concerning squirrel control, and the purchase of barley and strychnine in quantities and its distribution through the farm adviser or some other local agency.

As to bounties for ground squirrels, Mr. Dixon regards that as a hopeless plan, vastly expensive and productive of endless fraud and always failing to accomplish the cleaning up of the costly and needless squirrel nuisance.

## KEEPING THE DISKS IN THE GROUND

If you will go to most any of the larger ranches in Colorado you can find from one to three disk plows tucked around in different corners, grown over by weeds and brush and out of commission just because the owners did not know how to run them. These ranches probably had some horseback farmer for straw boss and he had no doubt told them that that

plow would not work. The fact is the disks are the only plows that will turn hard dry land and cut deep. Any of them will plow if a man knows enough to hitch his team up right and then adjust the plow properly.

It is not easy always to tell how to do it because there are so many different kinds of soil, both wet and dry. They can be adjusted however to fit all conditions. The greatest fault I find with them is that they are too light in construction but this can be easily overcome by weighting them until they will stay down all the time. Then adjust the disks so they will run only the desired depth. Get the weight as near to the disk as possible. The fault most commonly found is the

disks take too much land where the ground is hard and keep pushing over until they get clear out. In this case let the furrow side down very low and raise the land side high and then regulate the depth with the back lever. If this does not work right bring in the land wheel closer to the furrow.

Still if it does not work then look over the team carefully and if you do not know how to hitch up right go and get someone who does. When a disk plow will not mark it is the driver's fault nine times out of ten and my advice is to get a new driver, but keep the plows, as they are all made to work. Half of the men who call themselves farmers do not know how to drive, but merely herd their teams and would be arrested in some countries for running loose stock on the streets. —Ira B. Cline in Field and Farm.

## A COMMUNITY CREED

The following community creed is published in this season's announcement of farmers' institutes:

- I believe in the integrity of the people.
- I believe in my home, my church, my school and my business.
- I believe in my community.
- I believe in the elevation of the moral standards of my community.
- I believe in the service of my fellow-men.
- I believe that to serve I must rise above selfishness and petty jealousies.
- I believe in cooperation for community betterment.
- I believe in the application of the Golden Rule to community affairs.

One way to increase poultry production is to banish the chicken mites from infested hen roosts.

# The Difference Shows

Let's suppose that four years ago you and your neighbor each planted an orchard—same time, same soil, same kind of trees—only one difference. You planted with Hercules Dynamite. He used a spade.

Today the difference shows. You are gathering your first crop of fine fruit. Your neighbor is still waiting for his.

# HERCULES DYNAMITE

always proves a money-maker and a time-saver for the man who uses it.

When a tree is planted in a dynamited hole it starts life with a silver spoon in its mouth. All the chances of fortune are on its side.

To begin with, instead of having to struggle for existence, forcing its tender roots through tightly packed soil, it has a chance to grow and expand in a natural way. Its energies are

not expended in an effort simply to live. This difference in its start shows throughout its life in its strength, its size, in the fine fruit it bears. The man who owns it profits accordingly. Write today for the 64 page book "Progressive Cultivation." It tells how to plant trees with Hercules Dynamite, also many other uses for dynamite on the farm. It is sent free on request. The coupon below is ready for your name and address.

A critical stage has been reached in the live stock industry and it is up everybody to do his "bit." The nation's meat requirements have never been as great and as the war progresses this demand will be augmented.

# Household Department

## OUR THANKS TO THEE

Written for California Cultivator  
By Ruth Dougherty

hills lie golden beneath the sun,  
wheat is garnered; the harvest done.  
grass seeds but wait the raindrops'  
call  
spread a fair mantle of green over all;  
For Spring is at hand  
in this lucky land,  
the heels of Autumn following fast  
bring the new 'ere the old is past.

our harvest of plenty from field and  
tree,  
the greening promise of harvest to  
be,  
our chance to help lift the burden of  
woe

the brave world struck down by  
Liberty's foe,  
For strong hearts united,  
Our Nation's faith plighted,  
all that we have, that we are and  
can be  
rough the power of Thy grace, our  
thanks to Thee.

## THE THANKSGIVING RABBIT

**W**HAT can you do with a rabbit? Exactly what you can do with a chicken—roast, pan, fry, fricassee, and a dozen ways besides. Try one of these for your Thanksgiving dinner.

### Roast Rabbit

Wash the rabbit with soda water. Lay in salted water for an hour. Stuff rabbit with onion, celery or chestnut dressing and sew up. Line a baking pan with the following: one onion, one carrot cut up, a few cloves, one peppercorn and one bay leaf. Put rabbit with salt and pepper and fat upon the dressing, putting fat over and there over the rabbit. Sift little flour over the top and pour a cup of stock or hot water into the pan. Cover tight and roast, basting frequently. When ready to serve, put on hot platter and garnish with slices of lemon and cranberry or currant jelly.

### Baked Rabbit

Wash rabbit in soda water. Disjoint hind legs; cut off the saddle; remove the forequarters, making in all five pieces. Lay in salt water about an hour. Place rabbit in dish with vinegar poured over it and let it remain over night. Remove from pickle, pat each piece lightly, and arrange in baking pan. Cut up an onion in it, adding one bay leaf, a dozen peppercorns, part of a celery root, a cup of milk, and a little vinegar from the pickle. Cover with another pan, put in a quick oven and bake an hour. Remove upper pan, and brown, basting frequently. When brown, remove and arrange pieces on a hot dish. To the pan add a tablespoon of flour browned in fat drippings and a cup of stock. If spiced enough, add pepper and a little mace. If desired, add a can of mushrooms that have been drained and washed. Pour the gravy over the rabbit, dust with chopped parsley, and send to the table.

### Chestnut Stuffing

Shell one quart of Italian chestnuts. Boil until skin is softened, then drain and remove the skins; put back in water and boil until soft and rub through a sieve while hot. Season with mashed chestnuts with one tablespoon bacon fat, one teaspoon each of salt, grated lemon rind and chopped parsley. Add three tablespoons of sifted bread crumbs and two well-beaten eggs. Be sure the stuffing is not too wet.

## THREE WORTH TRYING

### Pumpkin Pudding

Two cups stewed pumpkin, one-half cup brown sugar, one-half cup honey, maple syrup, two eggs, one tablespoon flour, one teaspoon cinnamon, one-half teaspoon nutmeg, one-eighth teaspoon cloves, one-eighth teaspoon ginger, one teaspoon vanilla, one cup of salt, two cups milk. Mix all ingredients and bake in greased pudding dish. Serve hot or cold.

### Italian Pudding

Five cups milk, one-third cup cornmeal, one-half cup honey, one teaspoon salt, one teaspoon ginger. Cook milk and meal in double boiler minutes. Add honey, salt, and ginger. Pour into buttered pudding dish and bake two hours slowly. Serve with tart jelly or preserves.

## Mock Duck

On a round steak cut thin, place a stuffing of bread crumbs well seasoned with chopped onions, butter or other fat, salt, pepper, and flavoring such as sage, celery seed, etc., if desired. Roll the steak around the stuffing and tie in several places with a string. If the steak is tough steam or stew the roll until tender before roasting in the oven.

If desired, the roll may be cooked in a casserole, in which case a cupful or more of water should be added.

## HOW TO SELECT FOOD FOR A FAMILY OF FIVE

**F**AMILY consisting of a man and a woman, who do moderately hard muscular work, and three children—say, between three and 12 years of age—would get the food they require if supplied daily with:

Four and a half pounds of bread, having about the same food value as three pounds of wheat or rye flour, oatmeal, corn meal, hominy or rice; or about 2½ pounds of such cereals and five or six medium sized potatoes.

Three-quarters cup of fat (butter or butter with oil, beef drippings, or other fat)—a weekly allowance of 2½ to three pounds.

A little more than one cup of sugar, or a weekly allowance of four pounds; or an equivalent amount of some other sweet, such as 1½ cups of syrup or honey a day, or three-quarters pound of dried figs or raisins a day.

Four pounds in all of fresh fruits and fresh or root vegetables.

One of the two following, the choice depending on the age of the children:

Three quarts of milk and one pound of other foods taken from the meat and meat-substitute group.

Two quarts of milk and 1½ pounds of other foods taken from the meat and meat-substitute group.

## Cereals Used Freely

In these combinations of food, it will be noted, bread and other preparations of cereal food are used as freely as they conveniently can be, without making the ration one sided or unattractive. A diet equal in nourishment might be planned with less cereal, but this would make it necessary to increase the amounts of more costly foods, such as meat, fruits, and vegetables.

Cereals can be used freely without making the diet monotonous if they are served in a variety of forms and combined with other nutritious or flavoring materials, such as meat, cheese, onions, celery, tomatoes, and other vegetables and dried, cooked, or fresh fruits.

## Sample Meals

The food materials indicated as being required may be combined into three meals in many ways. The following meals are given not because they are recommended above many others that might be prepared, but simply to show that such foods can be combined into dishes commonly used in American homes. These meals supply during the day all of the eight essential substances and also provide flavorings and condiments which, while not important as sources of nourishment, add to the attractiveness of certain foods.

**Breakfast—Fruit:** 1½ pounds of fresh fruit (equivalent to three medium sized oranges, five small apples, or a quart-box of strawberries), or three or four ounces of dried fruits (equivalent to 10 or 12 dates or four or five figs).

**Cereal breakfast food,** four ounces before being cooked, or about 1½ pints after it is cooked. The equivalent in food value in puffed or flaked, ready-to-eat cereals would be five or six cups.

**Milk on cereal,** one-quarter cup for each person.

**Sugar on fruit, on cereal, or in coffee,** 2½ level tablespoons or 1½ ounces.

**Bread,** eight slices, or eight ounces.

**Butter,** 1½ ounces, or 2½ cubic inches.

**An egg, or two ounces of meat, fish, or poultry for each older person, and a glass of milk for each young child.**

**Dinner—Meat, or fish, one-quarter**

pound per grown person; or, for each child, an egg or a glass of milk.

Potatoes (five medium sized), 1 1/4 pounds.

Another vegetable (turnips, spinach, corn, cauliflower, or other), one pound.

Bread, eight slices, or eight ounces.

Butter, 1 1/4 ounces, or 2 1/2 cubic inches.

Steamed apple (or other fruit) pudding. (Ingredients: Two cups flour, two tablespoons butter, three-quarters cup milk, four apples, one tablespoon sugar.)

Sauce. (Ingredients: One-half cup sugar, 1 1/2 tablespoons flour, two teaspoons butter, one-quarter cup water, flavoring.)

Supper—A gravy made out of one pint of skim milk, one-quarter cup flour, two level teaspoons butter, and four ounces salt or smoked fish (just enough for flavor). To this can be added the egg yolk left from the frosting of the cake. (See below.)

Rice, eight ounces, or one cup, measured before being cooked.

Bread, eight slices, or eight ounces.

Butter, 1 1/4 ounces, or 2 1/2 cubic inches.

One-half of a cake. (Ingredients for whole cake: One-fourth cup butter, one-half cup sugar, one egg, one-half cup milk, 1 1/2 cups flour, 2 1/2 teaspoons baking powder.) Frosting made with one egg white and one-quarter cup sugar.

### PRESSING CLOTHES AT HOME

Pressing clothes requires time, patience and some knowledge and skill. When tailors are making garments they always press them on the wrong side; but when the garments are finished, the fabric and the shape determine whether you shall press them on the right or the wrong side.

The first precaution in home pressing is to see that your ironing board or table is well and smoothly padded, preferably with a wool fabric, and that it has an outside covering of fine and even texture that will not leave its imprint on the garment.

Wool garments usually require wet pressing on the right side. Wring out a heavy cloth that you have wet thoroughly in warm water, place it on the garment, and press it with a hot iron very lightly. Do not press the cloth dry, as that may cause the garment to show the mark of the iron or may leave it shiny. The garment itself should be damp after you have finished the pressing, and should be hung carefully where it can dry without wrinkles. Always use the iron lightly; pushing or shoving it heavily stretches and cockles the material.

The shine that comes from wear and from careless pressing often can be removed, or at least materially lessened. One of the methods is the wet pressing described above; the other is the semiwet, with a dry cloth placed between the garment and the wet cloth. Steam always helps to remove the shine. An additional help is a brisk brushing of the steamed garment with a stiff brush, followed by a second wet or semiwet pressing.

Because silk scorches so easily, the safest plan is to press it very carefully on the wrong side with an iron that is slightly warm, light in weight, and preferably with no moisture. A hot iron causes it to crack and split.

Many lightweight cotton fabrics can be pressed without moisture of any kind; others require dampening. Linen requires dampening or wet pressing. If the garment is of a light color, test it with the iron in some inconspicuous spot to make sure that the pressing will not cause it to fade. Often the color will return as the fabric cools and is exposed to the light.

To press a seam, wet it slightly with a small sponge or cloth wrung out of water; a heavy fabric of course requires more moisture than a light fabric, but silk rarely needs any. Place the seam over the edge of the ironing board and press it with a hot or only warm iron, your choice depending upon the fabric. That prevents the edge of the seam from marking the garment with a perceptible ridge on the right side. Always keep the iron in motion; never let it come to rest with its full face upon the cloth. A small rolling pin or broomstick well padded or slipped under the padding of the ironing board is useful in pressing curved seams or sleeves. Only the edge of the iron should touch the edge of a corded seam.

Garment sections that contain bastings threads must be pressed very

## The Cultivator Patterns

8367—Ladies' Waist. Cut in sizes 36, 38, 40 and 42 inches bust measure. The smart feature is the Japanese collar in surplice effect.

8583—Misses' and Girls' Overalls. Cut in sizes 2, 4, 6, 8, 10, 12, 14 and 16 years. The bloomers may be long or short. The garment buttons down the front.

8376—Ladies' Dress. Cut in sizes 36, 38, 40 and 42 inches bust measure. The dress buttons down the center back and the collar is cut in the fishtail style. The skirt is gathered to the yoke.

8591—Ladies' Shirtwaist. Cut in sizes 36, 38, 40, 42 and 44 inches bust measure. The high, close-fitting military collar is the smart feature of this waist.

8581—Girls' Dress. Cut in sizes 6, 8, 10, 12 and 14 years. The surplice closing is cut very low to show the smart little set-in vest and collar. The skirt is in one piece.

8597—Ladies' Waist. Cut in sizes 34, 36, 38, 40 and 42 inches bust measure. This pattern shows one of the new close-fitting surplice waists. A side plaited pleum is attached to the waist.

7877—Ladies' Yoke Skirt. Cut in sizes 34, 36, 38, 40 and 42 inches waist measure. An under box-plait at each side gives the stylish flare.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

### HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

lightly to prevent the threads from marking the fabric. The time for the permanent pressing is after you have withdrawn the threads. All pressing should be done thoroughly and evenly; otherwise there may be a difference in shading or finish between the pressed and the unpressed portions.—Youths Companion.

### HEALTH BREADS

#### Gluten Bread

Bread made from flour from which most of the starch is eliminated is often prescribed for persons on a diet which prohibits sugar and starch. The batter should be made with gluten flour, water, yeast and salt only. Dissolve one-fourth of the yeast cake in one-fourth cup of lukewarm water and add one-half teaspoon of salt, one pint of lukewarm water and two cups of gluten flour. Beat until the batter is smooth, then begin to add flour gradually, beating and stirring all the time until you have beaten in as much as you can. The beating must be continuous, as the bread cannot be kneaded and this is the only way to make it smooth and fine grained. Let rise until light; mold carefully into loaves, adding as little flour as possible. The dough should be as soft as can be handled. Put in greased pans, let rise again and bake from 45 to 60 minutes in a moderate oven. If the bread has not the needed consistency, the white of one egg, beaten light but not stiff and dry, may be added when the batter is made.

#### Rollled Oats Bread

Two cups boiling water, 1/2 cup brown sugar, 2 teaspoons salt, 1 yeast cake, 1/4 cup lukewarm water, 1 1/2 cups rolled oats, 5 cups flour. Dissolve the yeast cake in the lukewarm water. Pour the boiling water over the rolled oats, salt, and sugar, and let stand until lukewarm; add the dissolved yeast and flour. Let rise until very light, beat thoroughly, and turn into two buttered bread pans. When the loaves have doubled their volume bake them an hour in a moderate oven.

### HEALTH ESSENTIALS

The National Council of Education through its committee on health problems has issued "Health Essentials for Rural School Children," a booklet of 24 pages all filled with a fund of information as indicated in its title, "Essentials for Health." A companion book, though much larger, is "Health Charts", a series of charts containing illustrations, diagrams, aphorisms and concisely stated conditions. We do not know any price on them and think that any teacher or one interested in rural school sanitation and health improvement should write the Committee on Health Problems of the National Education Association, 525 West 125th Street, New York City, and the booklets might be secured.

### THE TORCH

The beautiful verses under the above caption in the issue of November 10 were credited to a California paper without due credit to the author. Dr. Ford A. Carpenter, of the United States weather bureau writes: "These verses were written by Lieutenant Colonel McRae of the Canadian Expeditionary Forces and originally appeared in the Santa Fe magazine with an article by the editor."

### EXEMPTION CLAIM

One of the registrars in a Virginia country district tells a story of a negro man, obviously within the prescribed ages and of powerful physique, who turned up on registration day. The registrar had a good deal of difficulty in making the applicant understand the questions. "Do you claim exemption?" he asked.

"What's dat, sah?"  
"Is there any reason why you should not render military service—why you should not fight your country's battles?"  
"Oh, yes, sah," replied the applicant, much enlightened. "I'se gun-shy."—Richmond Times-Dispatch.

A laugh is just like sunshine,  
It freshens all the day,  
It tips the peak of life with light  
And drives the clouds away.  
—Farm Journal.

## Renew the old, worn kitchen chair

paint the soiled, marred woodwork, and give the rough, unsightly floor a clean glossy surface. That's the way to make your kitchen a 'healthful, cheerful, easier place to work. You can do it yourself—you will enjoy doing it because the result will be so satisfying. For your chairs or other furniture or your floors if you want a natural wood effect, use Sherwin-Williams

# FLOORLAC

The All Around Varnish Stain

Select a pretty shade of brown or green or mahogany and apply as you would any paint. It produces a durable, glossy surface and a rich, attractive color with one operation.

If you like a painted kitchen floor, Sherwin-Williams Inside Floor Paint will give splendid service. Water will not spot it nor will constant walking affect its

hard surface for a long, long time.

Sherwin-Williams Family Paint has a lot of inside uses—on woodwork, shelves, cupboards and all surfaces of soft wood.

There is no excuse for a cheerless, hard-to-clean, run-down home when you can get just the right finish for every surface, all ready to apply of the Sherwin-Williams dealer in town.

We have a book telling you how to paint everything on the farm that we send free on request.

For Sale

OLIVE and ALMOND

ORCHARD

Two and a Half Miles from Orland in Government Irrigation Project

On account of owner being drafted he has for sale a forty acre orchard, of which twenty acres are planted to olives and twenty acres to almonds, set out in spring of 1915. Trees are in first class condition, no better in the country. There is also on the place a new modern cottage, well, with tank, tank-house, engine and pump, and tool shed. Will sell as a whole or each twenty acres separately; we invite inquiries and will quote prices and terms on application.

HAY  
Under date of November 17, Scott Magner & Miller says:  
Receipts past week, 1009 tons. It is practically impossible to obtain any transportation at shipping points for other than government purposes, with the possible exception of a car which has brought local freight to a point and is thereby available for loading back. Figures from interior sections show plenty of hay available, and if cars were furnished there is no doubt prices would be materially less for some time at least. This will cause considerable hay to be carried over until spring or even later before it can be placed on the market and should we have seasonable rains we believe lower prices can be looked for in the spring than prevail at the present time.

The demand in San Francisco is very light and considering the car shortage it is well that this is the case. Alfalfa is in good demand.  
We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling must be added according to conditions.

Farm for Profit

and Help U. S. Win the War

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from the proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent, produce to the limit. Fertilize your land—the increase in yield and price of crops will more than pay all the fertilizer expense—it will enable you to farm with profit. Don't spend your time working worn out land. Make it pay—Fertilize with Hauser's Organic Fertilizer.

Boys! Will You Work for a \$290 Motorcycle?

We are going to give away a \$290 Thor Motorcycle, a \$125 Miami and many other valuable prizes including Cash Pay, December 31, 1917; to those who answer this advertisement and do a little work for us that will be easy to do. Eleven motorcycles have been given away that were easily and quickly secured by our easy plan. This is the easiest way to get one. You do not have to pay any money or obligate yourself to do anything. Fill in the blank below and we will write and tell you all about it.

California Cultivator,  
115-117 North Broadway, Los Angeles.

Please tell me about the \$290 Thor Motorcycle and other prizes you will give away.

My Name .....

My Address .....

# What Will She Bring?

At the Guaranty Sale, Sacramento, Dec. 5.

Korndyke Sadie Vale Star-Rena

That is indeed hard to answer, but it is not hard to figure what she should bring. Veteran breeders, including a former president of the Holstein-Friesian Association of America, have said she should bring more than any animal, male or female, ever sold in public sale in California.

Her name is KORNDYKE SADIE VALE STAR-RENA.

Her sire is King Korndyke Sadie Vale, the famous 41 lb. sire. Nuff sed.

Her dam is Korndyke Segis Star-Rena, a 26.68 lb. junior 4-year-old daughter of King Segis DeKol Korndyke, the famous 37 lb. son of King Segis and Star Rena Wayne Pietertje 2nd, a 34.35 lb. 3-year-old daughter of a 29.93 lb. cow.

Her seven nearest dams average 33.86, which average is exceeded by but one other heifer living and she her half-sister.

She is a three-quarter sister to a 40 lb. 3-year-old and the youngest 29 lb. cow of the breed.

She is a beautiful individual, you couldn't wish for a prettier one, beautifully marked and but nineteen months old.

And she is safe in calf to "It" (being bred in July), the Premier Sire of the West. Her calf will be worth more money than she will bring.

We call her the leading lady in our consignment of stars, seven wonderful females, such as but few herds in the country can boast of. Of

course you want to know about the others. Look!

WOODCROFT YBMA PIETJE at 6 years, butter 7 days 31.28, butter 30 days 124.02, and a magnificent young cow but 6 years old, bred in May to "It."

YBMA PIETJE De KOL MEAD, her nine months old daughter by King Mead of Riverside and a little gem if there ever was one.

WESTVIEW PEARLIE ALCARTRA, a 25.68 lb. junior 3-year-old granddaughter of a 33 lb. daughter of Alcarta Polkadot and bred to "It" in May.

K. S. P. GOLDEN QUEEN, a daughter of King Segis Pontiac out of a 30 lb. daughter of Lord Netherland DeKol, bred to "It."

ABBEKERK KORNDYKE SEGIS, a 30 lb. daughter of King Segis DeKol Korndyke, sire of the first 40 lb. 4-year-old, bred to "It."

QUEEN BEAUTY JULIANA, a granddaughter of Juliana DeKol, out of a nearly 28 lb. cow, safe in calf to "It."

Seven magnificent animals, six of them in calf to the Premier Sire of the West, "It," whose dam is the first 37 lb. cow, Pontiac Clothilde DeKol 2nd, and whose grandam is the famous 35 lb. cow, Pietertje Maid Ormsby.

We are loath to part with them. We can't replace them with other animals of equal merit, we know, but you can buy them at your own price—you the fortunate purchaser.

## JENNIE TERZOOOL HICKS 4th

This Great Individual and Her Son and Her Daughter Are Features of Our Exceptional Consignment of 8 Head to

## Breeders' Guaranty Sale

SACRAMENTO, DECEMBER 5

Jennie Terzool Hicks 4th has established her value by her production at the pail and her prepotency. She has a record of 600 pounds of milk and 32.7 pounds of butter in seven days and will make over 21,000 pounds of milk and about 1000 pounds of butter in 10 months. She was bred May 22 to the great producing sire King Pontiac Segis Korndyke.

Palo Terzool Korndyke, her son, was born January 19, 1917. By Rag Apple Imperial Korndyke, a son of Rag Apple Korndyke, who is the sire of the \$25,000-bull Rag Apple Korndyke 8th, the sire of the \$53,200-calf.

Alta Jennie, her daughter, was born February 18, 1916, and is a most promising heifer. In calf to King Pontiac Segis Korndyke.

### Our Other Great Individuals in the Sale Are:—

Finderne Soldene Pontiac Valdessa—A 35-pound bull of exceptional breeding born February 23, 1917. Sired by King Valdessa, the highest record bull of the breed. His dam, Finderne Soldene Hengerveld at three years made 486.6 pounds of milk and 35.33 pounds of butter in seven days, and 2,251 pounds of milk and 136.82 pounds of butter in 30 days—both world's records for heifer with first calf.

Springvale Ononis Vale—Record of 588.7 pounds of milk and 31.2 pounds of butter in seven days, and 2,461 pounds of milk and 127 pounds of butter in 30 days. Now fresh and bred to King Pontiac Segis Korndyke.

Mousie De Kol Lady 2nd—Record of 24.48 pounds of butter from 556 pounds of milk in seven days and 675 pounds of butter from 20,000 pounds of milk in 10 months. One of the most beautiful cows ever offered at any sale.

Mousie De Kol Imperial—Daughter of Mousie De Kol Lady 2nd and sired by Rag Apple Imperial Korndyke. A first class heifer in calf to King Pontiac Segis Korndyke.

Rosabel Korndyke—A great 30-pound prospect with a record of 23.18 pounds of butter in seven days. She is a wonderful producer both from the pail and the breeding standpoint.

## Arizona State Fair at Phoenix

M. E. Bemis and F. F. Stonerod Represent the Cultivator. Greatest Fair of the Southwest. Fine Exhibit from Home Canning Clubs. Demonstrations by Cow Testing Associations. Especially Strong Exhibit in Beef and Dairy Classes

HERE was nothing unlucky about the Arizona fair which closed November 17, even though it opened on the 13th. On several occasions during the week just preceding some of the other 12 fairs a rain has fallen which has materially reduced the attendance. This year not a cloud shadowed the sun and the people came by thousands, came early and stayed through the week. The attendance for the first five days was said to have been as great as the total attendance for the week of any of the previous fairs, and Saturday, the last day, was the big day, the automobile day which always draws the crowd.

Fairs are supposed to be educational, and we believe that the Arizona fair is accomplishing some things on the educational line that could not be done in any other way. I have attended seven of the 13 fairs, and it is a pleasure to me to note that the tendency is more and more towards the idea of teaching something useful to somebody. Mr. Stonerod tells you on another page of the livestock at the fair, most of which is owned and raised here. In the early days of the fair the numbers of pure bred cattle were few. It was at these early fairs, however, that the farmers learned the merits of good cattle and other livestock, and it was in no small degree the stimulus of the blue ribbons that induced many a farmer to become a breeder. The tendency is now more and more to fit the animals better and bring only the best. It is to me a healthy sign that the cattle exhibit is increasing so much in numbers and it is improving wonderfully in quality. The reason is that there are more breeders and they are bringing the best.

It was peculiarly fitting that the agricultural extension of the state college of agriculture and the several experiment stations should have exhibits and demonstrations showing

of Lowell produced on one-half of an acre of ground, vegetables which he sold for \$121. The exhibits were designed to show how more and better crops can be produced and also how they may be standardized for market or preserved for future food supply.

message from the president of the university to the secretary of the fair commission. The birds made the 110 miles in about three hours.

The demands for space in the agricultural hall were such that Superintendent Bartlett was forced to make

on alfalfa seed, first and second on paper shell pecans, first on almonds, first on Irish Cobbler potatoes, first on lettuce, first on Early Baart and Macaroni wheat and threshed milo.

Maricopa County's exhibit was given a touch of reality by a scene representing the Roosevelt dam with the water flowing from the outlet. As the agricultural and livestock products of this county are dependent upon the water from this dam, it was particularly fitting that it should have a place in the exhibit, and an interested crowd was always viewing this scene. Among the many ribbons won by Maricopa County was first and second for alfalfa cow hay, first for threshed barley, red oats and club cane, first for best 50 bolls of cotton, also for best ten pounds of lint and ten pounds of seed cotton; in vegetables first on red sweet potatoes, bunch turnips, bunch radishes, cabbage, table beets, parsley, table onions, green peas, and cantaloupes; in fruits first on Delicious apples, persimmons, pomegranates and several varieties of grapes, and best display of grapes by one grower. Maricopa won first on head milo and second on ear display of Mexican June corn and also second on all other varieties of Dent corn.

Pinal County received the honor of first prize for baled long staple cotton, yellow sweet potatoes and egg plants, and tomatoes and watermelons all won first prizes from this county as well as a number of second prizes.

Pima County had a booth representing the entrance to the famous St. Xavier Mission of Tucson. Not a large exhibit was shown but several first prizes were won including first on Mexican June corn.

Gila County for the first time had a place in the agricultural hall. Here some of the products from the famous war gardens of Inspiration were shown. Owing to an error in making the entries many products shown were cut out of prizes, which other-

Arizona Grand Champion

A California horse winning honors at the Arizona State Fair. Grand champion Percheron stallion exhibited by Ruby & Bowers.

Cooking demonstrations were given daily, and on the last day an Arizona luncheon was served, everything on the menu being an Arizona product.

The exhibit of the state game warden was more than educational; it was fascinating. Not only were many wild animals shown in cages, but there were also specimens of birds and animals that had been preserved by the taxidermist's art which, properly labeled, were a revelation to school children as well as many older ones, of the wonders of nature in this

some changes in the building to accommodate the needs of the various counties. In the grand prize of the counties, Maricopa not competing, the silver cup for best display was won for the first time by Yuma County. Yavapai was second, Coconino third and Pinal fourth. Yavapai was conceded to have the best decorated booth. Navajo County, one of the northern counties, won a first prize on King David and Wealthy apples; in dry farm products, a first on hard wheat, ten ears of sweet corn, sheaf

Cow Testing Associations Honored

Cow testing was given recognition at the Arizona State Fair, and methods of conducting a test were shown.

Methods of producing and preserving foods. In the division representing boys and girls club work one of the most striking exhibits was that of the Opal Webb, a 14 year old girl of Pima, who had on exhibit 211 varieties of canned fruit, vegetables and meats. This girl will stand a good chance of winning the national championship in the girl's canning clubs. No other girls had 99 and 100 varieties respectively. Floyd Medlock of Tempe is the winner of the national boy's championship in cotton raising, having produced 310½ pounds of lint on one-half acre. Another boy, Joseph Carbine of Jerome Junction, had 64 sacks of potatoes on one-half acre of ground. Harry Miller

big state. In this same class was the apary exhibit which this year was superintended by Dr. Morrill, the state entomologist. By placard and verbal explanation thousands of people learned something about these wonderful insects that in Arizona are producing more than 20 carloads of honey each year.

The poultry exhibit was not as large as in some former exhibits but in quality there was nothing lacking. The varieties represented nearly all the popular breeds. Judge Goodacre of California again placed the ribbons to the satisfaction of the exhibitors. Two pairs of Homer pigeons were shown that were released at Tucson the day before the fair, bringing a

of soft wheat, ten ears of flint corn, and peck of soft wheat, and a second on ten ears of popcorn. This county also won several other first and second prizes in fruit and dry farm products.

Graham County vies with Yavapai for honors in raising apples; the prize for the best six boxes of commercial pack of foremost commercial varieties was won by this county this year. Five first and second prizes were awarded on different varieties of apples. The second best five heads of dry farm milo was also credited to this county. First for best bale of wheat and best bale of alfalfa horse hay was won by Graham County.

Yuma County won first and second

wise undoubtedly would have won first honors. The exhibit was very creditable.

Coconino County carried off nearly all the prizes for potatoes and made a good showing of other products.

Cochise had a very attractive display of fruits, grains and vegetables, both dry farmed and irrigated, and carried off more than 20 blue ribbons as well as many more seconds.

Apache and Santa Cruz Counties, one from the extreme north and the other from the southern border, had booths side by side, and both made characteristic exhibits of the products of their respective counties, and

Mines Building at Arizona State Fair

Substantially built and indicates belief in the permanence of the mining industry near the head of which Arizona stands.

# Plant Fruit Trees this Year

If you are going to plant trees this year, you will quite naturally want to buy the cleanest, healthiest, best rooted, most vigorous stock obtainable. Hundreds and hundreds of fruit growers who have made a big success in this state and "who know," will send their orders to the Fresno Nursery Company.

## Come To Headquarters

There is a reason why Fresno is a fruit tree center—climate, soil and abundance of water for irrigation purposes make this a wonderfully fertile section.

As we specialize in fruit bearing trees, we are in a better position, perhaps, than anyone else to take care of your requirements along this line. We would be glad to have intending planters write to us regarding the number and variety of trees they will probably want.

## The Muir Peach is in Great Demand

Growers throughout the San Joaquin Valley secured large returns from their Muir Peaches this year.

The California Peach Association strongly favors the Muir Peach, as they have found it the only variety that can be process peeled. We can say that if you have soil suitable for growing peaches, you will make no mistake in planting Muirs. We have an exceptionally fine stock of young, thrifty trees this year.

## Notice To Planters

We want every horticulturist in this state to have a copy of our new catalogue, just off the press. This book will contain more complete detailed information about the different varieties of fruit bearing trees than is usually found in a Nursery catalogue.

## Humus

**A** FUND of valuable information as to fertilizers for citrus trees is gathered in Circular 171 by Dr. W. P. Kelley of the Riverside Citrus Experiment Station. Regarding the importance of humus Dr. Kelley says:

The most important consideration in the fertilization of citrus is California relates to the organic matter of the soil. The virgin soils are commonly low in organic matter and the tendency is ever toward the loss of this constituent. The forces which bring about decomposition of soil organic matter are stimulated by the more favorable conditions which ensue as a result of cultivation and irrigation; the temperature and moisture conditions are suitable for rapid decomposition throughout the main part of the year. Consequently, it is necessary to put forth special effort, if the organic matter be maintained.

Suitable physical conditions in soils are of great importance, without which no amount of fertilizer or other soil treatment can be expected to produce maximum effects. But the maintenance of suitable physical conditions in a soil is more dependent on the presence of decaying organic matter than on any other factor. Likewise favorable chemical and active biological conditions in soils are vitally dependent on the presence of organic matter. In fact, organic matter is the life of a soil.

As a means of supplying organic matter, leguminous cover crops are recommended. It is well known that legumes have the power of fixing nitrogen from the air and thus adding it to the soil, but it is doubtful whether the value of a cover crop can be adequately estimated by its nitrogen content. The effects of decaying organic matter on the soil itself are probably of as much importance as the actual nitrogen added from the air. Leguminous cover crops undergo rapid decomposition, leaving the soil in a physical and chemical condition that is better suited to plant life. In order to avoid bad soil conditions that may otherwise arise, it is recommended that, wherever possible, the cover crop be incorporated with the soil not later than the middle of March.

A second important means of replenishing the organic supply of soil is by the use of manure, and almost every orchardist, whether he be a citrus, walnut, or deciduous fruit grower, should put forth increased effort to enlarge and conserve his supply of manure.

In general the greatest value to the soil will result from plowing down the manure as soon as possible after it is applied, but no hard and fast rules be laid down regarding the time of application or the amount to be applied. As a general rule, better soil conditions result from making the application early than late in the season, and the amount available together with its cost will rarely permit the grower to use an excess. Ten cubic feet per tree may be considered to be a reasonable application.

Manures differ widely both in composition and in their effect on soil. The rates of decomposition likewise differ widely. Generally speaking, the more straw, sawdust, shaving, etc., a manure contains, the more slowly it will undergo decomposition, and just as in the case of covercrops, manures cannot be adequately valued by their plant food content. The nitrogen content of manure gives to special value for California soils, but too much stress should not be placed on the analysis of manures, for it is beyond doubt that the effects produced by this material are often not proportionate to the plant food content. The soils need to be enlivened with decaying organic matter, and manure is a valuable material for this purpose.

Another important source of organic matter is found in bean straw and alfalfa hay, but in view of the value and need of these materials as stock feed at the present time, the citrus grower is advised to make use of winter cover crops and manures instead. However, bean straw and alfalfa hay are valuable materials for use on citrus soils. The high nitrogen content makes it possible to supply a liberal amount of this element along with the organic matter, and the fact that these materials undergo rapid decomposition, insures rapid nitrification and therefore prompt availability.

## Fertilize

With the present high prices it is going to prove highly profitable to use fertilizers liberally this year. Moreover to fertilize so that every acre shall produce more than in the past is highly patriotic since it helps to feed the nation and its Allies. Such is the point of view urged by the state council of defense.

More nitrogen and more organic matter in the soil is the foremost problem of the California farmer, says Prof. C. B. Lipman in a paper on "Fertilizing California Soils for the 1918 Crop," just issued by the state university.

Here are the best ways to increase organic matter: The use of all available farm manure. The use in orchards and vineyards in the fall, and on summer fallowed grain land during the fallow year, of all available straw. The use of green manuring crops, preferably leguminous crops grown through the winter and spring and plowed under about April 1. The best

are melilotus indica, vetch, and clover. The plowing under of weed beet tops, and prunings from trees and vines, especially in the fall of the year. The use of straw mulch to prevent excessive oxidation of the organic matter which results from cultivation, and to bring organic matter into the soil. The best mulches are legume straws like bean straw or coarse alfalfa hay, but grain straw, rice hulls or farm manure may be used.

With the possible exception of the delta lands, potash fertilizer cannot be made to return profitable yields on arid California soils. Considering war needs and war costs potash fertilizers should not be employed during the war on California soils, save the on the delta lands or on some of the badly leached soils of certain portions of northern and northwestern California, where there is very heavy rainfall every year, potash fertilizer may be used to advantage if a cheap form like wood ashes is obtainable.

## Cooperating

Personal independence is a fine thing as long as it is intelligent. Lacking intelligence, it becomes the characteristic quality of the mule. Men who are masters of their own affairs are more interested in doing the right thing than in doing the independent thing. The man who says this week that he will eat what he pleases and would like to see anyone make him sign the food pledge, is doing more than his share to make sure that no food pledges will be necessary next week to force a limited diet. Usually he does not have any notion of where he gets his food beyond the fact that he buys it and now has the price. If he should still have the price, but not

be able to buy the food, next week, he will be still indignant, but entirely helpless.

We must expect to find people like this, who refuse to sign food pledges but we should not be discouraged. It is all a matter of education. We have all had to be educated on all sorts of public subjects. Some of us have never learned anything except through necessity. We have supported schools, not because we knew schools were good for our communities, but to save our property from being sold for taxes. Many others of us have had to support roads and parks and other public enterprises in the same way. But the great mass of people

ple do public things in a public way and do not think they are giving up their independence in cooperating.—Fresno Republican.

### KEEP THE TRACTOR IN GOOD ORDER

The tractor is as responsive to good treatment as an animal or any other machine. In the case of a great many machines the response to good treatment is not so noticeable. This is true because the tractor is a power-furnishing machine while the average farm machine consumes power. If the tractor is not just right in every way, it falls short in the production of power. This is sure to be very noticeable, as it is usually pulling a full load and only a small loss in power cuts down the amount of work done.

In the case of the power-driven machine, any disorder calls for greater power to operate it. The horses or the machine furnishing the power work harder and approximately the same results are accomplished. Hence it is much easier to overlook a slight indisposition on the part of a power consuming machine than on the part of the power producer.

If any part through which power is transmitted is loose, it may cause a reduction of power. The tractor operator should examine his machine thoroughly every week or ten days to prevent such loss. A bolt in the crank case is loose, oil is lost. The adjustment on a valve stem loosens, the valve is out of proper time and the cylinder does not give full power. The clutch is not adjusted to take hold evenly. Slippage here causes loss of power. Similar leaks may develop in the fuel system and the ignition system. Any of these cause heavy drains on the power. Usually they can be quickly repaired if attended to early. Left too long, they may result in a breakdown involving a large repair bill and loss of much valuable time.

The throb and rhythm of the tractor should be a part of the operator so that he detects the trouble in its earliest stage.—E. R. Gross, Colorado Agricultural College.

### HOW TO MAKE ELECTRICITY

How to make your own electricity is the subject of a university extension correspondence course offered by the state university at Berkeley. In this course an electrical engineer will teach how to harness the creek or, cheaper yet, put a gasoline engine to work making electricity, and how by the use of an economical equipment of storage batteries this stored power may be made instantly available at any time, not only, for lighting, but for sawing wood, pumping water, running a vacuum cleaner or the electric iron, or churning, or operating a washing-machine. The farmer who can obtain power from neighboring power lines can learn in this course how to wire his house and barns, how most economically and efficiently to use this supply of electricity, and how to make simple calculations in electricity as he now does in regard to steam engines or gas engines.

Book Review

### COOPERATIVE MARKETING

"Cooperative Marketing, its Advantages as Exemplified in California Fruit Growers' Exchange" by W. W. Cumberland, University of Minnesota. Princeton University Press, Princeton, New Jersey, publishers. Price, net \$1.50.

Mr. Cumberland is a California boy, born and brought up in the orange groves of eastern Los Angeles County, so that he is interested in the citrus industry. The book touches upon distribution; origin of citrus industry in California; beginnings of cooperative marketing among citrus growers; constitution and details of the exchange; benefits of cooperation, and one chapter is devoted to affiliated cooperative organizations. There are an even dozen chapters, 226 pages, egg shell paper, uncut edges and a generally attractive book.

### IRRIGATION CONVENIENCE

Henry Pitcher, an Orange County irrigator, has invented and secured patent on a combined ridger and blocker for preparing ground where the basin system of irrigation is followed. It may be handled with either team or tractor.

## TEAGUE QUALITY CITRUS TREES

AWARDED THE GOLD MEDAL AT FOUR INTERNATIONAL EXPOSITIONS.

For Productive values, fine quality of fruit and vigorous growth Teague's bud-selected, (pedigreed) properly trained and carefully handled orange and lemon, pomelo and lime trees are the trees to plant. An experience covering a third of a century warrants the assertion that Teague Quality Citrus Trees possess these qualifications in a superlative degree. All the standard commercial sorts, and garden and ornamental varieties; the largest assortment of citrus trees in America. . . . We invite correspondence from intending planters. . . . Consultations on citrus planting by appointment. 1918 Price list just out; send for a copy.

## The California Fruit Growers Fiftieth Convention

Fruit Growers of State Gather at Sacramento. They are given a royal good time by the Sacramento Chamber of Commerce. Three days devoted to discussion of Standardization, Labor, Marketing and other Problems. Next Convention to Be held at Riverside.

**S**ROBLEMS brought up by the world war dominated the fiftieth state fruit growers' convention held last week in the city of Sacramento. Most important of these problems were perhaps brought out in the discussion of closer cooperation of labor to save wasting crops and the closing of saloons which lower labor's efficiency. On this point a resolution was introduced in effect that the governor call an extra session of the legislature to deal with "predatory saloons which waste the earnings of workers and lower the efficiency of labor at least 25 per cent." Another resolution called upon Commissioner Hecke to inaugurate a state wide campaign of one week, not later than April, 1918, for the extermination of the California ground squirrel. The resolution also urged upon the board of supervisors of the counties to appropriate funds for the use of the county horticultural commissioners to make this work effective.

In labor serious shortage was shown. In certain sections like Fresno, or in limited areas, thorough organization of the fruit growers and payment of a liberal wage has lessened the loss. Had all sections made an equal bid for these laborers the losses would have been more evenly distributed and the situation complicated. It was suggested that Chinese laborers be admitted, that laborers be secured from the Hawaiian Islands and from the West Indies. In the building of the Panama Canal, West Indian laborers were used and found efficient. It was stated that at least 15,000 unskilled laborers would be needed to harvest the crops of 1918. One point in favor of the West Indian laborers was better facilities for bringing them into California. The strongest objection put up against Chinese labor was the practical impossibility of securing transports to carry them to this country.

It has been most fortunate that the weather conditions and the harvest season have enabled prolonged harvesting, else California's loss would have been immense. The labor question was finally referred to Commissioner Hecke with the request to "use his best endeavors to bring about the material alleviation of the present shortage of labor and take up the subject with proper government authorities." A committee will be appointed by the state commissioner to present the matter to Washington. One entire day was given to the discussion of labor problems.

### Plant Trees

One speaker made a suggestion that in the matter of orchard planting with the present car shortage and transportation difficulties "the problem was so great that planting should

be discontinued." This was contrary to the belief of many of those attending the convention, for it was felt that the same determination with which this country is entering into the element of the war questions would meet the requirements of transporting California's fruits. It takes years to produce an orchard, and it is more than likely that America will meet increased production with increased facilities. Regarding the statement which had been made that California fruit shipments during 1918 must be curtailed at least 50 per cent, it was asserted that while all the conditions of transportation could not be positively predicted it was reasonably sure that no such serious shortage would be felt. Many cars which have been used in transporting lumber and materials for building in cantonments would now be released. The transportation problem for the next few months will be one more largely of movement of men and food supplies. California sent during last year over 23,000 carloads of fresh deciduous fruits to Eastern markets. This was vastly greater than any other preceding year. The construction of buildings in the cantonments has taken 50,000 carloads of lumber and 86,000 carloads of plumbing materials. Next year's output of deciduous fruits will not be so great. Next year's output of citrus fruits will also be materially below that of this year, when 54,504 cars were required to carry fruit to the market.

### Deciduous Experiment Station

The deciduous growers of the northern part of the state presented the matter of an experiment station having to do with deciduous fruits as does the citrus experiment station at Riverside with citrus fruits. There is now an experiment plot on the farm at Davis, but the growers have felt that this was not of sufficient scope to give the information which is required by those engaged in an industry so extensive as that of growing deciduous fruits in California.

### Cooperative Marketing

Cooperative marketing was handled by the state market director and by representatives of every form of cooperative effort in this state. It was urged that a more perfect coordination of present cooperative effort be effected. As the cooperative association aids the growers, so should the larger organization aid the different associations.

### At Riverside

The fifty-first state fruit growers convention will be held in Riverside and while no date was named, it is presumed that this will be a fall meeting, hence in November or December of 1918.

## To the Citizens of California:

Coal is absolutely necessary to the successful prosecution of the war; every available pound can and must be put to use by ourselves and our Allies. It is the patriotic duty of every citizen to avoid waste of coal and to consider how his coal requirements can be reduced.

California, in particular, is confronted by a most critical situation. Eighty per cent of California's coal supply comes from Utah and Wyoming, a distance of at least 1000 miles. Our railroads are now burdened to the limit of their capacity moving troops, supplies, munitions and other things essential to warfare; and still with these tremendous limitations upon our transportation facilities comes the greatest demand for coal ever known in the history of our country. Under these circumstances every California coal user must help.

### We ask all:

Not to use coal for heating unless the house temperature is below 60 degrees.

To burn wood wherever possible.

To use oil stoves or heaters when it is necessary to keep certain parts of the house at a special temperature.

To reduce the coal used in the stoves. Do your cooking at one time. Use wood wherever possible.

To be economical with gas and with electricity where it is generated by coal or oil using plants.

Not to burn coal in an open grate, for in such practice 75 per cent of more of the heat goes up the chimney.

Not to heat every room. Close off spare rooms. Most people would be healthier if they slept in cold bedrooms.

The times call for more than usual skill and care in putting coal into stoves and furnaces.—Federal Fuel Administration for California.

Owners of land in Los Angeles and Orange Counties are planning a large drainage district which will reclaim hundreds of acres.

## "MACHINES MUST TAKE THE PLACE OF MEN"

Let the "Alpha" Do Your Work

**Cut Feed  
Saw Wood  
Pump Water  
Run Separator  
Churn or Washing Machine  
Operating Power  
Sprayer**

**A**N ALPHA ENGINE is almost indispensable on the farm these days when labor is so hard to get. It's so reliable, too. Always on the job. Never quits. Never gets laid up. You can always depend on an "Alpha."

Thousands of engine owners swear by the Alpha because they have found that it is reliable at all times and under all conditions. It is sturdily built. It is simple in construction. It is powerful. It runs on either gasoline or distillate and develops its full rated horse power on a minimum of either. If you want an engine that you will be thoroughly satisfied with, put your money into an ALPHA.

## Queries

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

### Pie Melons for Poultry

Please tell me why my hens have stopped laying all at once. We feed them green alfalfa, bran and rolled barley. They have grit, a fine yard, and we let them out for a run every evening. We also give them ripe citron, or pie melon, letting them eat the seeds. Their combs are red, feathers fine, and they have pure water by them all the while. We keep no rooster with them. They are not crowded, and have good nests to lay in. I am told it is the melon seed we have to blame for it. What do you say?—Subscriber, San Jacinto.

I don't believe it is the pie melons that have checked your hens' laying. If you have allowed them to stuff themselves with the seeds to the exclusion of other and more nourishing food, the effect might be disastrous, but melons in moderation should not affect laying. More likely it is lack of animal food. You are feeding no beef scrap or fish meal or milk, and the bugs and worms which they may have found earlier in the season on their range are not so numerous. Better add about 20 per cent of some animal meal to your bran. It would be better, too, not to use all bran for your round grain, but to add one part midlings or oat chop for every two parts bran. A little linseed or soy bean meal could also be added, along with the scrap or meal. You do not say whether the hens are through the molt or not, but it often happens that a hen that has laid up to the time when the new feathers begin to grow stops laying then because all the protein in her ration must be used for making feathers. If more protein in the shape of one of the vegetable meals or sunflower seed or an occasional meal of green cut bone is added to the ration at this time, she will soon finish the feather-growing and get back into laying form again.—J. A. K.

### Water Sprouts

What causes the growth of sprouts from the roots of apple trees and how could one control them?—Subscriber, Reshwater.

If from the roots, these are usually caused by breaking off in plowing or cultivating, of the larger roots, and from these suckers will sometimes start some distance up the tree. More often they come up around the crown of the tree and prove to be robbers of the sap and possibly the life of the tree, and to prevent loss they should be removed with a sharp knife as fast as they appear. If kept off for a long time, this habit disappears.

### Weeds in Reservoir

Weeds of various kinds are growing in my reservoir. It is my intention to either cement or asphalt the reservoir, but before doing so I would like to know what to put on the ground to kill the growth of the weeds.—Subscriber, San Gabriel.

In case cement is used we think there will be no necessity of treatment of the weeds, but in case asphaltum is used we think that treatment with distillate on a good hot day before applying the heavier oils would be sufficient. We would be glad to hear from any subscriber having had experience along this line.

It was announced that this government was withholding supplies from Russia, but the war department asserts that this is not the case. Apparently the war department deems Russia's position worth supporting.

## FARM LOANS GROWING

Farmers of the United States have already secured over \$21,000,000 of five per cent money through the farm loan board. October was the biggest month in which over \$7,000,000 was paid out. Some states have applied for almost as much as the total loans yet made. These are being handled as rapidly as possible.

During October the 12 federal land banks received applications for loans amounting to \$27,416,463, and approved loans amounting to \$20,119,240. This brings the total applications for loans in the hands of the 12 federal land banks up to a grand total of \$193,250,945. This represents the applications only of organized farm loan associations, totaling approximately 3000, one-half of which have actually been chartered and the other half of which awaits action by the federal land banks. In addition the federal land banks estimate that there are approximately 2000 other farm loan associations being organized in the United States, which, when their applications are filed, will bring the grand total of applications to nearly double the present amount.

The most liberal in asking for these loans is Texas. She has applied for \$19,167,223, but thus far has only been granted \$729,000. California stands next in number of applications. Farmers of this state have asked for \$14,887,389, and loans actually placed aggregate somewhat less than one million dollars. This is within the boundaries of this state. The Berkeley federal land bank however, has closed loans for about a million and a quarter dollars. Considering the upheaval in the management of the Berkeley institution we think some exceptionally effective work has been done.

Every ball of the YUBA TREAD kept at work at food production helps as much as a hundred balls flung into German trenches.

## ORCHARD INSURANCE

Using a Bean Power Sprayer to keep your trees clean is just like taking out insurance on your orchard. With the Bean you will get results without trouble or needless delays, and big crops of healthy fruit will be the ultimate result. No orchardist ever made any money by experimenting with sprayers, so don't buy another make and then discover when it is too late, that what you really need is a

## Bean POWER SPRAYER

The 10-point sprayer

There are 10 big distinctive features that account for Bean superiority. Chief among them are THE BEAN PRESSURE REGULATOR, which keeps the pressure uniform at any desired point and permits the REMOVAL OF THREADLESS BALL VALVES IN TWO MINUTES, with full pressure going continuously—Eccentrics instead of cranks—Porcelain-lined cylinders—Elimination of stuffing-boxes.

### THE BEAN GETS RESULTS

Bean Power Sprayers have led for 34 years because nothing has been overlooked that might add to the completeness, sturdiness and downright serviceability of the Bean.

Learn all about this sprayer before you buy any other kind. Compare them point by point with the Bean. There is no other just like it—no other does all that it does. The Bean has been the overwhelming choice of fruit growers for years. Send in the coupon for the free sprayer book—and describe your spraying needs.

## Heavy Double Tractor Discs

**KILLEFER QUALITY**

**KILLEFER EFFICIENCY**

Our Engine Discs are built in sizes from five to twelve feet in width. The Discs are made extra heavy for this class of work and are stronger than anything obtainable on the market. The arbor bolts are large and all castings are made heavier in proportion to stand the extreme strain required of the Tractor Tools. The discs are equipped with weight boxes to give the necessary weight to insure the proper penetration on different character of soil. The pitch of the disc is controlled by connecting arms bolted solidly in place, but which can be changed to any pitch desired within a radius of fifteen degrees.

## Wade's Drag Saw More Than Pays for Itself in One Season

### -saws 25 cords in a day

Big Profits.  
Small  
Expense.  
LITTLE  
WORK.  
The Wade  
Is the Big-  
gest Labor  
Saver Ever  
Invented.

**\$165**

This little saw is revolutionizing wood cutting! Hundreds of farmers are cutting 25, 30 and even 40 cords of wood in a single day—men who used to spend 10 to 12 back-breaking hours to cut three or four cords. Just think—the WADE cuts a 46-inch log in five minutes.

### 1918 MODEL—4-H. P. ENGINE

The new WADE is equipped with our powerful little 4-H. P. Engine, besides SEVEN other big outstanding features that make many users like G. H. Northrup, of Clearwater, Wash., say, "...and I would not take twice what I paid for it—" Simplicity and efficiency is the keynote of the 1918 WADE.

## The Vegetable Garden in December in Southern California

Written for California Cultivator By D. F. Reichard

**T**HE lateness of the rains this year makes it necessary for those who can plant early winter stuff, to irrigate so as to get their ground in condition for planting.

Clear the garden of all crops that have matured. Prune all deciduous trees and shrubs. Burn or compost all the rubbish, spray all green stuff that may have aphids with Black Leaf 40. Destroying aphids at this time will materially reduce the possibility of having so many next season.

A generous amount of animal fertilizer should be worked into the soil at this time so that it may be decaying to make available plant food for early spring.

Having gotten the land apportioned for garden selected and cleared of the old crops, cover it with a good dressing of manure, after which thoroughly soak it so that the moisture gets down at least eighteen inches. As soon as the soil is in proper condition—in from one to five days, according to its nature—work the ground well to a depth of ten inches or a foot and thoroughly pulverize. This puts it in condition for the reception of seeds or plants.

Although December is not a good month, on account of its long cool nights and its short indifferent days, for seed planting in general, there are conditions and locations where many

varieties of vegetables may be planted with almost certain success. Hardy varieties may be planted in light warm soils. Among these would be Egyptian beets, Swiss chard, purple top turnips, Los Angeles Market lettuce, early radishes, prickly spinach, kale in variety and mustard. The seeds of all these will germinate and the plants will make slow growth until the early warm days come in February, by which time these young plants are well established and are in a condition to make quick growth at this first invitation of spring. In frostless foothill spots more tender things can be put out, such as potatoes, early tomatoes and peppers. Dormant plants of asparagus, rhubarb and horseradish and onion and garlic sets may be set out; also young plants of cabbage, cauliflower, kale and lettuce. None of these will make much top growth until they get some warmer weather but the roots will be getting well established.

Wet all plants well at once after planting to settle the dirt around their roots. Since the soil stays moist as well this cool weather seeds planted an inch in damp soil should not need wetting until after they are up, at which time run a furrow beside each row and irrigate by allowing the water to run slowly down each furrow. Cultivate as soon as soil is in condition.

## Southern California Cauliflower Crop

By R. G. Risser, Assistant Truck Crop Specialist

**N**OVEMBER 1, 1917.—Personal inspection of cauliflower in the fields and interviews with growers indicate that the condition is 90 per cent of the condition one year ago and 85 per cent of normal. October, 1917, was one of four Octobers in 40 years to have no rainfall. Hot drying winds have also occurred which have had a perceptible effect upon the growing cauliflower, and while sufficient water has been supplied for irrigation, the cauliflower crop is especially sensitive to atmospheric conditions and needs more favorable growing weather. The full extent of injury from the dry sunny fall of this year is not yet apparent and to the casual observer no damage is noticeable, but growers of long experience declare that the foliage does not look right, and if the present conditions continue much longer the crop may be materially affected. No serious consequences are expected, however, if the month of November is normal.

Extra early cauliflower has been moving out in mixed cars during October and several straight cars have been shipped, but the bulk of the crop has not yet made heads. About 95 per cent of the plants to be set out are now in the field, but, in general, the crop is later than last year. Planting of the seed beds started early in May and continued at intervals of two weeks into the month of August. Early, half early, and late varieties are generally used and with successive plantings they provide a con-

tinuous supply for heavy daily shipments over a long winter period. Broccoli is also grown to some extent and proves superior for late planting in especially cold seasons. The seed is produced by the growers of cauliflower, and strains well adapted to local conditions have been developed by years of selection.

Some of the growers planted a larger acreage of cauliflower than they intended at the outset to put in, and some of them were so short of labor during the beet harvest that they did not get their full acreage set out, but all information available to date confirms the preliminary estimate of 3500 acres in Los Angeles County. This acreage, together with a normal yield of 400 crates per acre, gives this district the distinction of being one of the few great cauliflower sections of the United States, and if the season from now on is favorable it is doubtful whether any district in the country will ship out a larger number of cars.

On account of a very short crop of navel oranges, it is expected that there will be more cars available for vegetable shipments than there would be otherwise. The present shortage of cars is a serious thing and until bad weather occurs to cut off grape shipments no improvement in the supply of refrigerator cars is in sight.

Labor shortage, which has also caused grave concern and heavy losses this season, is not expected to be at all acute during the winter months when cauliflower is moving.

## The Ornamental Garden in December in Southern California

Written for California Cultivator

**B**ERMUDA grass lawns are browning, which is not in the least attractive, and if they are given an application of nitrate of soda and thorough raking encouragement will be given to the blue grass which may remain to send up fresh shoots, for these are not affected by the cold as is the Bermuda. Besides the thorough raking and fertilizing gives the Bermuda a chance to brighten itself up.

It is a little late, but seeding of clover may continue, but one takes risk of damage from early frosts.

Autumn leaves are falling and be-

coming something of a nuisance. Don't burn them. Push them into a pile in an out-of-the-way corner and mix with weeds, rubbish and manure. Keep it wet, and within a year fine potting and garden soil will result. Or, in lieu of the compost heap, one may spade leaves into the garden and give thorough wetting, and by spring they will not seriously interfere and ultimately will provide a fine addition to the garden soil. In fact, a heavy manuring of the soil in addition to this spading of the leaves, and manure spaded in, is excellent treatment at this period of the year.

Tickner & Co., 260 E. Morrison St., Portland, Ore.  
E. F. Mesbyshell Co., 125 N. Los Angeles St., Los Angeles, Cal.

When writing advertisers, mention The Cultivator.

Plant sweet peas, and practically all rden annuals of the hardier sorts. pecially put in some of the phlox d other "old fashioned" plants. th the planting, don't forget the lifornia poppy. Take out the dor- unt dahlia bulbs and put in more of ese hardy annuals. Store the dah- bulbs in cellar or other cool, dry ice. If daffodils have not been planted tensively, plant at once; also ane- ones, ranunculus, hyacinths, tulips, anish iris, sparaxis and freesias.

Alfalfa Molasses

Regarding alfalfa molasses about ich the Cultivator recently asked, requested of Professor F. W.Woll ormination regarding same and he ites: Alfalfa molasses is simply chop- d alfalfa, to which a certain per- tage of molasses has been added, linarily 25 to 30 per cent, I believe. number of firms in this and other estern states manufacture and sell ch feeds under certain trade names. sold at a reasonable price, say at out that of wheat bran, these feeds e worth a trial, but should be bought

The breaking up and replanting of the different types of the German iris is also in order now. Roses and practically all deciduous shrubs may be safely moved during this month. Chrysanthemums may be taken up and the ground given to more attractive winter blooming plants. They should be heeled in and the shoots taken from them for new plants next spring. The heavy prun- ing of the year may be given to prac- tically all roses and other shrubs.

of well known reputable firms only, as there is always a temptation to use inferior grades of alfalfa in their manufacture, which come nearer to alfalfa straw than alfalfa hay in composition and feeding value. Molasses is a valuable stock feed, whether from cane or beet sugar factories, although the former kind is generally preferred by manufacturers and stockmen. A ton of molasses has a feeding value nearly equal to that of a ton of grain, and in addition adds considerably to the palatability of the feed or feeds with which it is mixed."

Halting Road Construction

Road builders are seriously concern- over the order of the Council of tional Defense to the effect that en top freight cars, except flat cars, ay not be used for shipping supplies r the construction, maintenance or pair of highways, roads, streets, ewalks, etc. The same order af- cts supplies for construction of all eaters or other buildings used for usement purposes. Highway com- missions and all who are interested in eing America's ability to defend rself because of a perfect system of ads are seriously concerned over ls order. We think however they e mistaken in believing that be- use some of the members of the uncil who are responsible for the ler are largely interested in rail- ways, that is the cause of the order

which will cripple highway building. As a matter of fact, highways from farming to railway centers may mater- ially increase railroad traffic. This is the time of war and non essentials must give way. However, we do agree with the road builders that road build- ing is one of the essentials which should be maintained at this time and we hope the priority board of the council will see fit to modify the rul- ing which has been given. In portions of California various scenic highways, more for the benefit of our pleasure seekers and tourists, have been planned. True patriotism calls for discontinuance of any such work, but construction on such high- ways as lead between the larger centers and through farming sections should be continued as a war meas- ure.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox ilding, Los Angeles, will answer legal irding in this department. Immediate mail replies cannot be given cept where fee to Mr. Stanton is paid. hen replies are wished in Cultivator dress query to 115½ N. Broadway, Los geles.

Division of Property

A buys an undivided one-half inter- t in 160 acres of land. A wishes to vide, hold, and improve his half, but the other owner, insists upon a aking a give or take offer for the hole. Can B compel A to make a ve or take offer?—Subscriber. An action may be commenced by A the superior court of the county thin which the real property is situ- ed to have a partition decreed. If it ppear that a partition of the lands mong the respective owners cannot e made without great prejudice to e owners, the court may order the hole lands sold and decree the pro- portion of the monies resulting there- om; otherwise referees are appoint- l who view the land, make their re- port and set aside the lands among e respective owners, which report is onfirmed or set aside and the judg- ent of the court, decreeing the divis- ion and settling the lands in fee sim- e among the owners.

tax on Homestead

Can one holding down a homestead this state be assessed and taxed r county taxes either on the land or e improvements before receiving a tent for the land?—Subscriber. When the land has been entered in e land office, paid for, and a cer- tificate given to the purchaser, it is ble for taxation by the state in ad-

vance of the issuance of the patent; as the land has actually become the private property of the purchaser and the United States holds merely the dry legal title. In the same way, if the homesteader has completed his prescribed term of residence upon the land and he is entitled to make his final proofs, he has completed all that he is required to do and the United States again holds merely the dry legal title and the land is subject to taxation by the state. As to the im- provements placed upon the land the exemption which applies to public land never does apply and these im- provements are at all times taxable by the state.

INVESTIGATE TRACTORS NOW

Write for different tractor catalogs. Study the maker's claims for each. Note the advantages each would have when applied to your own farm prob- lems. But our recommendation to ev- ery farmer is to investigate farm trac- tors now. War or no war, power farming is here to stay and the most successful farmer of the future will be the one who, like the successful man- ufacturer, installs the latest and most efficient machinery.

A SUGGESTIVE COMBINATION.

"So this is the watch you are giv- ing your fiance for his birthday. I don't fancy quite so much engraving on it, dear. Instead of 'Grace Osborn to Henry Lewis' why didn't you simply have the initials put on?" "I wanted to, dear, but 'G O to H L' seemed sort of rude and pro- fane."

**OUR ADVERTISERS RELIABLE**

We guarantee our subscribers against  
 loss through dishonesty of any adver-  
 tiser in the Cultivator. We do not at-  
 tempt, however, to adjust trifling dif-  
 ferences between subscribers and honest,  
 responsible advertisers, nor will we pay  
 the debts of honest bankrupts. Notice  
 of complaint must be sent us within 30  
 days from date of the transaction, and  
 the subscriber must have mentioned the  
 Cultivator when writing the advertiser.

**INVEST THE PENNIES**

The director of the mint calls  
 attention to the shortage of small  
 coins, especially pennies, and urges  
 as one means of meeting the present  
 need that the children of America take  
 their pennies from toy banks and with  
 them buy war savings stamps. This  
 brings the pennies into daily circula-  
 tion and puts the savings of the kid-  
 dies of the country to earning interest.  
 It will now be but a few days until  
 these war savings stamps are on sale.

**EUROPEANS ARE SAVING**

The country is asking, "Why  
 are we eating of the less valuable  
 grains and sending our wheat to Eu-  
 rope? Why don't they eat potato  
 flour and the coarser grains?" In  
 answer to this, the information is giv-  
 en out that in England no bread may  
 be baked which does not contain at  
 least 20 per cent of potato flour or ma-  
 terial other than wheat flour. On the  
 other hand, to preserve health, the  
 same law prescribes that the bread  
 must contain 50 per cent of wheat  
 flour. In France the situation is still  
 more strenuous, and everyone is con-  
 serving from necessity.

May not Americans from choice aid  
 in the great conflict to the limit? Ev-  
 ery English and French soldier who is  
 made a better fighter because of be-  
 ing better fed may save an American  
 soldier.

**COOPERATE**

Cooperation never received  
 such attention nor such impetus as to-  
 day. Those having to do with affairs  
 in Europe are now suffering criticism  
 because each nation has been entirely  
 independent, and while there has been  
 no lack of harmony in feeling there  
 has been lack of harmony in action.

Now there is insistent demand that  
 there shall be oneness of thought and  
 action among all the Allies. Italy  
 made a wonderful fight, but she stood  
 alone and near-distaster came. Now  
 French and English troops are fight-  
 ing side by side with the Italians. Had  
 this cooperation come sooner the  
 Italian army would probably still be  
 in Austria. The same is true in the  
 affairs of our own government; this  
 lesson of cooperation is being learned,  
 and there has never been such unity  
 of action among people of all callings  
 and classes.

Now comes our state horticultural  
 commission with plans for a great con-  
 vention of fruit growers, and one day  
 is to be given up to the question of co-  
 operation. Some of the most success-  
 ful cooperators of the state will be  
 present and give and receive advice.

**KILL THE RAT**

California has some trouble  
 with the ordinary brown rat; it is,  
 however, of small importance in this  
 state as compared with the ground  
 squirrel. Even the gopher has it on  
 the rat for destructiveness. Let us  
 be diligent in eradicating all these  
 pests, incidentally keeping an eye on  
 the jackrabbit—which makes fine pot-  
 ted meats—and a few other of the  
 pests which are not so good to eat  
 but equally as destructive.

**BORROWERS BULLETIN**

The federal farm loan bureau of  
 the treasury department is issuing  
 the Borrowers Bulletin, which con-  
 tains rulings of the central board and  
 statements as to various requirements  
 and news of the growth of the farm  
 loan movement, also features of inter-  
 est to the borrowers, to whom it is  
 sent without cost.

The farm loan movement is report-  
 ed to be growing with great rapid-  
 ity, as shown by the applications for  
 new loans. The various local boards  
 have gone into operation and the work  
 is being pushed everywhere more sat-  
 isfactorily than during the first year.

**A FIRM HAND**

Now comes a new society, the  
 American Defense Society, circulat-  
 ing petitions in effect that the govern-  
 ment take a strong hand with those  
 who are pro-German or disloyal. We  
 believe with this organization that  
 swift punishment should be meted out  
 to those who are endeavoring to em-  
 barrass most efficient service of our  
 army, navy or producers of food or  
 other military supplies. However, we  
 believe the federal government is tak-  
 ing a much stronger hand than ap-  
 pears on the surface. The wonderful  
 efficiency of the German spy system  
 has been dinged into our ears until  
 we feel that sometimes Americans  
 fail to recognize the wonderful work  
 of our own secret service, but enough  
 hints have been dropped as to recent  
 occurrences to show that some re-  
 markably efficient work has been ac-  
 complished.

It is reported that when the Italian  
 forces found German officers within  
 their own ranks in Italian uniforms  
 that they were given "summary treat-  
 ment" without trial. We can imagine  
 how "summary" such treatment  
 would be, and we believe officials of  
 the United States will have fullest  
 support of our people in meting out  
 swift justice to traitors in this coun-  
 try.

Hohenzollern employees in America  
 are beginning to hear footsteps approach-  
 ing. Not conscience warns them, nor the  
 fear of God, but the very quiet and ef-  
 ficient work of our secret service.

**WAR TAXES**

Next week we will take up more  
 fully the discussion of the income tax,  
 but one point this week. One farmer  
 has said; "I will not worry over the  
 income tax matter. If the government  
 wants it, let it come for it." This  
 gives opportunity for warning in this,  
 that one of the principal provisions of  
 the income tax bill is that every unmar-  
 ried person with an income of \$1000  
 or more and every married couple  
 with combined incomes of \$2000 or  
 more must make and file with the in-  
 ternal revenue collector a sworn state-  
 ment called a Return, on return forms  
 to be had by application to the treas-  
 ury department at Washington or  
 from local revenue collectors, this to  
 be for the income received during the  
 12 months, January 1 to December 31,  
 and the return to be made prior to  
 March 1. Failure to file this return  
 makes one liable to severe penalties  
 which will be defined next week.

**War Estate Tax**

This tax is assessed and levied on  
 the estate of a deceased person before  
 distribution. It is imposed upon the  
 net estate of every decedent whether  
 a resident of the United States or not.  
 The procedure is fully outlined in the  
 law but is of such a nature that every  
 executor or administrator of an es-  
 tate would follow the advice of an at-  
 torney so that the details are not giv-  
 en here. In a word, however, the es-  
 tate consists of all real and personal  
 property held at time of death or con-  
 veyed by gift or in trust in contempla-  
 tion of death, and the interest of the  
 decedent in property held jointly with  
 others. Any transfer of a material  
 part of one's estate, which is in the  
 nature of a final distribution, made  
 within two years prior to death will  
 be considered as a part of the net es-  
 tate in levying this tax. This tax  
 must be paid within one year of date  
 of decedent's death. A penalty of  
 \$5000 and imprisonment for one year  
 may be imposed in case of false state-  
 ment in making the return. Other  
 penalties for not paying this tax when  
 due may also be levied.

**War Excess Profits Tax**

In addition to the income tax, all  
 firms, partnerships, or corporations  
 must pay an excess income tax of 20  
 per cent of the amount of net income  
 in excess of deductions and not in ex-  
 cess of 15 per cent of the invested cap-  
 ital. Other percentages obtain with  
 other net incomes until it is 60 per  
 cent of the net income in excess of 33  
 per cent of such capital. Effective  
 since January, 1, 1917.

\* \* \*

A taxable year means 12 months  
 ending December 31 excepting in case  
 of corporations whose own fiscal year  
 may be reckoned with.

The taxes are due from all living  
 within the boundaries of the United  
 States, which means all states, the  
 territories of Alaska and Hawaii and  
 the District of Columbia.

Remember all stamp taxes, which  
 includes parcel post special war stamp  
 taxes, become effective December 1.  
 Parcel post packages, one cent for  
 each 25 cents of stamps on the pack-  
 age, or fraction thereof. That is, if a  
 parcel post package calls for 25 cents  
 postage or less, then a one cent war  
 stamp must be attached. If it is 26  
 cents and under 50 cents, then two  
 cents war stamp tax.

Some of them live across the Rhine,  
 and some on the banks of the Rhenus;  
 but the worst enemies to whip in line are  
 the I and the WE and the MINE and the  
 US; for I don't like to eat fish and beans,  
 and WE don't want Our Boy to be shot,  
 and MY war tax is beyond my means, and  
 some of US play fair—some do not.

**This Week's War News**

British troops have advanced near-  
 ly to Jerusalem, and its capture is deem-  
 ed almost a certainty.

Less than ten per cent of Califor-  
 nia's national army candidates were  
 rejected because of physical disability

In the south the French are deliver-  
 ing some crushing blows on the forces  
 of the crown prince and have captured  
 two lines of trenches.

There has been a severe engage-  
 ment between the English and Ger-  
 man fleets in the North Sea, one Ger-  
 man vessel reported sunk—no par-  
 ticulars given out.

The navy announces that it can ac-  
 count for six submarines during the  
 last seven days. One of these was  
 captured and line attached, but ow-  
 ing to its crew opening seacocks, the  
 vessel went to the bottom.

The building of American warships  
 is being rushed, many of the ship-  
 yards running three shifts a day, and  
 it is said that the output of American  
 yards alone will soon be greater than  
 the daily toll of the U-boats.

We referred in last issue to the fact  
 that the Allies had little comfort in  
 the news of the past seven days. The  
 tables are turned, however, and Lord  
 Northcliffe has referred to the past  
 week as being the "best week of the  
 war."

The Italian army with its English  
 and French reinforcements, has with-  
 stood some of the hardest drives by  
 the pick of the German army. The  
 Italian navy has aided materially in  
 holding the line which ends on the  
 Adriatic. It is said that three-fourths  
 of the population of Venice has mov-  
 ed, but the city seems to be safe.

The situation in Russia is still one  
 of uncertainty. The latest informa-  
 tion is that a daughter of the former  
 czar, Tatiana Romanoff, is on her  
 way across the Pacific to this coun-  
 try, having escaped from Tobolsk, and  
 announces she has come to make an  
 appeal, not for the restoration of the  
 czar, but for the establishment of a  
 United States of Russia.

The sturdy resistance of the Ital-  
 ians is winning admiration. It is now  
 shown that the sudden break at the  
 first attack of the Germans was  
 largely because of treachery on the  
 part of German sympathizers in the  
 uniforms of Italian officers, giving or-  
 ders, which were too often obeyed.  
 Air men also scattered forgeries of  
 Roman newspapers known to be loyal  
 filled with false statements as to dis-  
 affection in ranks of the reserves  
 which were supporting the front line.  
 These reports were believed by many  
 of the Italian soldiers who were dis-  
 heartened and retreated.

"Byng, bang, bust" was the slogan  
 of General Byng's men as they made  
 their famous drive on the Hinden-  
 burg line in northern France. Thou-  
 sands of German prisoners and hun-  
 dreds of guns were captured. The  
 drive began with the tanks advancing  
 quietly without any artillery prepara-  
 tion. They were followed by 300,000  
 English, Scotch, Irish and Canadian  
 soldiers. The German lines were pene-  
 trated to a depth of seven or more  
 miles in some places for a length of  
 over 35 miles. Many small towns were  
 captured, the city of Cambrai practi-  
 cally surrounded. As we go to press,  
 the advance is beginning in Belgium,  
 and it is now thought that not only  
 Cambrai, but Lens, Lille and Douai  
 will all soon be in the hands of the  
 Allies.

# Agricultural News Notes of the Pacific Coast

## Northern California

"Citrus blast" is affecting the orchards of Butte County.

Yacaville has shipped 1225 carloads of deciduous fresh fruits.

Farmers at Gridley, Butte County, are making sorghum flasks.

Yolo County guarantees to reach quota in wheat production.

Buttle men of Eldorado and Amador counties met at Jackson last Saturday.

Eldorado County has made good and is now ready for its farm adviser.

One hundred and ninety students attended the short tractor course at Davis.

Nevada County's output of Bartlett pears amounted to about 70 carloads this season.

Ferndale, Humboldt County, creameries paid to the growers 54-55½ cents for butterfat.

Rice producers have been informed at the government will do no price fixing for rice.

Compulsory farm labor was talked at the state fruit growers convention at Sacramento.

The rice market has been quiet but the growers are now holding for four cents or no sale.

Capay Valley, Yolo County, is shipping large quantities of berries to an Francisco market.

One hundred and sixty-three are taking the tractor short course at the university farm at Davis.

The United States office of public roads is investigating as to road conditions in Sacramento Valley.

Fruit growers at Sacramento had a "Hooverized" banquet, no wheat, no meat, but some banquet all the same.

Sheepmen of Sacramento Valley are endeavoring to have pasturing areas in the national forest reserves enlarged.

Paradise, Butte County is anticipating great extension of farming and orcharding because of early completion of the Magalia dam.

The olive producers of Butte County report that they are well supplied with laborers and harvesting is proceeding satisfactorily.

The rice counties are appealing for "duck districts." In any case some step must be taken which will eliminate the pest of ducks.

At the last meeting of the Humboldt County Dairymen's Association the labor question and better dairying methods were discussed.

Roseville, Placer County, is shipping green olives to Chicago where an Italian processes them for special trade according to Italian formula.

Two million pennies is the need of San Francisco. War taxes have greatly increased the demand for small coins in business transactions.

Mr. Nagle's advice to cease planting orchards has stirred up the fruit growers in all parts of the state to feel that transportation will be provided.

Permit to graze livestock in the Shasta national forest has been denied for 1918 to a large cattle company whose manager refused to aid in fire protection.

The farm adviser of Placer County is urging careful selection of bean seed, and seed has already been saved which it is thought will materially increase that county's output next year.

## Central California

Tulare County expects to ship some oranges before the first of December.

Tulare County is going after speeders and other breakers of traffic regulations.

The Peach Growers' Association cleaned up about \$120 a ton for dried peaches.

State Market Director Weinstock is organizing the dairymen of San Joaquin Valley.

Dairymen of the west side of San Joaquin Valley are organizing for co-operative marketing.

Practically all bean crops of the valley have been harvested without a particle of injury from rain.

Tulare County is to have a farm adviser who will begin his service January 1. Name not yet announced.

Madera County farmers are contemplating growing sugar beets in 1918.

This state has shipped 22,000 cars of fresh deciduous fruits. This is largely in excess of any preceding year.

Turlock, Stanislaus County, estimates its next year's planting of cantaloupes at somewhat in excess of this year's.

Many cattle have died near Porterville, Tulare County, it is thought because of eating large quantities of acorns.

The work of forming a farm center at Hanford, Kings County, has been postponed because of lack of interest amongst the farmers.

Dairymen of Kings County received \$250,000 on a recent creamery pay day. Prices ranged from 52 to 53½ cents per pound of fat.

The Kings County live stock inspector reports no hog cholera and one case of anthrax in the county; other stock conditions excellent.

The seventh annual of the Stanislaus Poultry Association opens in Modesto December 5 and closes December 8. Entries close next Wednesday.

Friends of the Rominger initiative bill believe they have sufficient names for the securing of a ballot on the bill at the regular election in November 1918.

Horticultural Commissioner Rutherford of Stanislaus County reports the finding of European elm scale on various elm trees along the streets of Modesto.

One of Kings County's biggest fruit packing houses will have its capacity doubled and its output further increased by installation of new machinery.

The Prune and Apricot Association of San Jose is sending out "Sun-Sweet Recipes, or Ninety-Four Ways to Serve the Richest Sun-Sweet Prunes and Apricots."

During the present week, which is "Prune Week," the Santa Clara Valley is trying to make general the presentation of cartons of prunes to the boys in the trenches.

The California Peach Growers' Incorporated, has paid seven per cent as a first dividend to its stockholders. There are approximately 1400 members of the association.

It is stated that the state fish and game commission has handled in excess of \$1,000,000 in the past four years, and some are asking for an investigation of its affairs by experts from outside the state.

## Southern California

Butcher shops of Los Angeles are closed every Tuesday.

Pomona is organizing a local farm center of the county farm bureau.

California now supplies 71 per cent of the total United States lemon consumption.

The sugar factory at Oxnard produced about 1,000,000 bags of sugar this season.

The farm adviser of Riverside County has been giving a series of pruning demonstrations.

Some of the finest trotting horses from Hemet won long purses at the Arizona state fair.

Notwithstanding the hot weather "drop" California's lemon output will be greater than ever.

A vegetable packing house is being erected at Compton, Los Angeles County. It will cost about \$27,000.

Pig feeding clubs of the Imperial Valley are lining up for a new feeding contest which will begin December 1.

Expenses are being reduced by the forest service by discharging rangers from service during the rainy season.

All Southern California Valencia packing houses are sending out greater shipments than any preceding year this date.

The California Walnut Growers Association is now employing 400 people in its nut cracking and sorting department.

Chino, San Bernardino County, is continuing its effort to secure fruit acreage which will insure its cannery before another season.

Yucaipa, San Bernardino County, recently held a meeting to discuss wheat growing methods and greater acreage this year.

J. B. Lillard of the Los Angeles high schools has been made state supervisor of agriculture. He will make a campaign for practical agricultural work in the high schools of the state.

Ventura County will produce 952,000 bags of Lima beans; Orange County, 270,000; Los Angeles, 198,000; Santa Barbara, 72,000; San Diego, 62,000. The state will produce of all kinds of beans about 8,800,000 bushels.

The Imperial County horticultural commissioner is taking steps to secure the importation of cotton seed free of all pests and is appealing to cotton growers to aid in keeping the county clean of all cotton infesting insects.

The Poultry Producers' Association of Southern California was represented at the recent San Francisco meeting by President Davison. The association has insisted on all members remaining true to the contract for the season's marketing.

The government has placed an order for 100,000 pounds of small white beans and 75,000 pounds of limas, with prices fixed at 11 cents for small whites and 11½ for limas. It has been claimed that this is two cents under the price paid for the beans.

The National Farm Loan Association branches in various parts of Southern California are endeavoring to work in harmony and reduce the number of local associations so as to secure more uniform action. The amalgamated association was formed on October 20, and several of the old local associations have already been disbanded.

## The Coast and General

Arizona reports sheep coming down from ranges in excellent condition.

One evaporator at Payette, Idaho, is saving a thousand bushels of cull apples daily.

Washington sheep men complain because of stock coming from ranges in rather poor condition.

Two hundred and twelve Jerseys were exhibited at the National Dairy Show held at Columbus.

Eastern Oregon farmers are complaining because of the dry fall. Hay is now selling around \$20.

Arizona closed its most successful state fair last Saturday. Beef classes were especially well filled.

The 54th annual convention of the National Wool Growers' Association meets in Salt Lake City January 17-19.

The food administration has ruled that frozen poultry stored during 1916 must be sold during the present winter.

The California Wholesale Potato Growers' Association has asked for a minimum carload of 40,000 pounds for potatoes and onions.

One hundred thousand dozen eggs were recently landed at Wellington, New Zealand from California. They sold at 54 cents per dozen.

Eastern Washington dairymen are threatening delivery of their own milk to consumers in order to save paying tribute to milk distributors.

Sixteen thousand North Dakota farmers recently took part in a campaign against ground squirrels, and four and a half million acres were cleared.

The Commissary General of Italy has decreed that for bacon, lard, or other hog fat the wholesale price shall not exceed 525 lire (\$101.32) per quintal (220.46 pounds).

Experts connected with the departments of agriculture of Trinidad and other West India Islands are experimenting with flour of bananas and root crops to find a substitute for wheat flour in bread.

The Potato Association of America held its annual at Washington last week. Lou D. Sweet of Denver, was made president, W. P. Macoun of Ottawa, Canada, vice president, and Dr. Wm. Stuart of Washington, D. C., secretary.

Every liquor bar at Washington, D. C., is "Hooverized." This not for the sake of the booze in the trenches, but for the sake of grain conservation. The Anti-Saloon League will meet in Washington, December 10-13 and discuss ways of making this conservation more general.

The Northwest apple shipping section is having severe losses because of car shortage. One special fruit train of 52 cars was recently brought out of Wenatchee. Apple shippers are experimenting with shipping fruit in ordinary box cars with oil heaters to save the fruit, this because of lack of refrigerator cars.

It is declared to be illegal to take letters which would normally be mailed for three cents to the office of delivery where they may be mailed for two cents. San Francisco merchants with large numbers of letters for Los Angeles delivery have been instructed to cease sending by special messenger in large quantity to the latter city and mailing under two cent stamp.

## Jerseys for Net Profits

You're in the dairy business for profit—the *net* profit that your herd has made you at the end of the year will determine the size of your bank account. Jerseys yield the largest returns from every ounce of feed—proved by tests at two great expositions. Jersey milk averages 5.3% butter fat, 9.1%

solids not fat—highest of all breeds. Buy a Jersey bull. Write the breeders advertised below for prices, pedigrees, etc.

## Dairy Farming Under War Conditions

By F. W. Woll

MAKING dairies produce to the limit is a war measure which is being urged by our state university. The article which follows is a portion of the one under above heading begun in last week's California Cultivator. It touched upon the difficulties confronting the dairymen because of high feed cost and other conditions which the farmer cannot change but must consider. One hundred and fifty pound cows must be exchanged for cows that increase that yield at least 50 per cent. There must be improved feeding methods. Continuing Prof. Woll says:

The silo has proved a good investment on California dairy and stock farms, as it has in eastern and central states. It enables farmers to secure a maximum feed supply from crops like Indian corn, sweet sorghum, grain sorghums (milo, Egyptian corn, feterita), small grains, Sudan grass, rye grass and clover, and alfalfa (first and last cuttings only).

With a silo on the ranch the farmer can carry a maximum number of cows and supply his stock with palatable succulent feed of a uniform quality at any time during the year, thus furnishing conditions that are especially favorable to a large milk production. Where silage crops cannot be grown successfully, or where conditions do not permit the building of a silo, root crops, like mangels, carrots and turnips, (except when the milk is used for the manufacture of butter, in which case turnip feeding should be avoided), may be raised to advantage on good land; where large yields are obtained roots make excellent substitutes for silage although they are not as conveniently fed out. On hilly land or on ranches with only small areas of arable land it is necessary to feed more grain or other concentrates than given in order to secure and maintain a satisfactory milk flow throughout the lactation. Under such conditions the method of increasing the dairy production must come mainly through herd improvement.

Liberal feeding is always advisable for good dairy cows. It is only the feed eaten beyond that required for body maintenance which gives returns "at the pail", and if fair proportions of nutrients of different character are fed, like alfalfa and silage made from the crops mentioned above, with or without grain, there is no danger of fattening dairy bred cows which are the only kind that permit of profitable dairying under present conditions.

### Herd Improvement

Along with a correct system of feeding, herd improvement is essential for success in the dairy business. This may be accomplished by two methods, both of which should be adopted:

First, by determining which cows in the herd are low producers, considering an entire year and not only the time of maximum flow, and eliminating these from the herd. The information necessary to do this is furnished by regular weighing of the milk of the individual cows, say one day each month during the lactation, accompanied by testing of samples for butterfat. The milk is most conveniently weighed on so-called milk scales, costing about \$3.00, and the testing for content of butterfat is done by the Babcock test. If facilities for milk testing are not found at the farm, arrangements can generally be made for having tests made at a neighboring creamery or cheese factory. Most dairy farmers are busy men who have all the work they can attend to in taking care of the regular work of the ranch and the dairy, and they can hardly, therefore, take time to weigh and test the milk from their cows. In order to assist such farmers and others who cannot do this work themselves, cow-testing associations have been formed which employ young men to weigh and test the milk of cows owned by members. There are 18 such associations in operation at the present time in the state, some of them nearly ten years old. They have been of the highest value for the improvement of dairy conditions in their respective communities, and will no doubt increase in number as well as in usefulness in the years to come.

Every dairy center would be greatly benefited by the establishment of such a cow-testing association.

Second, by placing at the head of the herd the best pure bred dairy bull of a family of high producers that one can afford. It has been fully established that the power of transmitting a capacity for a large dairy production lies mainly in the male. It is often said that the male is half the herd, but in many cases his influence has proved to be still greater. A good dairy bull will largely increase the productive capacity of his offspring beyond that of their dams, especially when these are low producers. There are many examples showing that a bull of a high producing strain has increased the average production of his heifers by 50 to 75 pounds of butterfat per year over that of their dams.

An exceptionally high dairy production can only be reached by the use of such intensively dairy bred bulls in the herd and by developing the heifers and cows to their full capacity through careful methods of feeding and handling. This is the way in which records of 500 to 600 pounds of butterfat, or more, a year are obtained in individual cases, and records of over 400 pounds as a herd average. A good average herd standard, however, is 300 pounds of butterfat, corresponding to nearly a pound of butter per cow for each day in the year. This standard, which is twice the average yield for dairy cows in the state, can be reached by the methods outlined above, by any dairy farmer who has the requisite qualities that make for success in dairying: a knowledge of the characteristics of good cows and of modern dairy methods, a deep interest in his animals, with an ability to work hard and during long hours, and to produce abundant forage and grain crops on his land for the feeding of his stock. Such a farmer will make a success of dairying, even if present feed prices continue and milk does not bring much more money than it has in the past.

### ARIZONA STATE FAIR

Continued from Page 547

each won their share of blues and reds.

Greenlee County had a small but pleasing exhibit largely of vegetables.

Yavapai, the "mother of counties," as usual showed box after box of apples and plates of almost all kinds of fruit, except citrus, which is grown in the state. In the grains and farm products too there was no lack of variety and quality. More than 30 first prizes, as well as a number of specials and many seconds, decorated the Yavapai log cabin, after the decision of the judge had been rendered.

### ARIZONA'S BIG HOLIDAY

Written for California Cultivator  
By F. F. Stonerod

IF Californians are not fully aware that those Arizona folks know how to stage a big fair and livestock exposition they should make it a point to run over to Phoenix next year and be convinced. Pendleton, Cheyenne, Buffalo Bill never put on a better show than we saw at Phoenix. World famous cowboys and cow girls were there to rope calves, break wild horses, bulldog steers, and put on all the hair raising stunts possible. There was many a \$5000 horse race and nothing under \$1000. Such a prize list brought out all the classy trotters, pacers, and runners in the West. Then there were a dozen other high class attractions, so many in fact that the thousands of spectators who filled the huge grandstand daily and overflowed onto the field could not possibly take everything in at once; it was like watching a five ring circus. Arizona's state fair week is the big event of the year. It is her holiday, and the people come from every corner of the great state and click the turnstiles so fast it keeps the gate-man dizzy.

We had heard much about the quality of the livestock exhibits at this fair but had no idea we would see one of the very best expositions of pure

bred animals held in the entire western country. The exhibit was all the more remarkable when it is considered that the Salt River Valley country is in the grip of the cotton fever, feed-stuffs are much higher in price than in California, and the labor problem is more acute also than in other sections. When farmers can get 80 cents a pound for Egyptian cotton, and it costs \$70 per bale to produce it, and several ranchers are producing a bale and a half to the acre, it can readily be seen that there are other attractions besides live stock. Then Arizona's rich mines are all running night and day, and the whole state is experiencing a boom.

One finds a large number of Southern born people in Arizona. They come from Texas, Kentucky, Tennessee, Mississippi, and other states, and they readily accustom themselves to the new conditions. Harold Bell Wright certainly went to the right spot to find local color for his great book, "When a Man's a Man," when he buried himself in the hills and valleys of Arizona. The streets of the cities are filled with tall cowboys fresh from the ranges. The hotel lobbies are overflowing with wealthy cattlemen and big landowners, and this is the class of people who come out to the big fair and take a real interest in the livestock section.

We saw the best Hereford show of the year at Phoenix, both in quantity and quality. Arizona is a Whiteface country sure enough. The Lone Star herd from Midland, Texas brought over about 25 head this year, and Governor Packard had a beautiful string which filled one entire barn. The Bartlett-Heard Land and Cattle Company showed a fine bunch of Shorthorns, while the sheep, swine, and dairy show was a credit to any state.

Ruby and Bowers were the only California breeders present, and they had a nice lot of prize winning horses

and jacks on hand. Locke's Jersey herd was missed; this is the first time for several years Mr. Locke has not been there. However, the Locke herd's place was taken by the Falfurrias Jersey herd from Texas, owned by Ed C. Lasater. Many of the animals in this herd had won high honors at Columbus, Waterloo, the Texas state fair and other big shows this year, so that we had the opportunity of seeing the best in the business.

Old time fair goers said the exhibit this year was not any larger than usual but was much higher in quality. One thing that impressed us was the number of young breeders showing their stock and winning prizes too.

Arizona probably has more open range left than any other Western state but even here the open range is passing rapidly before the onrush of the small farmer. Better seed stock is the cry here as elsewhere, and the cry is being answered by an influx of the best bred animals to be had. Registered herds of beef and dairy cattle, hogs, and even sheep are becoming more numerous every year, and as this tendency toward better animals grows, so will the size and importance of the state fair. We in California should endeavor to get into closer touch with our big neighbor, commercially, socially, and otherwise because we are her nearest outlet to the sea. Her ranges turn off hundreds of thousands of cattle every year which are eagerly sought by buyers from all over the country. Our California farmers who have abundance of grass and feed in normal years have been permitting Eastern buyers to take the bulk of this good feeder stock away from them. Here is a fertile field for our California breeders of registered stock, a field which has scarcely been touched. If it is cultivated properly, and only the best quality sold with a guarantee to that effect, there is no limit to its possibilities.

Phoenix fair this year, including a son of Count Avon, the noted Curtiss sire. The Heard bull is a half brother to Wm. Carruther's champion at San Francisco this year and looks very much like him. This concern is the largest breeder of registered Shorthorn cattle in Arizona and Mr. Heard himself is high in the councils of American livestock organizations.

Chas. Peterson, Gilbert, Arizona, exhibited the only herd of Guernsey cattle this year, which, while not in prime show condition, gave a good account of itself.

Morris B. Carpenter, Phoenix Holstein breeder, had 12 head at the fair. He won first on junior yearling bull and bull calf, and in addition won three red and two white ribbons.

Tempe Normal School exhibited nine head of Holsteins and was very much in evidence in the other livestock departments.

P. M. Arends, Phoenix, won second on aged bull, second on aged cow, and third on senior yearling heifer. As he only brought out three head his percentage of winnings was very good. He exhibited Holsteins.

Wm. Appleby and Sons, Mesa, Arizona, showed 16 head of Jerseys with which they won a long string of prizes. This company has been showing Jerseys at the Arizona fair for years and is numbered among the state's leaders in the Jersey field.

W. W. Bradshaw, Phoenix Jersey breeder, had 20 head out this year. He won 17 ribbons and is the proud owner of the leader in the state dairy cow competition, Duchess of Meadowbrook, who made 474.4 pounds butterfat last year on nothing but pasture.

J. Irwin Burk, Gilbert, Arizona, breeder of Brown Swiss cattle, showed 14 head at the fair but had no competition. However, he would have made it interesting for competitors as his stock is strictly high class.

W. H. Bukey, Mesa, Arizona Jersey breeder, was one of the heaviest prize winners at the fair with his 13 head. He has 40 females and two head bulls on his ranch and is a great lover of the Island cow. Before the fair was over he selected a bull calf and two bred heifers from the Falfurrias string, which are among the finest yet brought into Arizona. The calf is Noble Rosebud's Majesty, a six months old son of Rival Majesty of St. Cloud, who has 50 R. of M. daughters

MILK . . . . and WAR TIME

In these days of high prices for dairy products, the "poor milker" is more than ever a liability.

But before you sell the cow that is not producing well, try to improve her condition. Her milk value is much greater than her meat value.

Most poor milkers are non-productive because of some defect of health, which can be quickly remedied by intelligent treatment.

Kow-Kure is a medicine that acts quickly on the organs of digestion and milk production. Its widely known tonic and curative qualities have made it the standard cow medicine for the prevention of disease and the treatment of Abortion, Barrenness, Retained Afterbirth, Scouring, Lost Appetite and Bunches.

Give Kow-Kure a trial; it will do for you what it is doing for thousands of others. Feed dealers and druggists sell Kow-Kure; 55c and \$1.10 packages. Send for free treatise, "The Home Cow Doctor."

DAIRY ASSOCIATION CO.,

KOW-KURE

Santa Anita Rancho

Anoakia Breeding Farm

ARABIAN THOROUGHBREDS: Two-year-olds, sired by imported Stallion Ibn Mahruus, head of our Arabian stud. Dams are the choicest thoroughbred mares on Santa Anita Rancho.

SADDLE HORSES: Some of which were sired by Ibn Mahruus, world renowned imported desert saddle stallion, and Don Castane, a five-gaited Kentucky saddle stallion. These horses are mostly three-year-olds.

POLAND-CHINA AND BERKSHIRE BOARS: Four to nine months old. Sired by famous Poland-China herd boars, Banker's Boy and Glenview Wonder. And Berkshire boars, Kintyre Laird, Grandson's Duke and Fashion's Longfellow 5th. The dams are from the best blood lines. Most all these animals have winnings at World's Fair. Write for catalogue.

HOLSTEINS: We will sell a number of young bulls. Some sons and grandsons of the noted Prince Gelsche Walker, and bulls from one World Record cow and two California State Record Cows. Write for details.

## CUTTER'S BLACKLEG PILLS

"California's Favorite"  
for nearly 20 years

For the Prevention of Blackleg  
in calves and young cattle

Their superiority is due to nearly  
20 years of specializing in  
"Vaccines and Scrums only."

Year in and Year Out they give  
better satisfaction than any  
other vaccine made, and the  
cost of a few cents per dose  
is cheap insurance against a  
disease that always takes the  
fattest and best.

Single Pills may be used for ordi-  
nary and range stock.

Double Pills should be used for  
pure bred and high grade stock.

Use any Injector, but Cutter's  
simplest and strongest.

Prices:  
10 dose pkge. Single pills \$1.00  
50 dose pkge. Single pills 4.00  
10 dose pkge. Double Pills 1.50  
50 dose pkge. Double Pills 6.00  
Cutter's Pill Injector.... 1.50

Insist on Cutter's. If unobtain-  
able, order direct.

Write for new booklet, "The  
Control of Blackleg." It tells  
about Anti-Blackleg Serum  
which cures Blackleg and  
may be used simultaneously  
with vaccine to combat out-  
breaks and safely protect val-  
uable stock.

### DUROC JERSEYS

Sows, gilts and a few boars of the best  
breeding for SALE

H. P. Slocum & Son R 1 Willows, Cal.

and many more on test in the Falfur-  
rias herd. His dam is a 498 pound  
two year old and the calf was first in  
class at Phoenix and junior champion  
at the Texas state fair this year. Mr.  
Bukey got two wonderfully typey heif-  
ers from the same herd sired by Cow-  
slip's Golden Noble and in calf to Vil-  
lage Knight, the greatest son of Gam-  
bage Knight. Mr. Lasater paid \$5000  
for the sire of these heifers. Their  
names are Cowslip's Oxford Victress  
and Cowslip's Handsome Grace, both  
first prize senior yearlings.

Arizona State University also got a  
Falfurrias Jersey bull calf, Nobles  
Topsy's Eminent Lad, a senior year-  
ling son of Noble's Eminent Lad and  
out of Nobleman's Topsy of Falfur-  
rias, a wonderful young cow. The bull  
was first and junior champion at Pho-  
enix.

The Boys' Pig Club exhibit at the  
Arizona state fair was a credit to the  
industry of the youngsters and their  
feeding knowledge. They showed sev-  
eral breeds.

Rancho Aldona, Tucson, won senior  
champion Duroc sow at the fair on  
Wikleta Queen 3rd 451370.

O. M. Trotters, Sunset herd of  
Duroc-Jerseys from Artesia, New  
Mexico, was the big surprise of the  
swine division of the Arizona state  
fair this year. Mr. Trotter brought  
over a wonderful herd and one which

would have won consistently on the  
California circuit this year. He took  
the sweepstakes prize on both boar  
and sow and a flock of blue ribbons.  
His herd boar is Brookwater Chief, by  
Cherry King. Mr. Trotter is another  
breeder who expects to make the  
coast shows next year.

Frank Reed Sanders, Chandler, won  
12 firsts, four seconds, and four thirds  
in the Holstein class at Phoenix, in-  
cluding the junior and grand cham-  
pion bull, senior and grand champion  
cow, and junior champion heifer.

Scharbauer and Eidson, Midland,  
Texas, won grand champion Hereford  
bull on Prince Hesiod 165th, by Maple  
Lad 40th, he by Bonnie Brae 8th. He  
was an outstanding individual carry-  
ing a beautiful coat of hair, mellow  
flesh, perfect head, and a stylish car-  
riage. He would be a hard bull to beat  
in any show ring. This concern  
brought over a tip-top string of White-  
faces.

Cottrell and Packard, Tempe, Ari-  
zona, won junior and grand champion  
Hereford female on a heifer calf of  
their own breeding. This seems to be  
a big year for calves as the grand  
champion female at Sacramento also  
went to a February calf. The Pack-  
ard herd was a strong winner in the  
female classes and also won high hon-  
ors in bulls including the senior  
champion, Beau Tempter.

## Who's Who

With the issue of August 11 the Cultivator started its series of "Who's Who" articles to bring before its readers some of the livestock producers of California who are responsible for the large development of the industry. Where did they come from and how long have they been engaged in California development, also how do they look, so pencil and camera are to be used, and some homely, everyday photographs and notes regarding them will bring us closer together. Bear in mind we say "homely photographs" and not photographs of homely people. The idea we wish to convey is that so far as possible we will secure photographs in everyday surroundings at the homes of the livestock producers.

Written for California Cultivator By F. F. Stonerod

### H. V. BRIDGFORD

**P**ROBABLY no other Holstein  
breeder in California has  
come to the front so rapidly  
as has H. V. Bridgford, the  
controlling factor in the  
Bridgford Company of Knightsen. Two  
years ago his name was little known  
in Holstein circles, but the winnings  
of his fine herd at the stock shows and  
fairs have been so sensational that  
the Bridgford name is written in large  
letters. Fifteen firsts, several sec-  
onds, and grand championships in the

H. V. Bridgford

bull and cow class at Sacramento this  
year is more than one exhibitor's  
share.

Mr. Bridgford is the son of Judge  
Bridgford of San Francisco, a man of  
Southern birth and a noted horseman.  
H. V. Bridgford was born in Colusa,  
graduated from the high school, and  
after a course at Pierce College entered  
the retail grocery business which  
he followed both in Colusa and San  
Francisco for about six years. Then  
he went into the lumber and manufac-  
turing business in Siskiyou County  
and made a marked success of both.  
I neglected to mention that the Bridg-  
fords owned a large herd of Short-  
horns when they were living on the  
home place, so that he does not come  
by his love for livestock accidentally.

Wishing to remain in the stock busi-  
ness, but also desirous of living in the  
vicinity of San Francisco, the idea  
came to Mr. Bridgford three years  
ago to buy a ranch on one of the is-  
lands in the lower Sacramento River  
and stock it with pure bred dairy cat-  
tle. He purchased a large acreage,  
and those familiar with the fertility  
and richness of the river bottom soil  
in that part of California know he got  
a first class plant. Holsteins appeal-  
ed to him because he believed that  
breed would pay bigger dividends on  
the investment and thrive under the  
conditions of soil and climate which  
are so similar to those of their na-  
tive country. In selecting his founda-  
tion Mr. Bridgford had invaluable as-  
sistance from Mrs. Bridgford who is  
an exceptionally good judge of Hol-  
steins, and his herdsman, Ed Thomp-  
son. His first purchase was made in  
the herd of David Monroe, Spokane.  
Then he added 60 head from the best  
herds in New York. He wanted both  
production and individuality in his  
animals and he got both. He has no  
less than four cows in his herd who  
have better than 30 pound butter re-  
cords, and we have already mentioned  
the Bridgford cattle's ability to win  
in the show yard. His aged cows av-  
erage over 29 pounds butter in seven  
days; three and four year olds av-  
erage 25½ pounds, and two year olds  
average 17 pounds.

Mr. Bridgford is extremely popular  
with his fellows. Everybody likes this  
quiet, unassuming gentleman who is  
never too busy to give his time to  
those who ask for it, who is a good  
loser, and by the same token a good  
winner. Mrs. Bridgford is his right  
bower and accompanies him on every  
business trip and also with the show  
herd each year.

### TEXAS HEREFORD BREEDERS ANXIOUS TO SHOW ON THE COAST

For the first time since they estab-  
lished their famous herd of Herefords  
at Midland, Texas, the Scharbauers  
exhibited a show herd at Phoenix dur-  
ing the state fair in November. Next  
year they expect to bring their show  
herd to the Coast, and if they do Cal-  
ifornians will see something worth  
while. The Lone Star herd was es-  
tablished in 1894 by the Scharbauer  
Brothers, Chris and John. Chris look-  
ed after the pure bred and John had  
charge of the range cattle. Forty-five  
head of registered Anxiety bred cows  
were purchased that year but the reg-  
istration papers were put in the of-

Most valuable for bringing after-birth  
and also for treating barren cows and con-  
trolling abortion. It kills the infecting  
germs, breaks the uterus, removes the slum-  
p and mucus—no odor, no straining. More ef-  
fective than iodine, Lugol's solution, carbolic  
acid, creosol, much safer. Send for our Bul-  
letin 52 "Contagious Abortion" and testimony  
from leading breeders. Special Trial Offer  
General Laboratories—Madison, Wis.  
4120 So. Wisconsin St.

ice safe and forgotten, which accounts for the extra fine quality of the Lone Star unregistered stock today. Some time afterward this concern decided to establish a registered herd and a show herd for advertising purposes, and up to four years ago had the largest herd of registered White-face cattle in the country. It numbered 2300 cows and over 150 bulls. They showed at all the principal state fairs, the American Royal, and the International at Chicago. The home ranch property at Midland consists of 300,000 acres on which are ranged 20,000 high grade range cattle, 4000 purebred but unregistered cattle, and the registered herd consists of 800 cows and 50 bulls. Maple Lad 40th, whose get at Phoenix created so much favorable comment, is one of the best sires in this herd. The herd carries the best blood possible and the quality of the Lone Star stock is proof of the careful selection of individuality and breeding. Of recent years Chris Scharbauer has been in poor health and a short time ago sold out his interest to Mr. Eidson, and the firm is now known as Scharbauer and Eidson.

NOTED HEREFORD BULL COMES TO CALIFORNIA

One of the best bred and outstanding individual Hereford sires to come into this state in years is the December, 1913 bull calf, Bonnie 4th 625952, by Maple Lad 40th, he by Bonnie Brae 8th. His dam, Carrie Lee 6th 309008, was a wonderful cow with the same line breeding as the sire. Lamplighter, Don Carlos, and Paladin occupy prominent positions in this calf's pedigree. He was bred by Scharbauer and Eidson of Midland, Texas, and sold to George Watterson, of Bishop, Inyo

A \$2,000 Calf  
Bonnie 4th 625952. Owned by George Watterson of Bishop.

County, during the Arizona state fair at Phoenix for a long price. Rumor had it that the calf cost Mr. Watterson \$2000, and his owner said that if he had been born after January 1 instead of December 13 he would have been worth \$4000 to them for show purposes.

Bonnie won first in class and junior champion bull at Phoenix. He attracted a lot of attention throughout the show with his style and quality. He has a wonderful quarter, smooth shoulder, thick coat of hair, remarkably fine feeder head, and if he does not develop into a winner for Mr. Watterson a lot of cattlemen who saw him at Phoenix will be disappointed. Mr. Watterson has been quietly breeding up a splendid herd of registered Herefords for several years. He has been using one of Harris best Repeater bulls and the Repeater heifers crossed on this Anxiety, Bonnie Brae blood of the Texas calf should produce something fine.

Tagus Ranch reports the sale of a week old Aberdeen Angus calf to a Tulare County man for \$50. The youngster is an outstanding individual and is the youngest male Tagus has yet sold. The demand for Angus fat exceeds the supply, and the California cattlemen are just commencing to appreciate the qualities of the great black breed.

W. B. Carpenter, Red Bluff, is building up a fine herd of Berkshire hogs. He is an old breeder of Berkshires having been in the business off and on since 1887, most of the time in Australia. He is an admirer of the English type of Berkshire, one which is much sought after by many of America's best breeders on account of the bigger bone and better fleshing qualities.

The regular annual meeting of the Western Berkshire Congress will be held at the university farm, Davis, on February 21 and 22, 1918.

TO SUM UP

THIS SALE OFFERS: Six 30-pound cows and fourteen daughters of 30-pound cows, a greater number of both than have appeared in all previous California sales combined.

NOT A SINGLE FEMALE IN THE SALE has a record below 20 pounds butter in seven days at mature age.

THE HIGHEST SEVEN-DAY RECORD COW, Jennie Terzool Hicks 4th, ever offered in a public sale in California, and she is also the highest yearly record cow.

MISS KORNDYKE MERCEDES, Grand Champion Cow at California State Fair, 1917, and she is a granddaughter of Hengerveld De Kol.

MEADOW HOLLAND NUDINE, Grand Champion Cow at Riverside District Fair, 1917, and she is a 22.75-pound junior three-year-old.

A DAUGHTER OF KING KORNDYKE SADIE VALE, with an average of 33.86 pounds butter in seven days for her seven nearest dams, second highest in the world, and the highest of any heifer ever offered at public sale on earth.

A DAUGHTER OF K P TOLA JOE, 27-pound State record two-year-old daughter of King of the Pontiacs, and this heifer is sired by one of the best young sons of King Korndyke Sadie Vale. Money can buy no better combination of breeding.

FIVE SISTERS TO THE WORLD'S OFFICIAL BUTTER RECORD COW, Aaggle Acme of Riverside 2nd, and they are all out of A. R. O. dams with records up to over 31 pounds butter in seven days. First daughters of King Mead of Riverside ever offered at either private or public sale.

TWO DAUGHTERS OF PRINCE GELSCHIE WALKER, one out of a 29-pound dam, and bred to King Morco Alcartra.

FIVE DAUGHTERS OF SEGIS PONTIAC DE KOL BURKE, one of whose daughters has just finished a record of 934.25 pounds butter in one year as a senior two-year-old, California record in class and sixth highest in the world in class.

A SON OF THE WORLD'S RECORD FIRST CALF HEIFER, 35.33 pounds butter in seven days, and he is sired by the 41-pound bull, King Valdessa.

A SON OF MISS VALLEY MEAD DE KOL WALKER, 36.81 pounds butter in seven days as a junior three-year-old, California record for all ages, and he is sired by King Korndyke Pontiac, one of the best sons of King of the Pontiacs.

EVERY ANIMAL GUARANTEED AGAINST TUBERCULOSIS FOR SIXTY DAYS AND EVERY ANIMAL GUARANTEED TO BE A BREEDER.

THESE ARE JUST A SAMPLE of the great record making and show winning families that are represented in this sale. To describe every top notch animal would require a description of every animal in the sale. The catalog does it, and a copy is yours for the asking.

## A Pennsylvania Farmer Says Concerning Electric Motors on His Farm

"A one-horse power motor is located in the spring house for separating milk, churning butter, turning a grinding stone, etc.

"In the house, my wife has a 1/2-horse power motor for running a washing machine. This motor can be attached to any lamp socket.

"In the barn a 15-horse power motor mounted on a little truck may be moved to any part of the barn or barnyard for grinding feed, baling hay and threshing grain. By extending the cable we have used this motor 400 feet from the barn."

This letter suggests equally profitable installations around your house and barns. The General Electric Company manufactures all sizes of electric motors for farm use. Information will be gladly furnished by your lighting company or our nearest motor agency.

## Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Blvd., Los Angeles, are without charge. For immediate mail answer remit \$1.00. In writing questions give full symptoms or particulars of injury of animal.

### Cow Growing Thin

I have a Jersey cow that has become very thin in flesh. The bowels and kidneys seem to be working all right and we notice her chewing her cud. She is fed principally alfalfa with a very little bean fodder. She seems to have some difficulty in swallowing and does not like to drink cold water. We have noticed slimy froth hanging from her mouth.—Subscriber.

Something wrong in the mouth or throat. Something may have lodged in the soft tissues of the throat or well back in the mouth. If you could examine the mouth and throat you may find something sticking in the tongue or side of the throat that you could remove. That would probably end the trouble.

### Congestion of the Kidneys

Have a young mare that when heated up quickly becomes so stiff in the front legs that she can not walk on them and apparently suffers intense pain, throwing her head violently forward and backward. This condition will last from 15 minutes to two hours according to the exertion she has been put to. She is also sore in the back over the kidneys. She is an unusually heavy drinker. What is the trouble and what can be done?—Subscriber, Lathrop.

The stiffness and the throwing of the head as you describe are indications of congestion of the kidneys. Avoid overheating her. Apply a good liniment over the kidneys and give this: Two ounces salicylate of soda, eight ounces tincture of juniper berries and enough alcohol to make one pint. Mix. Give a full tablespoon of the medicine in the feed three times a day. Continue the medicine until it is all used.

### GREAT INTERNATIONAL

The livestock shortage the world over, and the determination on the part of American breeders and farmers to meet this condition as quickly as possible will doubtless cause greater interest in the International Stock Show which will be held at Chicago, December 1-8, than in any preceding event. There may not be as many entries from California, and California will hardly come home with as great honor as she did in 1916, so that the local interest may not be as great, but reports from other sections and efforts on the part of councils of defense in many of the Middle Western states indicate intense interest. The increase in the amount of livestock is urged not only because of the immediate need of meat but because of the immensely big corn crop which needs to be consumed in this country and made into a more condensed form of better "war food."

All authorities agree that about 80 per cent of the total annual corn crop of the United States is fed to livestock, about 30 per cent being fed to hogs in the principal corn belt states.

That leaves only about 20 per cent, or less than 600,000,000 bushels, to be marketed as corn. Now suppose that only 70 per cent of the entire corn crop were fed to livestock, that would leave ten per cent, or about 300,000,000 bushels more corn to be sold as corn. That would mean an increase of 50 per cent in the quantity of corn thrown upon the grain market.

Now if we take into consideration the further fact that there is an estimated yield this year in the United States of 3,210,000 bushels of corn, which is an increase of 627,000,000 bushels over the crop of 1916, or 456,000,000 bushels over the previous five-year average, and to this increase we add the above increase of some 300,000,000 bushels which would ordinarily be fed to livestock, to say nothing of the millions of bushels heretofore used for making whisky, alcohol, etc., it is easily seen that the usual quantity of corn thrown upon the grain

market and sold as corn will be more than doubled during the season just about to open.

### THE NATIONAL DAIRYMEN'S SALE

Holstein history was made at Columbus, Ohio, October 26 and 27 in the National Dairymen's Sale, when 134 head were sold for a total of \$85,285, which means an average of \$636.45, these figures not including \$3000 paid for a bull calf which was donated to the Red Cross. Only four other Holstein sales have ever been held which equaled this average, namely the Dollar Sale, Stevens Brothers' Sale, the Detroit Sale and the Worcester Sale. In this sale there were no \$10,000 to \$50,000 animals to help swell the total, the highest price being \$7100 for the 44 pound cow, Pauline De Kol Ophelia, followed by \$6000 for a 35 pound son of Rag Apple Korndyke 8th and \$4000 for a 30 pound cow bred to Rag Apple Korndyke 8th. Outside of these three animals, nothing in the sale crossed the \$3000 mark, although altogether 31 animals in the sale sold for \$1000 or over.

### A NOTED ARIZONA HEREFORD HERD

Everybody in Arizona and the Southwest knows Gov. Packard, cattleman, banker, capitalist, politician and public benefactor. Just over the international boundary line Mr. Packard runs enormous bands of Whiteface cattle over more than 150,000 acres of the best grass range in that section. He has his registered herd of Herefords at Tempe under the firm name of Cottrell and Packard. Mr. Cottrell has entire charge of the beautiful Tempe ranch and manages it in a very capable manner. The governor came to Arizona from New York nearly 40 years ago and engaged in the mining business from which he graduated into the cattle business some years later. He is a man of great vitality, is a dominant factor in Arizona affairs in general, drives his big high power automobile over the Arizona mountain roads for days at a time, and of all his many and varied interests he loves his Herefords best.

We started out to tell about the Hereford herd and digressed a bit to say something about the personality of one of Arizona's biggest men. The governor has been a frequent visitor to all the larger Eastern public Hereford sales the past few years and always brings home some of the good ones. The company has about 100 choicely bred cows and a number of high class herd bulls on the Tempe ranch in addition to a fine lot of heifer and bull calves. The Packard entry is a big prize winner at the state fair every year, and the Packard brand is scattered throughout the Southwestern beef herds, as he sells a large number of registered bulls every year. Governor Packard attended this year's California state fair and took an active interest in the cattle show and breeders' meetings and before he left Sacramento joined the Pacific Coast Hereford Cattle Breeders' Association. It is the plan of Cottrell and Packard to exhibit a show string at the Coast shows next year, and they will be a welcome addition to California exhibitions.

### RAISE THE HEIFER CALVES

Regarding the destruction of calves or rather the effort to secure greater conservation Prof. F. W. Woll of the state university says that the reason why so many calves are being wasted is that there is at present a great demand for casein and farmers get such high prices for their skim milk that they are loath to keep enough of it to feed their young stock.

But not only can calves be raised without feeding whole milk, but after two or three weeks they can be gradually changed over from a diet of milk to a gruel made of calf meal. Homemade calf meal is likely to be cheaper and better than commercial calf meal if the dairyman prepares it from standard suitable food stuffs such as ground barley, ground oats, wheat middlings, and linseed meal—two parts of any one of the first three feeds and one part of linseed meal. A new bulletin on "Feeding Dairy Calves in California" may be obtained free by writing Director of Experiment Station, University of California, Berkeley.

# Corn a White Man's Crop in Arizona

Written for California Cultivator By M. E. Bemis

**T**HE first white settlers in Arizona tried to raise corn, and each in turn gave up the attempt so far as making it a commercial crop was concerned. It is true that some truck gardeners and the Indians have raised corn more or less and with varying degrees of success. During the past few years there has been a marked improvement in corn growing, and it seems very likely that with continued improvement it will take its place next to alfalfa and cotton in acreage.

The prehistoric races who tilled the valleys of Arizona, New Mexico and some parts of old Mexico left in their ruined houses, particularly the cliff dwellings, ears of corn that might score high at a 1917 corn show.

So it is evident that corn has been grown here for centuries. There is a more or less legendary belief that the corn plant is a native of old Mexico, and since ethnologists tell us that the prehistoric races that once inhabited this part of the country were probably of the Maya race, which was supposed to have had its origin in old Mexico, it is therefore quite reasonable to suppose that corn was being

grown in our valleys during those days when many of our now quiet, peaceable mountains were lava spilling volcanoes and so corn in Arizona may be said to be literally "older than the hills."

for increased yields of 10 to 25 per cent both of corn and silage.

It is being demonstrated now that two crops of corn for silage may be grown on the same land in one season. Mr. C. W. Norton, manager, and with his brother, Dr. C. J. Norton, owners of the Norton Dairy Farm, were pioneers in the building of silos in this part of the country and this season they have filled one silo in July with corn planted in March, thus beginning a new era in dairy management in the Salt River Valley. This land was immediately planted to corn for the fall crop. This same plan was followed a few weeks later on the farm of the United States Indian school located near Phoenix.

One of the unique exhibits of Arizona at the International Soil-Products Exposition now being held at Peoria, Illinois (September 18-29), is a sheaf of corn planted in March and harvested in July, shown beside a sheaf of corn planted in July and cut immature September 10, but with stalks twelve feet high.

The most popular place for corn, however, will continue to be following grain or possibly after the second cutting of alfalfa on fields that need to be plowed up and renewed.

There are other varieties of corn which are being improved and which will prove of untold value to other sections of the state. Some years ago the state experiment station discovered some kernels of sweet corn in an ear of the Squaw corn grown by some tribe of Papago Indians. From these few kernels there has been bred up a variety of corn which has been given the name of Papago Indian sweet corn. On the Prescott experiment dry farm, elevation over 5000 feet, I saw this corn growing entirely without irrigation, and I should judge that it would make 12 to 15 tons of silage. At the same farm they are growing the Moqui Indian corn. These two varieties with further selection and improvement will enable the dry farmers to grow corn instead of the grain sorghums.

In the irrigated valleys, such as the

Some few years ago the govern-

Salt, Yuma and the Imperial in California, we have ideal conditions for corn planted in July, for there is the rich soil, warm sunshine and plenty of water. With the development of the Mexican June corn we have a variety adapted to the climate. What then is more logical than to suppose that corn will gradually take the place of the grain sorghums and that the acreage of corn will increase far beyond the present acreage of the so-called summer crops.

The nation's brood sows are needed in breeding pens far more than in pork barrels.

## BOYS! Make Money

and have fun TRAPPING  
Skunk, coon, fox, etc., are bringing high prices. Write for price list and our 36-page free book, TRAPPING FOR PROFIT. Tells how to trap, and how to handle furs to bring the most money.

Largest direct fur merchant on the Pacific Coast  
1121 Front Street  
Sacramento, California

## Shingles that last as long as the house

California Redwood shingles defy the attacks of sun, rain and changes of temperature. They resist wet and dry rot, and when properly laid make a permanently tight roof.

Since Redwood contains a *natural preservative*, Redwood shingles in their natural state will last a lifetime. If stained or painted occasionally, they will last as long as the house.

And since Redwood contains no pitch, it is hard to ignite, burns very slowly and is easily extinguished.

## California Redwood

Resists rot and fire

**FREE BOOKLET**—Don't build even a hen-coop until you are thoroughly posted on Redwood. Write for free booklet, "California Redwood on the Farm."

Please give us the name of your local lumber dealers. We want to be sure that they are fully supplied with Redwood to meet your needs.

**California Redwood Association**  
770 Call Building, San Francisco

Ask for the Child's Story of the "big trees" of California—there's a copy for every child in the nation.

## FRICITION!

That's what happens when the spindle and sleeves rub together—due to the microscopic roughness on all metal surfaces. But the powdered mica in Mica Axle Grease fills up this invisible roughness—makes a far smoother, cooler bearing, and the grease lasts twice as long.

**STANDARD OIL COMPANY**  
(California)

The Turkey---A Problem

Written for California Cultivator By Jean A. Koethen

IT TAKES some nerve when turkeys are bringing from 30 to 40 cents live weight to keep back the biggest and strongest for next year's breeders. Next year looks a long way off. The four or five dollars a good bird will bring is needed in a dozen places, and so off they go, and we trust that the kind Providence which takes care of fools and children will somehow provide suitable breeding stock for another season.

And when you speak of suitable breeding stock, how many of the folks who raise turkeys year after year (I don't mean professional breeders), do give any particular consideration to selection of birds which are really fit to produce hardy, quick-growing stock? Don't we always buy the cheapest and mate whatever we have regardless of age, size, relationship or vigor? It is foolish and in the end disastrous to breed from pullets. Eggs are largely infertile, poulters are small when they do hatch, an easy prey to blackhead in their infancy and usually undersized if they reach maturity. The breeding hen should be two years old and the largest and most vigorous hen of the flock. The breeding male should be at least one year old, or close to a year, and as near standard weight as can be obtained. Extremely large males are not the best breeders, but if large birds are wanted for an early market a good-sized male is indispensable. Careful breeders never use the same male two years unless they are able to mate him the second year to entirely new hens not related to the rest of the flock, or keep the original mating. There is no reason why the same pen should not be used two years in succession if they are in good condition, but mating sire to daughters or mother to son, as is commonly done with chickens, is a fatal mistake with turkeys.

It is not my purpose here to go into the cause, character or cure of the disease called blackhead which has been the ruin of the turkey industry in the East. Most careful study by experiment stations and other investigators has failed to find a complete explanation of its existence, but of two or three things we may be fairly certain. The most recent bulletin on the subject calls it "a disease of captivity, a disease of management." Wild turkeys are not subject to it. Domesticated turkeys, confined and fed as chickens are, almost inevitably develop it. The nearer the care of the young turkey can be made to approach that which it would receive if it were running wild in the woods with its mother, the more likely is it to survive. Range and freedom it must have. Exercise is absolutely essential. "When I was a girl," said a woman of 70 to me, our turkey hens used to take their broods off into the woods as soon as they were hatched, and we never saw them again till fall. Then they came back, and what splendid, fine birds they were!" Those turkey hens knew how to raise their poults, but who has learned the secret? What did they feed, how much and how often? Bugs and worms and tiny seeds and bits of vegetation, with sand and gravel for grinding must have been their fare, for there was nothing else. We may be sure that their food was not placed before them on a tray to be gobbled down as rapidly as possible. They had to hunt for it, exercising a little for every bit of food they swallowed, chasing bugs and flies, squabbling over choice mouthfuls. If they went to sleep hungry some nights they were up all the

earlier next morning and all the more eager in their search. The turkey hen never hurried her brood. Nobody stood over them, anxious lest they might fail to get every mouthful they could possibly digest, ready with a pill at the first suggestion of stomach-ache.

Inbreeding is blamed by some authorities for the prevalence of this disease. Wild birds never mate with their sons and daughters. That our domestic chickens can do it is only because of their thousands of years of domestication. Turkeys have only been known about 400 years and have been domesticated for a far shorter period than that. Indeed, they are not fully domesticated now, and that is just why our management fails. It seems probable that inbreeding began with the first attempts to domesticate them. Ultimately we may look forward to a race of turkeys as domestic as our chickens now are, but that can only be reached by more careful and intelligent management than the past has known. Then the turkey can

CALIFORNIA POULTRY SHOW

Modesto, December 5-8—B. L. Bissel, secretary.

Pasadena, December 11-15, L. W. Colby, Secretary, 779 Sunset Avenue.

Coalinga, December 28-January 1—Claude T. Walker, secretary, Coalinga.

Los Angeles, January 9-15 — Walter M. Ross, secretary, 224 W. Colorado Street, Glendale.

be made to produce more meat at less expense than any other fowl or animal.

The Thanksgiving turkey is usually of the variety known as Mammoth Bronze. Whether it is its great size or its beauty that makes this the most popular breed, the fact remains that it is. The White Holland and the Bourbon Red have their admirers and are excellent birds, probably no whit behind the Bronze except in size. The Narragansett was the popular breed in Rhode Island years ago, but seems less hardy here than the others. Slate and Black and Buff are kept more as curiosities than anything else. It would seem as if breeders might better concentrate on making the Bronze as hardy as it ought to be than spend their time developing other breeds, however excellent. One variety, immune to blackhead, would be more of an asset to turkey growers, and to the whole state and nation, than seven of doubtful vigor. When General Haig wishes to make a "smash," he concentrates. Why should not turkey growers do the same?

SCALY LEGS

This disease, if it may be termed such, often appears among our birds. It is easily cured and should not be allowed to let run as it rapidly spreads from one to the other. It is said that the best thing to use is an ointment composed of one ounce of sulphur and ten tablespoons of lard or vaseline. Rub this ointment well into the rough parts of the shanks and toes every other night for a week and the disease will soon disappear.

Food for our Allies is ammunition for the first line of defense.

LAYNE & BOWLER

PUMPS

THE WAY TO BIGGER CROPS

Next year will be the Farmer's greatest season in which to make money. Prepare to raise big crops. Be sure your irrigation facilities are adequate. Take no chances. Better install a Layne & Bowler Turbine Centrifugal pump and minimize your crop risk.

## Household Department

## THE INFANTRY

Give my love to the rank and file of the  
Regular Army men,  
Who can march all day and march all  
night  
And win a battle then.  
The seasoned soldiers hard as nails,  
The flower of the brave and free.  
For the good right arm of Uncle Sam  
Is the U. S. Infantry.

It's a long red road that the boys must go  
Where the bombs and the bullets fly,  
But the starry flag is their charge to keep  
Aloft in the sunlit sky!  
So my spirit follows the guidons gay  
And my heart goes over the sea  
With the footsore, dusty but dauntless  
men  
Of the U. S. Infantry.

It's the biggest hike that they ever took  
And the end is far away,  
Where the quick and the dead together  
sleep  
In dugouts scooped in the clay.  
But the first ones up and over the top  
In the battle front will be  
The olive drab and the slanting steel  
Of the U. S. Infantry.

—Minna Irving in New York Sun.

## WHAT SHALL I DO?

Written for California Cultivator  
By Ida M. Blake

"Vera Redfield you've lost your pocketbook, I heard it splash!" Vera laughed and said, "Oh, no it must have been a stone falling into the water that you heard. I'm sure my purse is safe in my pocket." But careful search failed to reveal the pocketbook and Vera's usually smiling face lost its happy look and she cried, "Oh, Helen what shall I do?"

You see it was the last day of the girls' vacation and they had taken the boat that morning for Block Island. The day was one of those perfect summer days of which New England can sometimes boast and the girls had enjoyed a delightful sail down to the island. It would be about an hour before the boat sailed so the girls went ashore and wandered out

on to the breakwater nearby to watch the waves roll in, which to both was great fun. But waves sometimes have a trick of taking a person most un-awares and this is just what happened now.

Vera, who usually kept her possessions hidden had this time carelessly left her purse in her lap and when an unusually big breaker came rolling in she jumped to get out of the way and the pocketbook fell down, down, among the rocks and sea weed.

"Why Helen, all my money, my return trip tickets, my keys, why they are all in that purse, why, whatever shall I do?" Helen, who was far from pessimistic, advised her friend not to worry. When it came time to go back to the boat Vera had made up her mind to tell her story to the purser and trust he would believe her.

The purser proved to be such a gruff appearing individual that she almost lost courage, but straightening her shoulders and looking the purser unflinchingly in the eye she told her tale of woe and almost like magic the ice melted on his frosty old face and he said, "All right, get aboard and I'll give you another ticket." "There," said Helen, "I told you not to worry and you see it always pays to tell the truth."

About ten days later after the girls had settled down to work and the incident was almost forgotten, a letter came for Vera from Block Island addressed in an unfamiliar writing. It read:

"Miss Vera Redfield, Dear Madam: Did you, while at Block Island lose a pocketbook? If so please describe contents. Yours truly, John Hammond."

When the purse reached its owner it was full of sand, but all the contents were safe and the little name and address card had done its duty.

## Old Bread

How California Women Make Use of It

**S**INCE the request by Mrs. A. S. in the Cultivator of November 17 for suggestions for utilizing left-over bits of bread many helpful hints have been received, which we give below.

For these suggestions we offer a three months' extension of subscription to the California Cultivator.

If you find these answers of value and have a problem you would like to lay before our readers, send it in and we will make the same offer for solutions to your difficulty.

First toast all left-over bread to prevent mold and place in glass jars for future use. Then use as crackers in your beefloaf, in soups, in heated tomatoes, etc. They will take the place of crackers anywhere you use them.—Mrs. L. E. Gillett, Holtville.

War Fritters—Soak odds and ends of stale bread in enough milk to cover. When the bread is soft add two well beaten eggs, one teaspoon baking powder and one of salt, enough flour for a batter. Bake as hotcakes on a well greased griddle. By substituting these for the breakfast hot cake, every ounce of flour is made to do its "bit" for the war.—Caroline M. True, Lancaster.

Spaghetti, French Style—Take two cups of spaghetti that is boiled tender in salted water. Grate one cup bread crumbs and brown in two tablespoons of butter. Place the spaghetti and bread crumbs in alternate layers in a vegetable dish and serve hot.—Bertha Dunlap, Willows.

Nut Loaf—Six tablespoons bread crumbs, one-half teaspoon salt, one-half cup or more of milk, one cup or more chopped nut meats, fine, two eggs. Season with sage, onions or parsley, form into roll and bake.—Mrs. E. A. Follensbee, Chino.

I notice a call for the use of stale bread, and as we love all dishes prepared from same will send some of our ways of using them. Every piece of bread, either brown or white, even

corn bread, is thoroughly toasted and run through the food chopper. (If one is lacking place on molding board immediately on taking from toasting oven and roll with rolling pin, which makes them quite fine. These crumbs will keep for some days and are always ready. One nice way of serving is to heat the crumbs in oven. If dripping pan is buttered and crumbs stirred a few times during heating process it adds to the flavor. Serve with sugar and cream for cereal.

A Meatless Dish—To a can of salmon add one cup bread crumbs, one cup of milk, stock or water. Mix well. Put a small piece of butter in frying pan. When well browned turn in the salmon. I use my pancake turner and turn by spoonfuls until the whole is pretty well browned, heap on center of platter, pour over it a cup of catsup, garnish with parsley. An egg or two adds to this but it's very nice without. Will serve about six.

A Meat Dish—About 15 cents worth of Hamburger, one cup of bread crumbs. Turn into frying pan in which has been heated a small piece of fat or butter. Stir and cook until all is well heated. Add a little water if not moist enough. In another pan fry a small onion, then add to it three good sized tomatoes, a little green pepper if liked, salt to taste. When thoroughly cooked add Hamburger. Cook all together a moment. Heap, mashed potatoes around outside of platter, turn meat into center. Bits of leftover meats can be used in the same way.

This is also nice with macaroni. Alternate in baking dish layers of well cooked macaroni and the Hamburger mixture. Add a few extra bread crumbs over top and a few dots of butter. Bake 15 minutes in hot oven.

Still Another—Brown a small piece of butter one-half the size of an egg. Pour over enough bread crumbs soaked in milk to serve six people. (If you have a rich meat broth the crumbs may be soaked in it and butter omitted). Add two eggs, turn in buttered pan and bake. Should be about as moist as thick cake batter. A Spanish sauce of tomatoes, onion and pep-

## Pictures from Home

OVER there, with thousands of miles of sea and land between them and home, are Our Boys, smiling and fighting—fighting with bullets, against a dogged foe; with smiles, fighting homesickness and dread monotony.

It's a part of the nation's job to-day to keep those boys cheerful, to hold fast the bonds between camp and home, to make light hearts and smiling faces—and these things pictures can help to do—pictures of the home folks and the home doings, pictures of the neighbors, pictures that will enliven their memories of the days before the war—simple Kodak pictures, such as you can make. These can help.

## The Cultivator Patterns

8575—Ladies' Matinee and Cap. Cut in sizes 34, 38 and 42 inches bust measure. The matinee is all in one piece. The pointed collar gives a pretty finish to the neck.

8571—Girls' One Piece Dress. Cut in sizes 8, 10, 12 and 14 years. This dress is to be slipped on over the head. A narrow shawl collar finishes the neck.

8603—Ladies' Long Waisted Dress. Cut in sizes 36, 38, 40 and 42 inches bust measure. The novelty is the center back closing, and the high collar with the flare about the face.

8364—Ladies' Waist. Cut in sizes 36, 38, 40 and 42 inches bust measure. The fronts of the waist are tucked as far as the bust line. The back is in plain shirtwaist style.

8372—Girls' One Piece Dress. Cut in sizes 8, 10, 12 and 14 years. The dress is made so that it can be opened all the way down the front. The back hangs straight from the shoulders.

8388—Ladies' One Piece Apron. Cut in sizes 36, 40 and 44 inches bust measure. This apron has the Russian side closing. The apron is in one piece from shoulder to hem.

8365—Ladies' Skirt. Cut in sizes 24, 26, 28, 30 and 32 inches waist measure. The front and back gores form wide panels and the sides are gathered to the slightly raised waistline.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

### HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 c) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

Pattern Department  
California Cultivator  
Los Angeles

per is nice served with this or any nice gravy. We often use an onion gravy as follows: Fry a good sized onion in a large spoon of drippings. When cooked blend with it a spoon of flour, add a pint of milk or water. Cook until thick. — Mrs. Fred Klahn, Orange.

### HOW TO SELECT FOOD

**T**HIS is the third installment in this series of articles. More are coming. We believe all are worth saving and keeping together. They should be read together to be of full value.

If the housewife will group the various foods in her pantry, vegetable bins, and refrigerator into five simple groups and will see that foods from each of the groups appear in each day's meals, she can feel sure that she is giving her family the different substances the body needs for well-being.

#### Group 1—Fruits and Vegetables

Without these the food would be lacking in mineral substances needed for building the body and keeping it in good working condition; in acids which give flavor, prevent constipation, and serve other useful purposes; and in minute quantities of other substances needed for health. By giving bulk to the diet they make it more satisfying to the appetite.

Foods depended on for mineral matters, vegetable acids, and body-regulating substances: Fruits; apples, pears, etc., berries, oranges, lemons, etc., bananas, melons, etc. Vegetables; salads—lettuce, celery, etc., green peas, beans, etc., tomatoes, squash, etc., potherbs, or "greens," potatoes and root vegetables.

#### Group 2—Meat and Meat Substitutes

These are sources of an important body-building material, protein. In the case of children part of the protein food should always be whole milk.

Foods depended on for protein: Milk, skim milk, cheese, etc., poultry, eggs, meat, fish, dried peas, beans, cowpeas, etc., nuts.

#### Group 3—Foods Rich in Starch

Cereals (wheat, rice, rye, barley, oats, and corn) and potatoes (white and sweet). Cereals come near to being complete foods, and in most diets they supply more of the nourishment than any other kind of food. It is not safe, however, to live only on cereals.

Foods depended on for starch: Cereal grains, meals, flours, etc., cereal breakfast foods, bread, crackers, macaroni and other pastes, cakes, cookies, starchy puddings, etc., potatoes and other starchy vegetables.

#### Group 4—Sugar

Unless some of the fuel is in this form the diet is likely to be lacking in flavor.

Foods depended on for sugar: Sugar, molasses, syrups, honey, candies, sweet cakes and desserts, fruits preserved in sugar, jellies, and dried fruits.

#### Group 5—Foods Very Rich in Fat

These are important sources of body fuel. Without a little of them the food would not be rich enough to taste good.

Foods depended on for fat: Butter, and cream, lard, suet, and other cooking fats, salt pork and bacon, table and salad oils.

Some food materials really belong in more than one group. Cereals, for example, supply protein as well as starch; potatoes supply starch as well as the mineral matters, acids, cellulose, and body-regulating substances, for which they are especially valuable; and most meat supplies fat as well as protein.

The groupings will help the housekeeper who wishes to save money or time to simplify her meals without making them one-sided or incomplete. For example, from these groups, the housewife who has been serving bread, potatoes, and rice or hominy in one meal, will see that one or even two may be left out without omitting any important nutrient. They will show her that a custard which is made of milk and eggs, two foods from group 2, would hardly be needed after a meal in which a liberal supply of meat had been served, and that a child does not need milk at the same meal with an egg or meat. It will suggest that baked beans or other legumes, or thick soups made of legumes, are substitutes for meat rather than foods to be eaten with meat.

## Why Not Save That Extra on Underwear?

It's really a startling eye-opener to see just what amazing value you can get when you buy Hanes Underwear. Read about the extra features over there in the illustration. Add 'em all up—then get this:

Hanes Winter Weight Underwear is made of fine, long-fibre cotton, snug-fitting, slightly and strongly made. Every seam is guaranteed unbreakable where the wear is greatest. It is springy and comfortable, warm and cozy.

Greatest Winter Underwear **HANES** Sold at Popular Prices

ELASTIC KNIT UNDERWEAR

Where can you get anything to touch that for downright value? Don't pay a high price just because you're used to paying it. Hanes is just the right price for everybody and the underwear everyone should wear.

### Here's the Big Specialty for 1917

A boy's union suit that combines the best features of the men's suits with a downy softness and cozy warmth just right for youngsters. Its value can't be duplicated anywhere.

Ask the Hanes dealer to let you see these two big underwear values. If you don't know him, write us. Don't let this chance slip by, but stock up against the cold weather by buying a half dozen suits before your dealer is sold out.

#### GUARANTEE

We guarantee Hanes Underwear absolutely—every thread, stitch and button. We guarantee to return your money or give you a new garment if any seam breaks on Hanes Underwear.

#### P. H. HANES KNITTING CO.

Winston-Salem, N. C.

Warning to the Trade—Any garment offered as Hanes is a substitute unless it bears the "Hanes" label.

Receipts past week, 1465 tons. The dry weather still continues with the result that interior demand is better and if cars were available considerable hay would move this way. As soon as these government contracts are cleaned up, which promises shortly, it is to be hoped that more cars will be furnished for general shipment. Many sections are waiting for rain before disposing of any of their stock, the farmers not caring to take a chance on being without feed should a dry season prevail.

Alfalfa is in good demand, especially in the country districts, with prices well maintained. Stock hay is extremely scarce and sells without difficulty. Large quantities of rice straw are being offered but owing to lack of transportation it is not interesting.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling must be added according to conditions.

Citrus Fruit Market

Los Angeles, Nov. 27, 1917.

Central California is shipping some of the first Navel of the season, the first out of Lemon Cove going on Wednesday the 21st. That car netted the shippers \$2500, which is the highest price ever received at that particular packing house for a car of fruit. Care is being used in sending out the first Navels, and as a matter of fact compared with other years but very few are being sent. Shipments of Valencia's will continue for some time, though there are less than 200 cars in the state to go.

Shipments

Shipments of citrus fruits since November 1, 1917: from Southern California, oranges 1563, lemons 222, total 1785; to same date last season, oranges 626, lemons 421, total 1047. Central California, this season, oranges 23, lemons 23, total 46; last season to same date, oranges 388, lemons 80, total 468. Northern California, this season, oranges 2; last season to same date, oranges 259.

WHEAT LANDS

The University of California is issuing a leaflet "Utilization of Idle Lands" For Wheat," in which is report of lands in various counties of the state, which are available for wheat production. San Luis Obispo County shows greatest acreage, 90,320; Modoc County, away up at the extreme northeast corner of the state, has 40,000; Santa Barbara County, 28,500; Yuba, 28,800; Glenn, 20,640; Madera, 23,000. Other counties all fall below 10,000.

The effort of the leaflet is particularly to call attention to these lands and secure culture for wheat if possible. The booklet says 200 persons have already made application for these lands. There are certainly enough of these lands so that the 90,000 acres increase asked for should be easily secured. Most of these lands can be leased on very easy terms though some are for sale at reasonable prices.

APPLY LIME

The use of lime agriculturally is increasing perhaps more slowly in California than in Eastern states. Many of our soils are supplied with lime, more perhaps would be benefited by its use. Illinois is the greatest producer, leading with 203,000 tons, Virginia is second with 146,000 tons, New York third with 102,000 tons. Other states using liberally are Pennsylvania 73,000 tons, Tennessee 66,000 tons, North Carolina 53,000 tons, West Virginia 47,000, Ohio 55,000 and Vermont 27,000. Since the figures of production were first compiled in 1911, the industry has steadily increased, and the output for 1916 is 1,066,376 short tons, valued at \$1,146,582, representing a gain of 512 per cent in quantity and 460 per cent in value for the six years. The increase for 1916 compared with 1915 was about 32 per cent in quantity and 28 in value.

In these times of high priced fertilizer it is well to consider the value of lime as an agent which will make available unavailable plant foods in the soil.

"T. B."

The department of agriculture is mailing a leaflet "Keep Costly 'T. B.' Out of Your Hog Lot," and in it is this statement; "Hog tuberculosis last year sent over 25,000,000 pounds of meat to the soap and fertilizer tanks." This is a lot of meat when people are hungry. Statement is then made that hogs contract tuberculosis chiefly from dairy cows.

See that all milk, especially all skim milk from the creamery, is pasteurized or cooked before it is fed to the hogs.

Keep your hogs from following dairy cattle unless the cattle are tuberculin tested. Keep them out of cow lots and barns and keep dairy drainage out of hog lots. Hogs can follow steers without much danger.

Give your healthy hogs a chance to keep healthy. Give them clean, well drained lots and plenty of fresh air, sunlight and clean water. Shelter them in well lighted and ventilated, sanitary hog houses. Keep the houses clean and use plenty of whitewash and disinfectants.

If there was tuberculosis in your swine last year it is safest to get rid of that herd, especially the breeding animals, and raise clean hogs from fresh stock.

As to sterilizing the old time open kettle or caldron may be used, and if buttermilk is secured from creameries the only safe course is that of boiling. It costs time and money, but the price of a car of hogs known to be largely tubercular is cut so severely that every effort should be made to save that loss as well as the direct loss of the diseased animals.

DON'T BURN THEM

The smoke of many a small fire is observed these fall days. It usually comes from the leaves which, instead of going to the mulch pile, are raked to the most convenient place and burned. This is actual waste that should be stopped. They are valuable in increasing soil mulch. Pile them with poultry manure, weeds, and all other refuse of the place, using some soil in addition, keep wet for a few weeks, and exceptionally fine potting soil or mulch is produced.

DRIVE MORE SLOWLY

Nearly a thousand people were either killed or seriously injured in the city of Los Angeles during the first ten months of 1917 in automobile accidents. By serious injury is meant injuries which result fatally or in loss of limb or at least in partial permanent disability. Besides this thousand, tens of thousands of others were injured in minor accidents. To be more exact the number of people killed was 118; the number seriously injured, 811. September proved the month of the greatest number of deaths, 18 being killed in that one month. July was second with 17 killed. These figures are secured from police records of the city, which give exact dates of every accident. For instance, during the month of January: On the first six were seriously injured, one killed; the second, ten injured, two killed; the third, six seriously injured; fourth, two, etc. Every day of the month had its accidents. In February four days escaped without any accidents whatever. They were the 13th, 18th, 22nd and 26th. Other months were about the same.

We have seen no total of the number of Americans killed since the beginning of the war in 1914, but we think this one city makes nearly as strong showing in ten months as all America in the more than three years of war.

We believe every one of those accidents has been investigated and so far as we have seen all drivers were blameless. We presume this record is not exceptional, other than that perhaps a greater number of automobiles are owned in Los Angeles than in any other city of similar size.

No one seems to have a suggestion as to how the number of accidents may be lessened, but it certainly appears that there is room for "a council of defense" amongst automobile owners and pedestrians. We should be protected from ourselves.

THE LARGEST HERD OF JERSEY CATTLE IN THE WORLD

Since Texas has the honor of being the largest state in the Union it is fitting that her industries should be in keeping with that reputation. She is a state of wonderful diversification, but probably her widest reputation has been made in the size of her cattle ranches and the number on her ranges and plains. It has been but a few years since dairying has been followed in Texas and in a comparatively short space of time she has forged to the front very rapidly.

Down in the Corpus Christi country near the Gulf there is a Jersey farm which has sprung into world fame, and so far as we know there is nothing like it anywhere. We refer to the Falfurrias Jersey Dairy Company, of Falfurrias, Texas, owned by Ed C. Lasater, one of the most prominent men in Texas and just now Hoover's man "Friday" in the national campaign for food conservation. Primarily Mr. Lasater is a beef cattle man, but he was the owner of enormous tracts of Texas land, much of which was too valuable for range purposes and which was valued at about \$20 per acre a few years ago, and a drug on the market. Being a farsighted business man Mr. Lasater saw the possibilities of his section of the country in the development of the dairy industry. With this in mind he invested hundreds of thousands of dollars in the establishment of what was to be the biggest thing of its kind in the world. After he had demonstrated the value of dairying the demand for farm lands grew rapidly until today it is one of the principal dairy centers of the state and land values have almost doubled.

When the reader is advised that the Falfurrias herd of Jerseys numbers 2900 registered animals and the grade herd 2000 head, that 10,000 tons of corn silage was stored in 50 silos this year, that 1400 pounds of the famous

Falfurrias Jersey butter is shipped daily and that hundreds of men are employed year in and year out, a faint idea of the magnitude of this concern can be had. There are 200 Register of Merit cows in this herd. Their yearly butter record averages 502 pounds to the cow. Twenty-five head average 770 pounds, and the highest record cow made 863 pounds of 85 per cent butter in one year. Falfurrias Jersey Dairy maintains a wonderful string of show yard Jerseys under the efficient management of B. R. Parrish, acknowledged as one of the three greatest showmen of dairy animals in the country.

We have seen and talked with a number of Jersey enthusiasts, but it is worth anyone's time to listen to this chap Parrish discuss Jersey pedigrees or watch him in the show ring. He has won so many championships at the principal American shows, including the National Dairy Show and the Waterloo Congress, that he cannot keep track of them. Before going with Mr. Lasater he showed F. J. Bannister's Lacina herd with great success. Falfurrias sends two or three different show herds out over the circuits every year. The expense is enormous but the advertising is valuable. The most remarkable feature about this herd of Jerseys and its owner is that prize winning males and females with high production records on both sides of their pedigrees, style, finish, etc., are priced at ridiculously low figures just to enable the ordinary farmer with limited means to secure this kind of stock.

This herd of Jerseys was the biggest sensation of the Arizona state fair this year. Of course it captured the bulk of the premiums as the stock was not only the best to be had but was in prime condition and exhibited by one of the best showmen in the country, it was a combination hard to beat. They uncovered a wonderful aged bull in Nobles Eminent Lad. He is well known to American breeders, having won grand champion at every show in 1913 as a two year old and sweepstakes the same year over every breed. Next year it is altogether probable that the Falfurrias herd will make the Coast circuit and give fairgoers here an opportunity to see this great herd.

AT THE GUARANTY SALE

Eight of the best individuals in the great Holstein herd of the Palo Alto Stock Farm at Palo Alto were selected by the committee of the California Breeders' Sale and Pedigree Company for the first guaranty sale, which is to be held at Sacramento December 5. With equally good selections from the herds of the other breeders consigning to the Sacramento sale it is destined to be an epoch marking event in the West.

An exceptional family offering is being made by the Palo Alto Stock Farm by sending Jennie Terzool Hicks 4th with her daughter, Alta Jennie, and her son, Palo Terzool Korndyke. Jennie Terzool Hicks 4th is a great producer of proven progeny with a record of 32.71 pounds of butter from 600 pounds of milk in seven days. For her ten months she will go over 21,000 pounds of milk and about 1000 pounds of butter. She has been in calf since May 22. Alta Jennie will be two years old in February and, like her dam, is in calf to King Pontiac Segis Korndyke. Palo Terzool Korndyke is by Rag Apple Imperial Korndyke, a son of Rag Apple Korndyke, who is the sire of the \$25,000 bull, Rag Apple Korndyke 8th, the sire of the \$53,000 calf.

A 35 pound bull is also being consigned from the Palo Alto Stock Farm. He is Funderne Soldene Pontiac Valdessa, born February 23, 1917. He was sired by King Valdessa, the highest record bull of the breed. The dam, Funderne Soldene Hengerveld, at three years made 486.6 pounds of milk and 35.33 pounds of butter in seven days and 2251 pounds of milk and 136.82 pounds of butter in 30 days—both world's records for heifer with first calf.

Other great individuals are Springdale Ononis Vale, 31.2 pound butter; Mousie De Kol Lady 2d, 24.48 pounds of butter; her daughter, Mousie De Kol Imperial, and Rosabel Korndyke, who has a record of 23.15.

BOOSTING DEPENDABLE IMPLEMENTS

The Arizona state fair stimulated the sale of California made farm machinery. One firm, Whyman Machinery Company of Phoenix, has sold since the fair, nine eight-foot double disks, three subsoil plows, and six heavy chisel cultivators made by Killefer Manufacturing Company of Los Angeles.

ALFALFA LAND FOR DAIRYING

Leveled, checked and in stand of Alfalfa. Also first-class Orchard, Bean and Sugar Beet land, with plenty of water for irrigation. For sale in tracts of 20 acres and up.

Sixty Three Miles from San Francisco in Contra Costa County. For Prices and Descriptive Matter Address  
BRENTWOOD IRRIGATED FARMS, BALFOUR, GUTHRIE & CO., LAND DEPT., 350 California St., San Francisco

## A New Idea in a Small Tractor Plow Outfit

**Y**ou can now get a small Avery 5-10 h.p. Tractor with a special hitch and lifting device and use your old horse plow.

Attach your plow to the drawbar and connect the lifting chain and you have a complete tractor plow outfit. If you have hilly ground and want to use both right and left hand plows, attach them as shown here. You can raise and lower the plow without getting off the tractor. With the plow raised you can back up in short spaces easier than with horses.

This tractor is just the size for doing all the work on small farms or for light work on larger farms. The price is the lowest of any tractor built.

There is a size Avery Tractor to fit every size farm. Six sizes in all—from this small 5-10 h.p. up to a large 40-80 h.p. There is also an Avery Tractor Plow in light and heavy styles to fit every size tractor.

Avery Two-Row Motor Cultivator

Avery "Yellow Kid" Thresher

## Motorize all your farm work with an Avery Tractor and Motor Cultivator

Do your cultivating with motor power. The Avery Two-Row Motor Cultivator makes it possible for one man to tend 100 acres of corn. It will also cultivate cotton and other row crops. By getting a special planter attachment you can plant your crops with the same machine. You can use it too for many other kinds of light field and belt work.

Only with modern Motor Farming Machinery is it possible for you to raise the largest crops and to save them after you

raise them. Here is an ideal Motor Farming Equipment—an Avery Tractor and Plow to prepare your seed bed and plant and harvest grain crops—an Avery Two-Row Motor Cultivator to plant and cultivate your row crops—and an Avery Thresher to thresh your grain crops.

The AVERY is the most complete and up-to-date line of Motor Farming Machinery built. Write today for complete catalog and ask for special information about the machinery you are particularly interested in.

# Farm for Profit

## and Help U. S. Win the War

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from the proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

## MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent, produce to the limit. Fertilize your land—the increase in yield and price of crops will more than pay all the fertilizer expense—it will enable you to farm with profit. Don't spend your time working worn out land. Make it pay—Fertilize with Hauser's Organic Fertilizer.

## The Garden Beautiful IN CALIFORNIA

by Ernest Braunton

is a thorough treatise on soil preparation and cultivation and general care of flowers, plants, ornamental trees and shrubbery. Its 14 chapters with half tone and line illustrations and binding in silk make it a work that every home should possess.

\$1.00 Postpaid  
\$1.75 with Cal. Cultivator one year, Cultivator Pub. Co., 115 No. Broadway, Los Angeles, Cal.

### A California Cultivator Subscription as a Christmas Gift

If you wish to make a very appropriate Christmas gift to some California friend interested in California's greatest industries—fruit growing, farming, dairying, stock raising, etc., why not send the California Cultivator for one year, 52 big interesting numbers? It will be a gift read and appreciated many times after most other Christmas gifts of equal cost are laid aside and any number will bring new inspiration and helpful suggestions to anyone you remember. The subscription price is \$1.00 per year. If requested we will send an appropriate Christmas card just previous to Christmas to whoever you may designate, giving the name of the sender and the date to which the subscription is paid ahead. Send all orders and make remittances payable to CALIFORNIA CULTIVATOR, 115-117 NORTH BROADWAY, LOS ANGELES, CAL.

## Boys! Will You Work for a \$290 Motorcycle?

We are going to give away a \$290 Thor Motorcycle, a \$125 Miami and many other valuable prizes including Cash Pay, December 31, 1917, to those who answer this advertisement and do a little work for us that will be easy to do. Eleven motorcycles have been given away that were easily and quickly secured by our easy plan. This is the easiest way to get one. You do not have to pay any money or obligate yourself to do anything. Fill in the blank below and we will write and tell you all about it.

California Cultivator,  
115-117 North Broadway, Los Angeles.

Please tell me about the \$290 Thor Motorcycle and other prizes you will give away.

# REO

## The GOLD STANDARD OF VALUES

### Salient Features of The Reo Six

50 HORSE POWER, Six cylinder motor cast in threes.

REO DESIGNED, Reo made—as are also all other units including body and top.

126 INCH Wheel Base.

CANTILEVER rear springs—Semi-elliptic front springs.

FULL FLOATING rear axle.

TIMKEN BEARINGS throughout.

NOISELESS spiral-bevel driving gears.

REO ONE-ROD centre control.

HYATT QUIET bearings in transmission—at all points.

MULTIPLE Dry-disc clutch.

BOTH BRAKES operated by foot levers and provided with ratchet locks. Extra large and both operating on rear hubs. No hand brake.

CLUTCH AND SERVICE brake are interconnected.

TWO UNIVERSAL Joints in drive shaft.

TORQUE SHAFT relieves driving mechanism of road stresses.

SUB FRAME carries motor and transmission.

EXTRA LARGE—and round—spokes in wheels.

OVER-SIZE TIRES—34 in. x 4½ in.

ONE PIECE drop forged front axle.

PERFECT LUBRICATION system at every moving point.

REO RADIATOR—Reo designed, Reo made.

REO-REMY Electric Starting, Lighting and Ignition system.

REO STEERING GEAR—exclusively Reo. No back-lash—self adjusting for wear. Positive.

MOTOR BEARINGS—even main crank-shaft bearings—adjustable from the outside.

50 PER CENT OVERSIZE in all vital parts—crank-shaft, axles, driving shafts, gears, frame, wheels, tires.

PRICE IS F. O. B. LANSING AND THE SPECIAL FEDERAL TAX MUST BE ADDED.

## But The Final Answer Is—Upkeep

IT'S ALL RIGHT to exploit the speed possibilities of a car.

IT'S PERMISSIBLE to extol its wonderful "pick-up" and acceleration.

IT'S PERFECTLY PROPER to prove by any kind of stunt you choose that it will climb a hill, though nobody doubted its ability in any one of these directions.

DEMONSTRATIONS of power and of prowess; feats of endurance; and spectacular performances of a momentary nature are legitimate.

BUT AFTER ALL what do such freak tests prove as to the actual staying qualities of the car?

AND ABOVE ALL, what do they prove on the very subject in which you are most interested—cost of upkeep over a long period of years?

WE COULD AN' IF WE would, write a volume—yes a library—on the subject of performance of this Reo Six in all phases of automobile activity.

WE COULD TELL YOU, not of one, but of scores of Reo Sixes that have crossed the continent, with all the feats of mountain climbing, and trail following as well as of speed and mud plugging that trip entails.

BUT WE DON'T consider that important. To a Reo it is about as difficult as is your daily journey to the barn.

WHAT WOULD IT PROVE? Nothing.

BUT WHEN OWNERS say that this Reo Six costs less, year in and year out, for upkeep—repairs and replacements as well as gasoline and oil and tires—than any other six of equal size and power with which they have had experience—that does prove something.

IT SHOULD INDICATE to you that a Six so built must be capable of any feat or test that any sane owner would ever call upon his car to perform.

AND THAT IS THE FACT—ask any Reo Six owner.

YOUR ORDER should be placed at once if you would secure a Reo Six of present quality and at the present price.

JANUARY FIRST there will be a substantial increase in price of this Reo Six—increased cost of materials and of manufacture render it impossible longer to make this car at this price.

SO ONLY ORDERS for delivery prior to and including December 31st will be filled at the present price.

SEE YOUR REO dealer at once. Place your order and obtain what is veritably a gold dollar for ninety cents.

## Pruning of Prune Trees

Prof. Leroy Anderson Tells of the Taylor Method, Which is Followed in Many of the Santa Clara Valley Prune Orchards

**I**T is often said that there are as many ways to prune as there are pruners. Each grower has an idea as to the manner he would like his trees pruned in order to bring the most fruit, and although there may be many such ideas yet the results obtained in the appearance of the trees do not vary greatly. What variation noticed consists chiefly in a greater or less thinning of the branches. In the Santa Clara valley the predominant form is the long willowy branch bearing as many side branches as the grower has thought best to leave on. The number and proximity of main branches will permit to live. Since the vast majority of prune growers follow this method one would reason that it must be the best method for producing fruit.

However, there is another method used for several years by Mr. Amos Taylor of Cupertino. Mr. Taylor swears by his system as being the best, i. e., he would if he were a pruning man—which he is not. My object in penning this little story is to describe his system as relating to the renewal of life in mature trees, for it is in that line that the system has come under my observation. The essence of it consists in end clipping or clipping the new growth in such a way as to induce a marked increase in growth.

Let us assume a tree that has made little new growth and has a "sick look"—some branches even showing a dying tendency. The weaker branches are removed entirely, cutting them back to the body of the tree or to the next healthy branch. Then the end clipping begins. Cut each leading end branch to a strong side branch, preferably one that has made a little new growth. Then cut off the new growth on the side branch—if the main branch is very weak, leaving only one or two buds of new growth. This branch probably has several other laterals, and if so the tip of each one is also cut. The principle is, the weaker the branch or the tree the more end branches are clipped, for thus will a greater flow of sap and greater growth be induced. The whole tree is gone over in this way, the weaker branches getting the more clipping and the stronger branches the less. Small hand clippers are the best shears to use, in fact, in this kind of pruning there is little call for the long handled shears. The time of pruning is laid down by Mr. Taylor as between October 20 and February 20, with a preference for the earlier season, or as soon as the leaves have fallen. End clipping is slow work at the best and if the leaves are not fallen it is impossible to make any speed. With practice a pruner becomes proficient and can clip very rapidly, especially if he is able to make quick decisions and has eyes good enough to see where the live buds are. The clipping should be done to a leaf bud.

The following season a marked

Detail as to Cutting

Figure 1—a branch in 1917 showing where it was cut in 1916 and the growth it made in 1917.  
Figure 2—The same branch as in Figure 1 after being clipped. The lower branch was removed, the one at the right cut back to three or four buds, the one to the left of it removed entirely leaving a fruit spur which it hid in Figure 1. The two short laterals were not cut.

Appearance of Trees

Figure 3—A typical Taylor pruned tree. Note its density and the absence of the usual long willowy branches. Photographed November 10, 1917.  
Figure 4—Another Taylor pruned tree. Not so dense as Figure 3, but still having an abundance of new growth. Photographed November 10, 1917. These illustrations are used by courtesy of Eaton & Company, publishers of a book on the Taylor system of pruning.

change is usually seen in trees thus clipped; the new growth shoots out at the ends of all the clipped branches and continues vigorous during the

growing season. To insure the vigor of the tree it is well to clip again the next fall. Possibly only half as many ends will need to be clipped as on the

previous year. Some parts of the tree will have become too thick and will need a little thinning. In thinning be consistent; cut the branch back to its major limb instead of cutting it in half. If cut only partly back, be sure to clip the end of the laterals still remaining and by this means keep life in the branch. The third season no clipping may be necessary, only a little thinning. However, this system permits a thicker growth than the usual method of pruning. So long as there is life and vigor the branches may be rather close. See Fig. 3.

It is evident that the Taylor system is renewing the life of the tree continuously. Some growers renew the tree periodically by means of "suckers" which are nursed along in the center of the tree, or out on a main branch, and when the sucker is big enough the old branch is cut off and the "sucker" tries to take its place. In the system here described there is no place for "suckers" except a rare one that may be coaxed into bearing fruit spurs. The main branches are kept full of life by always having them carry vigorously growing branches. The apricot affords an illustration of the effect of end clipping when carried to an extreme. Each year a tremendous new growth follows the severe pruning. Clipping on the prunes is mild in comparison, yet bears results in proportion.

Since prunes are borne on two year old wood, there is no fruit on the ends of the branches in this system as in the willowy system. A tree may have a big load of fruit and scarcely any of it visible from the outside, for beyond the fruit is two years of new growth. This would seem to be better than having it on the ends of the branches in the sun, especially if the mercury runs up above 100 degrees in the shade.

A portion of my orchard has been pruned by this system for two seasons, in the fall of 1915 and in 1916. Results have been marked in the tree growth. The trees suffered much in the dry season of 1912-13, and this pruning has helped bring into new life those which were not strong enough to come otherwise. As to fruitage, there is as yet no positive evidence. One block of trees, mostly young, about one and a half acres, has been pruned by this system and yielded as follows during the four years I have had the place. The weight is in green fruit as picked: 1914, 3619 pounds; 1915, 2708 pounds; 1916, 6828 pounds; 1917, 6223 pounds.

A block of 20 acres which bore in 1916, 135,147 pounds, bore only 61,286 in 1917. About one-fourth of this block had been pruned by the system in 1915, the 20 acres had less than half as much fruit as in 1916, while the one and a half acres had about 10 per cent less. The reader may say it was the pruning. I am not ready to say so, but I am convinced that the system is a good one to put new life into trees. Its use would be scarcely required under ample irrigation or heavy fertilization, or both.

## Beet Sugar Production May Decrease

Serious Situation in California, Which Some Predict Will Mean Less Than Fifty Per Cent of Last Year's Output Unless Justice is Done the Growers

**S**OUTHERN California has been the scene, during the past two weeks, of one of the fiercest battles of the food campaign. Owing to the shortage of labor, to a season which was not one of the best, and to the price paid for beets during the sugar run just closed, many a sugar beet producer is facing ruin.

Some have asserted that this is because of his own ill management. It

may be in certain cases, but as a general thing it has been almost impossible for even the careful grower to get his money back. These growers have fully decided to raise beans, cabbage or other crops another year. Meanwhile the nation is clamoring for sweets. The growers have appealed for relief.

District Attorney Woolwine of Los Angeles, one of the larger beet producers, has appealed for relief.

# The Food-Value of Oranges

SUCH a fruit as the orange, no matter how highly esteemed, is not generally regarded as valuable for its nutritive qualities. This point of view, we are told by Dr. J. H. Kellogg in Good Health and quoted in Literary Digest, is a mistaken one. Orange juice is a good food and will bear comparison, bulk for bulk, with many others whose nutritional value is undoubted. For instance, Dr. Kellogg tells us, a pint of buttermilk has a food value 25 per cent less than a pint of orange juice, and a pint of oysters falls short in about the same degree. Even full milk is not much more nutritious, a pint of orange juice having about the same number of food units as three-fourths of a pint of milk. When we consider that, besides this actual food value, orange juice has much else to commend it, we see that oranges on the bill of fare are worthy of all respect. Writes Dr. Kellogg, in substance:

"It is a surprise to discover how universal is the craving for fruits. Even the carnivorous Eskimos, who of necessity subsist chiefly upon animal foods, do not neglect to improve the opportunity afforded by their short summer season to gather and feast upon cranberries and other small juicy fruits which manage to survive the bleakness of the polar region.

"We who live in a more favored clime find in the orange and other citrus fruits an abundant supply of the most delicate and wholesome of all food acids. The sugar of the orange, like its acid, has the advantage that it is prepared for immediate assimilation and requires no digestion. It does not need to pass through the digestive organs except for the purpose of dilution. It is to the sugar which it contains that the orange owes its chief value as a source of nutriment, although it contains, in addition to the sugars of soluble carbohydrates, nearly one per cent of protein. The combined value of its food constituents amounts to 240 calories, or food units, per pound—a value which will be best appreciated by comparison with other similar foodstuffs.

"Thus, while the orange is always a grateful addition to any ordinary bill of fare, it also has nourishment qualities to highly commend it."

In addition, Dr. Kellogg goes on to say, the orange has great value as a food adapted to certain grave conditions of disease, although its virtues in this respect are little appreciated by the public and far less often utilized by medical men than they deserve. Here are a few of its medical uses, as set forth by the author:

"As a food in fever cases, nothing could be more perfectly suited to requirements of the patient's condition. The fever patient needs water to carry off poisons which are burning him up and against which his cells and organs are struggling. Four to six quarts of water are needed daily to quench the fever's fires and aid elimination through the skin and kidneys.

"Orange juice supplies the finest sort of pure, distilled water, absolutely free from germs or foreign matters of any sort. The grateful acids furnish aid in satisfying thirst, and the agreeable flavor makes it possible for the patient to swallow the amount needed. The intense toxemia from which the fever patient suffers coats

his tongue and often destroys his thirst for water as well as his desire for food. The agreeable flavor of orange juice aids greatly in overcoming this obstacle.

"Another special and valuable property of orange juice is the small amount of protein or albuminous matter which it contains. Fever patients have little gastric juice and very small digestive power, and so need to take food which is ready for absorption and immediate use. Foods poor in albumen are also needful in fevers, because they do not leave residues to undergo putrefaction in the colon, as do meat, eggs, and numerous other foods.

"Another class of cases in which orange juice is almost indispensable is found in those most unfortunate and suffering of mortals—the bottle fed babies. Usually fed on pasteurized or sterilized milk, these unhappy little ones seldom fail to show marked evidence of malnutrition. They are, indeed, not infrequently victims of scurvy, rickets, or pellagra. The investigations of Funk, McCollum, and many others have shown that the em-

aciation, weakness, arrest of growth, and general malnutrition in such cases are due to absence from their food of the essential 'vitamines.'

"A few years ago the fortunate discovery was made that orange juice contains elements needed to supplement the bottle fed baby's dietary, resulting in immediate resumption of growth and a speedy return to health. This remarkable transformation may occur, not only in human infants, but in young animals upon whom the orange juice feeding experiment has been oft repeated.

"The diet of the average man, made up chiefly of white bread, meat, and potatoes, is decidedly deficient in 'vitamines.' Orange juice is needed to supplement these defective dietaries and might, with the greatest advantage, find a place on every table at least once a day.

"The acid of orange juice and the sugars it contains aid digestion by stimulating the gastric glands to increased activity. It is also an appetizer of the first quality.

"A glassful of orange juice before breakfast has a decided laxative effect with many persons. Sometimes it is advantageous to take a glassful of orange juice at bedtime as well as in the morning."

## Mottle Leaf

I have read Mr. Myer's idea of mottle leaf, and I agree with him in regard to its prevention, except that he did not give his method of cultivation.

Being an owner of an orange orchard for nine years I have come to the following conclusions in regard to care of an orchard in this vicinity, Hemet. I sow vetch about the 15th of August, irrigating it every two or three weeks as it demands it. I then add 800 cubic feet barnyard manure to the acre. About June (according to growth of vetch) I take a plow in and plow my orchard (when I say plow, I mean plow, not scratching the ground) close to the trees. I plow about five inches deep. After the third round I let "her" down and plow as near a foot deep as I can, then level it when the vetch is decayed and proceed with my irrigations as the ground needs it.

Results: Along last August, six weeks after I had irrigated, on an 18-inch test the dirt could be mudded by

working it in your hand. A visiting soil chemist said that I was holding too much water in my orchard, but am I? My orchard lies surrounded by orchards where shallow cultivation is practiced. These orchards are full of mottle leaf; they won't grow a cover crop because they won't allow a plow in there to plow, while my orchard shows practically no mottle leaf at all. One of these shallow cultivators asked me if I was to go to his house for dinner where would I expect to get it, at the house or the barn? I said it made no difference as long as it was brought to me. Just so my experience and observation is, bring the fertilizer down to the roots, watch your evaporation, harrow, harrow, and then harrow again, give it 50 pounds nitrate to the acre a year. You won't have to use a mulch to keep out mottle leaf.

Some say, "O, don't break those surface roots off." That in my opinion is the secret of the whole affair; drive the roots down and carry the fertilizer down to them.—C. R. McAdams.

## Calol Fuel Oil for Orchard Heating

The prevention of injury by frost is now a recognized insurance for orchardists. The principle of frost prevention is to raise the temperature of the atmosphere surrounding the trees to just such a degree that the water contents of the fruit shall not freeze and expand, breaking the minute cells of the fruit, and rendering it unfit for marketing.

One of the commonest methods, and perhaps the only successfully practical method that has been used up to the present time, is by the use of oil in orchard heaters. The oil to be used in this work is one that will be fluid and readily handled at freezing temperature. For economical use the oil should contain the greatest number of heat units per gallon or per barrel compatible with the above conditions. Calol fuel oil is fluid at freezing temperature, and is readily handled. It has been standardized for this purpose.

An orchard heater should be designed to use the fuel oils that are

standardized in the market at the present time, and should not seek to impose a special specification for the particular heater in use, as this would logically mean a separate specification for each particular heater. It should also burn the oil practically smokelessly and should be able to burn all the oil and not only a portion of it.

A fertile soil must be sweet, not acid, and well supplied with organic matter and humus. It must have a suitable texture and tilth—a favorable environment for the plant roots. The necessary bacteria which have to do with soil activities must be present and conditions favorable for their growth and multiplication. The soil must be properly aerated and have a sufficient supply of soil moisture which includes proper tillage, irrigation and drainage. All of these factors and others must be associated in a careful systematic plan of soil management in order that the land may be fertile and produce large crops.

Winchester Model 12 hammerless  
Shotgun, 20, 16 and 12 gauges

## Why the 20 Gauge is Gaining in Popularity

Back in the '90s the 10 gauge was the weapon that had the call among American sportsmen.

But as the game became scarcer, there came a better sense of sportsmanship. The 10 gauge yielded to the 12 gauge.

Today, hunters who are in it for "Sport's Sake" are taking to the light 20 and 16 gauges—the true sportsman's guns.

When you carry a 20 gauge, you're *playing the game* and you *earn* every bird you bring down.

### Quicker action and better pattern with the 20 gauge

In the hands of a good shot, the 20 gauge has proved almost as effective a field gun as the 12 gauge. This is because in the first place, being lighter, it permits of quicker handling; you get onto your game faster.

Then, too, if you're quick, most of your shots at quail, snipe and prairie chicken will be at from 15 to 25 yards; at these distances the properly bored 20 gauge makes its best pattern, while the 12 gauge does not open up so as to give the shooter the full benefit of its larger load of shot until close to 40 yards.

The 20 gauge then can give you as good a bag as a 12 gauge if you handle it fast and get onto your game quickly. It's a sportier gun to work with.

A gun that few sportsmen can resist

The nicely balanced Model 12, Winchester 20 gauge with its slim, graceful barrel is a beautiful weapon and has a fascination about it few sportsmen can resist.

Quick feeder, sure ejector.  
Throws empty shell to the  
side out of your way.

Dense, even, hard hitting,  
quick opening pattern of  
the Winchester 20 gauge.

It works smoothly in whatever position it is held.

A man who has used this Model 12, 20 gauge Winchester; or its duplicate in the Model 97, 16 gauge—for those who prefer a hammer action gun—for a few days of shooting, finds it hard to go back to his heavier 12 gauge.

### The barrel is the gun

Men who know guns realize that the accuracy and durability of a gun lie in the barrel. On the quality of the barrel depends the quality of the gun. There is absolutely no difference in the standard of quality of the barrels on the highest or lowest priced Winchester guns. With Winchester the barrel is the gun and the single standard of quality has been attained only by the most unremitting attention to the boring, finishing and testing of the barrel.

### The Winchester barrel

The barrels of the Winchester Models 12 and 97 have been scientifically bored to micrometer measurements for the pattern they are meant to make. The degree of choke exactly offsets the tendency of the shot to spread. Until the pattern proves up to Winchester standard, the guns cannot leave the factory.

The Nickel Steel construction preserves the original accuracy forever. The Bennett Process, used exclusively by Winchester, gives the Winchester barrel a distinctive blue finish that, with proper care, will last a lifetime.

What  means

This mark on the barrel means *Viewed and Proved Winchester*. This stamp stands for Winchester's guarantee of quality, with fifty years of the best gun-making reputation behind it.

Every gun that bears the name "Winchester" and that is marked with the Winchester Viewed and Proved stamp has been fired many times for smooth action and accuracy, and with excess loads for strength. At every stage of Winchester manufacture machine production is supplemented by human craftsmanship. It is a *test and adjustment process*.

It is this care in manufacturing that has produced in these two light gauge models, guns that have won the admiration of all true sportsmen who follow *Sport for Sport's Sake*.

### Write for details of Winchester shotguns, rifles and ammunition

The Winchester catalog is an encyclopedia on shotguns, rifles and ammunition. Every hunter should have one. It gives detailed specifications of the Model 12 and describes at length the principles on which every one of the world-famous Winchester rifles and shotguns is built. Write today. We will mail you a copy free, postpaid.

WINCHESTER REPEATING ARMS CO.

World Standard Guns and Ammunition

## Why Weber Wagons Last Longest

A farm wagon is used oftener and expected to stand more downright abuse than almost any other article of farm equipment. It is out in the weather most of the time and receives little if any care and attention. At the same time, it is expected to be in good condition when wanted.

To withstand treatment of this kind, and to give satisfactory service, a farm wagon must be properly made of the right material. Material and workmanship determine the service a wagon gives, and service not price determines its value to the user.

The wheels, gears, and boxes of Weber wagons are made from selected, properly seasoned A-grade material, well ironed, braced, and properly painted. The International fifth wheel is a new exclusive feature. It has proved to be one of the best improvements ever made on farm wagons because it overcomes bending or breaking of the king bolt and circle iron by effectively distributing the strain of the load.

So far as material and general appearance go, all farm wagons look more or less alike unless studied carefully. The dealer handling Weber wagons in your locality will be glad to show you the points wherein the Weber is superior. If your dealer cannot show you a Weber wagon, drop us a line.

## Income Tax

Written for California Cultivator

FOR several weeks we have referred to the income tax and the necessity for the farmer to keep his accounts with an idea of securing justice for himself and for the government in making out his Return. However, this week we will confine the discussion to what income is and give a quotation from the Weekly Eagle of Wichita, Kansas, on this particular point. The discussion another week will be along the line of "Just What Are Expenses." Under this we will discuss "Losses as They Affect the Net Income."

First however we will make

### Correction

That is, regarding statement we made as to war stamp tax, and this correction may involve the saving of a cent now and then. We stated last week that it was necessary to put a war stamp on every package, even where less than 25 cents postage was required. This should have read "Parcel-post packages: Upon every parcel or package transported from one point in the United States to another by parcel post on which the postage amounts to 25 cents or more, a tax of one cent for each 25 cents or fractional part thereof charged for such transportation, to be paid by the consignor. No such parcel or package shall be transported until a stamp or stamps representing the tax due shall have been affixed thereto." In other words, under 25 cents it is not necessary to attach an internal revenue stamp. Bear in mind however if it is above 25 cents and the war stamp is to be attached, it must be the special internal revenue war stamp.

### What is Income?

Income is defined by the government as gains, profits, salaries, wages, commissions, money or its equivalent from professions, vocations, business, trade, commerce, rents, sales or dealings in property, both personal and real, and interest, except interest from bonds or obligations of the United States or any political sub-division thereof; also dividends, profits or income for services as trustees, guardians, executors, administrators and receivers; also partnership gains or profits, bonuses, patents, franchises, pensions and royalties on oil or gas wells; and income from all sources whatsoever.

It will be noted that this last phrase, "Income from all sources

whatsoever," as well as from the specific sources of income named in this paragraph above just about covers every possible bit of worldly goods that a citizen of the United States can get, and that is just the intention of the government. The farmer will find that some one or more of these words or phrases will cover just about everything that he has taken in during the year. All products of the farm sold, traded or exchanged for cash or the equivalent of cash must be accounted for as income, such as milk, butter, eggs, chickens, horses, cattle, hogs, sheep, grain, hay, fruit, vegetables, wood, timber, pasture, rent, etc. Products traded or exchanged for other products, such as groceries, or dry goods, must be returned as income for the value received. Groceries used in family and living expenses, therefore, cannot be deducted. Any thing sold, that has been purchased, is accounted for as profit or loss by deducting the price paid from the price received. If real estate is sold, the farmer must report as profit or loss the difference between the price paid (less amount of deferred payments) from the selling price. If purchased before the beginning of the income tax law, March 1, 1913, then subtract the fair market value of the property on March 1, 1913, from the selling price. The difference will be the profit, income, or loss for the year in which sold.

### Things Equivalent to Cash

Insurance received for damage or loss of anything raised, or produced on the farm must be reported as income. It is income, for the reason that it was converted into cash to the amount of the insurance received. The farmer sold his produce for the amount of the insurance. Rents, or partnership shares for rents, paid in products of the farm instead of cash, must be reported as income for the amount of the value of the products at the time paid. When grain, or any other product of the farm is held over from another year, like holding wheat over for a better market, when it is sold, it must be accounted for, as income in the year sold, and for the full amount of the price sold or exchanged. The farmer cannot deduct in this year's report any cost or expense incurred whatever in producing the grain, or other product produced in a former year, as all expenses and costs incidental thereto belong only to the former year or years producing same, and not to the year in which it was sold.

## Thrift Savings---Savings Certificates

Written for California Cultivator

THRIFT stamps and the war savings certificates are out and may be purchased at post offices and banks. Many stores are also keeping stamps for sale.

The thrift stamps are true to name in that they are an inspiration to every one who buys one to get others to add to it. When you buy a thrift stamp you will want a "United States Thrift Card." This card is issued by the treasury department and has place provided on it for 16 twenty-five cent stamps. When filled, the card, with 12 cents, during the month of January may be exchanged for one \$5.00 war savings certificate. That is, during the month of January it is worth

\$4.12; during February, \$4.13, and so on until January 1, 1923, when it will be redeemed for its full face value, \$5.00.

On the face of each stamp is: "Thrift Stamp Twenty-five Cents. Good in payment, toward U. S. War Savings Certificate," with the signature of W. G. McAdoo. On the thrift card in the 16 places for the stamps are various sentiments such as: "Your second stamp here"; "If you want to succeed, save"; "A penny saved is a penny gained"; "All fortunes have their foundations laid in thrift."

As noted, these 16 stamps, plus 12 cents, during the month of January, and one cent additional for each

month thereafter until December, 1918, may be exchanged for a United States War Savings Certificate which has place for 20 of the five dollar certificate stamps. This, if kept until January 1, 1923, becomes worth \$100, providing every space is filled. It is not necessary, however, to have all spaces filled in order to validate a certificate.

The "cash surrender value" month through the five years is given on the face of the certificate, and while not so profitable if surrendered before the completion of the five years it is a great convenience where one wishes to secure immediate funds. The interest paid amounts to about four per cent where the certificate is carried to maturity. No one person may have to exceed \$1000 in these certificates.

Of course one may buy the war savings certificates without purchasing stamps. However, get a thrift card and form the habit.

#### LEAGUE ENDORSED

The following resolution, passed by the 50th Fruit Growers' Convention at Sacramento, speaks for itself:

Sacramento, Cal., Nov. 22, 1917.

Whereas: The necessities and stress of this time of war call upon all classes of the nation's producers for most effective and mutual support; and,

Whereas: The classes comprising the rural industries of the state are furnishing to their utmost such support in the production of foodstuffs, hampered by many unavoidable conditions which must be borne, but by others which may be ameliorated by corrective legislation; and,

Whereas: It is apparent to us that the securing of these corrections can be accomplished only by cooperative action of our producers and producers' associations, organized into a separate body for that work alone; it is hereby

Resolved: That this 50th State Fruit Growers' Convention voice its appreciation of the work of this character accomplished during the past year in the protection of rural interests through legislative activity, by the Farmers' Protective League of California, and that this convention hereby pledges moral and material support to further similar activities of that body.

#### "TREE VACCINATION"

The writer recalls that a third of a century ago when engaged in spraying recently planted citrus trees in eastern Los Angeles County, for black scale, an exceptionally prepossessing young man presented a "new" discovery practically amounting to vaccinating the tree to kill all insects and cure the tree of any disease. The treatment consisted in boring a hole to the heart of the tree and filling with a certain black colored powder which would be sold for the nominal sum of, as we remember it, about ten cents per tree. We did not bite, but some of the neighbors did, and they or some other neighbors have been biting on that same thing since. A few years ago an instructor connected with Stanford University took up the matter of plugging the tree with cyanide of potassium. For a time it was thought that certain advantages were to be had from the use of this deadly poison. This was touched upon at some length in the columns of the Cultivator, as have been all of these efforts to control insects by "poisoning the sap." As one subscriber of the Cultivator pungently remarked at that time: "It might be sure death to lice on a fellow's head if he should take a big enough dose of poison, but for myself I don't care to be the subject for the first 'inoculation'" and now comes the department of agriculture

with a warning against tree vaccination which it describes as worthless for scale insects. It announces that makers of a certain scale treatment have been fined \$100 in the federal court. These people furnished their treatment in capsules "containing potassium cyanide and other substances." This treatment originated in Pennsylvania, and we have not heard of any effort to distribute it in California.

#### LOS ANGELES FARM BUREAU

Los Angeles County farmers, or producers whether they are farmers, orchardists, horticulturists, or agriculturists, if members of the farm bureau, are asked to meet at Blanchard Hall, 233 South Broadway, Los Angeles at 10 a. m. Tuesday, December 11. This for the purpose of forming a county farm bureau. Dr. H. J. Webber of the University Citrus Experi-

ment Station at Riverside and the temporary organization committee elected some weeks ago have been holding meetings in all sections of the county. Hundreds have signed the membership list and paid their dollar dues, and these, together with those who will become members before the meeting of the 11th, will gather and elect permanent officers. The officers of the temporary organization are: President, Senator Cogswell; first vice-president, Volney Craig; second vice-president, C. A. Griffith; secretary, W. S. Rosencranz; treasurer, Ralph McNees.

It requires 1600 members to secure the government appropriation to pay the salary of a farm adviser for Los Angeles County which is one of the largest counties in the United States as to the number of farmers. It is also the greatest county in the United

States in the production of crops. Lancaster County, Pennsylvania formerly held this honor, but since the last census, Los Angeles County is in the lead. The need for still greater production is realized at this time, and the farm bureau and the county farm agent are recognized as necessities to that end. In addition to the agent or adviser, five assistants will be appointed. Dr. Webber of the university has done some magnificent work in this county.

Cantaloupe producers of Imperial Valley are perfecting an organization which will handle most of the next season's output, it is hoped with greater satisfaction of producers.

It is not the mistakes we make that retard us, but our inability or unwillingness to learn the lessons that these mistakes teach us.

## A Real Landscape Service For Garden Lovers

Ornamental trees properly placed will improve the value of your property, and make it easier to sell it. Many people who have places to improve are often at a loss as to the best plan to follow in laying out their grounds, and also in the selection of their trees, plants, shrubs, vines and roses.

# Mr. Brown proved that blasting pays

This shows part of the 18-year-old orchard of George W. Brown of Mount Cory. Trees in row at left were planted in ordinary dug holes; those at right were planted in blasted beds.

The trees in blasted beds now average 25 feet high with trunk girths of 42 inches. Those not in blasted soil average 18 feet high with trunk girths of 27 inches.

Plant your fruit trees in beds blasted with

## GIANT FARM POWDERS

STUMPING — AGRICULTURAL

and you will find, as Experiment Stations have found, that "trees planted in blasted holes develop deeper and stronger root systems than trees planted in spade-dug holes," and will bear earlier and yield larger crops.

The two Giant Farm Powders are made especially to suit western farm and orchard conditions. They pulverize the soil instead of packing it. Ask your dealer for either of them—Giant Stumping or Eureka Stumping Powder—and for other Giant blasting supplies. Be sure to get the genuine, bearing the Giant brand. If your dealer has only ordinary dynamites, we will see that you are supplied with the real Giant Powders.

# Farm for Profit

## and Help U. S. Win the War

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

## MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent, produce to the limit. Fertilize your land—the increase in yield and price of crops will more than pay all the fertilizer expense—it will enable you to farm with profit. Don't spend your time working worn out land. Make it pay—Fertilize with Hauser's Organic Fertilizer.

# The December Vegetable Garden in Northern California

Written for California Cultivator By A. R. Gould

PERATIONS in the garden generally are somewhat curtailed this month owing to weather conditions. However, there are times when we can get out and make war on the weeds and make a slight provision by sowing a few items for the coming season. When possible have a general clean-up and destroy any fungous disease which may be lurking in the garden. A few hours on a wet day may be profitably spent cleaning tools and making a survey of the seed catalog, etc. Garden stakes should be tied up in bundles and put away neatly for the coming year. It will also be a good idea to look over the root-crops which were stored away in heaps between dry soil or sand, and if any are showing signs of the least symptom of decay then remove these promptly or they will cause trouble. The rainfall throughout November was rather small hence we were able to continue operations for getting our plots into shape for next year's crops.

### Seed Cleaning

Those subjects such as beans, peas, etc., which we were able to save seed from will provide us with work for a rainy day. The seeds should be carefully cleaned and kept true to name ready for next season's sowing. If the beans need a little more drying they can be laid out on flat wooden trays, and if they are slightly mixed one can generally tell them by the color. The finest fruit of tomatoes and peppers should be selected and the seeds extracted and dried and put away for sowing in the spring. The seeds of the finest squash, vegetable marrow and pumpkin should also be saved.

### Digging, Plowing, etc.

Whenever possible all spare plots should be thoroughly plowed or spaded to a good depth and limed or manured to put the ground into shape for the coming spring. Where the plots are not required for use for a few months it is a good plan to leave soil rough and bumpy, exposed to the beneficial influence of rain, air and frost.

By so doing it will be sweetened and many insect pests will be destroyed. Adobe soil which is plowed should be left up rough, and the rain will break and soften the large lumps. It will be easier to disk or harrow afterwards.

### Broad Beans

We advised sowing the Windsor variety of these last month, but if for any reason you were unable to sow them you should lose no time in sowing now, and those that have them through the ground should draw the soil up towards the rows. They are subject to attacks of the black fly or aphids later on in the season and careful watch must be kept. A good spraying with black leaf 40 solution will control them.

### Peas

Make successional sowings of Little Marvel, Alaska and American Wonder. Hoe or cultivate frequently between the lines of those that are already through the ground. Dust occasionally with soot as a fertilizer and fork or rake in to the surface.

### Onions

Lack of rain has no doubt held up the sowing of this valuable crop, but we hope to be favored with suitable conditions this month to make our sowings of the varieties as mentioned in our notes last month. Onion sets or miniature onion bulbs may be planted in rows 18 inches apart and two to three inches between sets.

### Strawberries

Plants of these may still be put out and during the rains the plants will become well established. See last month's notes for best varieties to grow.

### Horseradish

The root of this plant is used as a condiment. A few roots planted in deeply trenched soil, 18 inches deep, will rapidly increase. The soil should be liberally manured. The best sticks or roots will be secured from those grown quickly, and should be long and straight.

# The December Ornamental Garden in Northern California

Written for California Cultivator By A. R. Gould

LACK of rain prevented us carrying out our planting program on a large scale last month, and we await the first real opportunity. However, we were able to continue the good work of cleaning up the flower beds and borders, cutting back the perennials and removing the annuals which have done good service. If you still have neglected to clean up in this way get to work at once to clear away these withered stems and burn them, but put the remaining ashes back again into the soil; they contain lots of potash. Do not fail to first collect seed from your favorite flowers, and there should be lots of it from the dahlias, petunias, zinnias, marigolds, French and African, gaillardias, coreopsis, salvia, sunflowers and ageratum. This can be cleaned and put in packets or cardboard boxes ready for next season's sowing.

Leaves should be swept together and put into a heap to rot and will

provide excellent leaf soil for digging in the garden. They are more than valuable.

### Taking Slips or Cuttings

This is generally known as propagating, and many of our readers are anxious to increase their stock of geraniums, carnations, etc. If you can fix up a frame or large box and fill it with sandy soil and insert your cuttings in this, covering them with glass, laths or muslin during severe weather, you may be fortunate enough to root a considerable number. You must be careful not to over water them, just keep them moderately moist, and on damp dull days withhold water. You may be troubled with a few damping off which is due to damp conditions and a fungous disease known to science as Pythium de baryanum. This attacks the cutting at the stem just above the ground. As soon as it is observed remove all infected cuttings and be careful with the watering.

### Covering for Frost Protection

### Dipping Wheat

Dipped my wheat in a 40 per cent solution of formaldehyde, dried and sowed in dust about two weeks before rain. Got only half stand. Tried also by neighbor with worse results. What was wrong?—Subscriber, Terra Bella.

Plainly too strong a dip was used. Use 16 ounces of 40 per cent formaldehyde in 40 gallons of water. See article "Produce More" on Page 402 of the Cultivator of October 20, this year.

### Cabbage Lice or Aphis

What may I use for the lice affecting my cabbage?—Subscriber, Anaheim.

The simplest remedy is tobacco spray which may be made from stems from cigar factories, but far more simple and not much more expensive in first cost is the black leaf 40 or some nicotine carrying spray. Full directions on container.

### Prunings Added to Soil

What value if any will grapevine prunings add to the soil in a lemon grove?—Subscriber, Etiwanda.

They will be beneficial but it will take such a long time for ripened wood to decay and be added to the soil that it is possibly a question as to the profitableness of it. It however secures disposal of the prunings.

### Making the Will

We recently gave a bit of homely advice as to the manner of one's writing his own will. A subscriber calls our attention to the saying "He who is his own lawyer has a fool for a client," and we are willing to admit this is often the case. A thoroughly good attorney may save much litigation and loss. However, the attorney is not always available nor even infallible. If we could put our attorneys, as the Chinese do their doctors, on the basis of payment as long as the patient is well and no payment during sickness, it might prove satisfactory as to attorneys. However, the disposal of one's property as he may wish it done is an important matter. There has been one case in California in which a will written on the side of a soap box, duly dated and signed, was probated and property distributed according to the wish expressed. If the courts are able to discover the true intent of a will, it is the principal factor, also it should be written entirely in the hand of the testator.

### Lime on Alfalfa

Will you please tell me how much lime alfalfa, or any land for that matter, needs for a first liming? Is there a special kind of lime or is it merely ordinary lime air-slacked? Is gypsum better than ordinary lime? Would nitrate be better for alfalfa land that has a poor stand?—Subscriber, Dos Palos.

The amount of lime to apply depends entirely upon the condition of the soil. If sour and fine grained soil is to be dealt with a ton to the acre may be applied, from that down to 500 pounds may be effective. Be sure the lime has been thoroughly air-slacked. Where one can secure the finely ground lime rock which has not been burned it proves excellent and there is no danger whatever from burning or

injuring the soil. Gypsum does not take the place of lime in "sweetening" soils. If soil is deficient in humus nitrate would be beneficial.

### BEET SUGAR PRODUCTION

Continued from Page 571

ducing counties, presented the matter to the grand jury. The grand jury succeeded in gathering a fund of information as to the cost of production and the present labor situation. As to the cost of producing sugar from the beets no very definite information was secured. It was asserted, however, by many of the producers that where the grower received in some cases \$7.00 per ton for his beets, on which he performed months of labor and ran chances of losses from weather or other conditions, the factory received, as net profit on each ton of beets, three times that amount.

The growers assert that they will not take these chances, even in answer to the call of their country, when the factories stand in the position they do of demanding such enormous profits. Some who have grown beets for years assert they will not grow them the coming year even should the factories pay nine or ten dollars per ton. One grower testified before the grand jury:

"The acreage of planted and growing sugar beets in the state of California at the present time is approximately 200,000 acres. The acreage in Southern California and within the district represented by the association will equal approximately 100,000 acres, although the owners and growers of a portion of that acreage are not members of the association. One-fourth of the acreage in Southern California can not, and in past years has not been planted to any other successful and profitable crop. And to make it profitable in the future for growing sugar beets it is necessary that a fair return to the farmer upon the raw beet crop be obtained. The sugar beet can be profitably planted if the grower is given a higher price. And that will mean perhaps approximately 50,000 additional acres can and will be planted and developed that are not now cultivated."

The Associated Beet Growers have been factors in the investigation. They are now working through the grand jury of Orange County, the largest sugar producing section of the state.

As to the profits claimed for the sugar factories we quote from a telegram sent by District Attorney Woolwine to the president:

"Sugar beet situation in Southern California extremely serious. Farmers refuse to plant beets under terms offered by refineries. Sugar production in this district threatened. Refineries firm in refusal to pay more. No relief in sight. Investigation by grand jury of Los Angeles County, under state anti-trust laws, discloses by great volume of evidence beyond doubt that price to beet growers for beets as fixed in printed contracts of refineries not sufficient generally to pay cost of growing beets. The price for sugar approved by the government guarantees excessive and unreasonable profits to the refineries. On this account farmers refuse to plant vast acreage. Under less favorable conditions when sugar sold at lower prices, one refinery, representing investment of \$1,250,000, made net profit last year

## Get the most out of your Cover Crops Plant Now!

Right now is the time to plant your cover crops in your orchards, your groves or vineyards. Get them at once so as to benefit by the winter rains. We recommend Bitter Clover, Vetch, Burr Clover.

The heavier your cover crop, the more nitrogen you will put into your soil—the more you will increase its fertility—the larger will be the yield from your trees and vines.

Cover Crops conserve moisture. Plant yours now and be prepared against a dry winter.

Our long experience has taught us what cover crops will succeed best in your locality. Just tell us on a postal what kind of trees or vines you have. We'll give our recommendations and quote prices gladly.

Our 1918 Garden Guide is ready. It tells all about Morse Seeds for your fields and garden. To your wife it has a special message about flowers. Write for your copy today—it's free.

Nearly eight per cent of the eggs marketed in the United States are lost through spoilage or breakage. Much of this loss could be prevented through community egg circles.

between \$900,000 and \$1,000,000. Other refinery, representing investment of \$500,000, made net profit last year of about \$900,000. Experts assert profit will be proportionately greater to refineries coming season under present prices, although production seriously curtailed by refusal of farmers to plant. Combination of refineries to control price of beets possibly unjust to farmers. No remedy except by action of federal government. Situation critical as beets must be planted at early day. Grand jury testimony fully sustains foregoing. Am willing to produce transcript of grand jury testimony and appear personally in Washington before proper authorities. Respectfully suggest matter be acted upon immediately to remedy grave situation."

Mr. Woolwine's telegram which went forward Friday resulted in a call from Hoover to come to Washington. Mr. Hoover wired:

"Your wire of the 30th received. suggest you come to Washington, together with Andrew Cook, F. D. Plann, Frank Merkle, E. Thomas, I. Law and V. E. Wire. Also that you invite two representatives of beet sugar companies who are familiar with other side of question, in order that further discussion of the situation may be had. Be in Washington December 8, when our Mr. Polph will be there."

Before it was possible to obey Mr. Hoover's request to come to Washington the whole fight was transferred to San Francisco before Ralph P. Merritt, representative of the food administration in California.

What the outcome will be even the brewdest are only guessing. That the government can take a hand and assist that the factories be run so as to give justice to the men who are taking the greatest risks, goes without saying. Whether it is wise that should be questioned by many. Some have called attention to the fact that some of the closest advisers of the food administration are men with large interests in the sugar industry. In times such as these it is presumed that such men will subdue their own interests to the general welfare.

District Attorney Woolwine is one of the kind who loves a scrap and he is out for justice for producer and consumer. He issues the following statement:

"It is an error to assume that any conference has been called before Mr. Merritt, and Mr. Hoover has evidently been misinformed. No representative of the Growers' Association, so far as have been able to learn, has had any notice of any conference. Although I was in consultation with Mr. Merritt in San Francisco on November 26 and informed him as to the proceedings before the grand jury here, and told him of the volume of testimony taken before that body, and although he promised to keep me informed as to any action he might take in the sugar beet situation, I myself have received no notice of such meeting, or any intimation that any such conference has been called. I understand that Henry C. Lee, one of the refiners, has gone to San Francisco to confer with Dr. Merritt today.

Asks Full Hearing

"It is plain that this matter cannot be settled by a one-sided hearing, and all in the world that the beet growers desire is a full and complete hearing of this matter, so that the claims that they make can be proven, before the proper authorities. Nothing could be fairer than this, and it seems that ev-

ery effort is being made to circumvent and suppress any such hearing. I do not wish to charge any particular person or interest with conspiring to prevent these matters coming to light, because I do not know where the influence comes from, but one thing is certain, it now appears to be well-nigh impossible to force a simple hearing of the facts.

"The people may rest assured, however, that I shall myself, on behalf of the grand jury of Los Angeles County, and the people at large, do everything in my power to get action in the premises.

"It is, to say the least, disappointing that Mr. Hoover should fix a date for a hearing in Washington and request the district attorney, together with a number of persons named by him in his telegram, to be present in Washington on a certain day, and then, after the parties had made all arrangements to go and bought their railroad tickets, to receive a wire from Mr. Hoover, stating that a conference had been called by Merritt, when, as a matter of fact, no one outside of the refiners ever heard of this conference, and have had no notice thereof. Such conference can have no effectual result, inasmuch as only one side is represented there."

#### DISTILLATE FOR SQUIRRELS

Chas. G. Hawley, Elk Grove, refers to a remedy which has been spoken of in a former Cultivator, but it has proved so effective that we pass on the suggestion as he gives it: "I have fruit and nuts on my ranch and am bothered more or less with the pest and have tried about every thing which the government and state authorities have recommended but have one that is cheaper and better than any I have so far seen advertised and at the same time very simple. It is nothing more than distillate. Take a rag or an old sack cut up in such a way that when rolled up it will go into the hole, soak with distillate, cover hole with loose earth and pack and Mr. Squirrel goes to the hotter land. I do this in all seasons as they are coming in from other ranches for the nuts and fruit. One gallon of distillate is good for at least a dozen holes. I have never had a squirrel come out after the hole was stopped in this way."

In addition we may call attention to the fact that the automobile is a good squirrel remover. Attach to the exhaust a hose which will conduct the fumes from the running engine. Having filled around the hose as it is placed in the squirrel hole surrounded with dirt, then after pulling out the hose, tamp the hole tight shut. However, it should be borne in mind that Kilmol, carbon bisulphide and many other of the gas treatments are sure death to these pests. Rather better results may be had after the rains fill the ground so that the gas is held in the holes longer.

## The Waterloo Boy One-Man Tractor

A FINISHED AND STANDARDIZED MACHINE OF PROVEN EFFICIENCY

DO YOUR BUYING NOW

Demand Exceeds Supply. By Placing Orders Early a Sure Delivery May be Had

Read what John E. Cox, of Calipatria, says:

"I own and operate three of your Waterloo Boy tractors, that I have had in service since the early part of this year.

These tractors are practically working every day, doing heavy work, each of them with a load equal to a liberal ten-horse pull, and they are giving me splendid satisfaction. Each tractor practically earns me \$150.00 per week of its operation, and my upkeep costs for repairs, during all of the time I have been using them, has not averaged \$25.00 per machine.

My son, John E. Jr., operated one of these tractors during vacation, and, although he is only ten years of age, did as good work with it, as any of my men.

I operate several tractors of different makes, but, I get more service with less cost, from the Waterloo Boy tractors, than from any of the rest."

## New KEROSENE Light Beats Electric or Gasoline

10 Days FREE—Send No Money

We don't ask you to pay us a cent until you have used this wonderful modern white light in your own home ten days, then you may return it at our expense if not perfectly satisfied. We want to prove to you that it makes an ordinary oil lamp look like a candle; beats electric, gasoline or acetylene. Passed by Insurance Underwriters. Children handle easily. Tests by U. S. Government and 25 leading Universities show that the new ALADDIN

BURNS 50 HOURS ON ONE GALLON

common kerosene (coal oil), no odor, smoke or noise, simple, clean, won't explode. Over three million people already enjoying this powerful, white, steady light, nearest to sunlight. Won Gold Medal at Panama Exposition. Greatest invention of the age. Guaranteed. To that person who has a special introductory offer to make, under which one

Aladdin in every way (details of offer given in our circular). We want one user in each locality to whom we can refer customers. To that person we

Yours FREE Offer and learn how to get one free, all charges prepaid. Write quick for our 10-Day Free Trial Offer and learn how to get one free, all charges prepaid. MANTLE LAMP COMPANY, 101 Aladdin Bldg., PORTLAND, ORE.

Largest Kerosene (Coal Oil) Mantle Lamp House in the World

Men With Rigs or Autos Make \$100 to \$300 Per Month

Our trial delivery plan makes it easy. No previous experience necessary. Practically every farm home and small town home will buy after trying. One farmer who had never sold anything in his life before writes: "I sold 61 the first seven days." Christensen, Wis., says: "Have never seen an article that sells so easily." Norring, Ia., says: "2% of homes visited bought." Phillips, O., says: "Every customer becomes a friend and booster." Kemmerling, Minn., says: "No flowery talk necessary. Sells itself." Thousands who are coming money endorse the ALADDIN just as strongly. NO MONEY REQUIRED. We furnish stock to get started. Sample sent prepaid for 10 days' free trial and given absolutely without cost when you become a distributor. Ask for our distributor's plan. State occupation, age, whether you have rig or auto; whether you can work spare time or steady; when can start; townships most convenient for you to work in.

## Caring for the Inner Tube

One of the foremost automobile tire dealers in the United States is authority for the statement that more than half of the inner tubes returned for adjustment are nothing more or less than victims of abuse, and are not defective, as claimed by the purchasers, says Albert Marple, writing in the current issue of American Motorist. This is rather a sweeping statement, and, if true, it appears as though the tire user in general might, with profit to himself and the tire companies, be enlightened as to the proper care of the automobile inner tube.

Says Mr. Marple:

"There are a number of things which absolutely must be done if the tube is to give its best service. In the first place, it must be realized that the tube is made of rubber, and that rubber has a number of natural enemies. Among these are sunlight, oil, grease, acid, water and the very atmosphere itself. One of the worst of these is sunlight, which has an effect of drying up the rubber, whereupon it becomes brittle and loses its elasticity, when it is known as 'macaroni' (brittle) rubber.

"If the tube is permitted to come in contact with grease or with rags covered or saturated with grease or oil, the rubber in the places touched will quickly deteriorate unless the tube is soon cleaned.

"The method of carrying the spare tube is also important. It should never be carried loose in the tool box, for if carried this way it cannot help becoming injured. If folded and carried unprotected there is danger of the tube becoming chafed at the points where the folds occur, then, when these chafed places are put under pressure, there is great danger of their proving unable to stand the strain.

"Never should the tube be carried anywhere near the battery box of the car, as the acid of the battery means certain death to the tube, and no one can say just when the battery is going to spring a leak and splash over everything in sight.

"Placing undersized tubes in oversized casings is another common fault of car owners. This practice will ruin a tube within a short time."

## Transportation Problems

Cars are short. Transportation problems will increase during the next few months. Every shipper and every receiver should use every effort to aid at this time. The state council of defense recommends that:

Receivers of freight should purchase in the nearest market and be prepared to quickly store the full contents of every carload they receive.

Receivers and shippers should bunch their orders so as to make full carload lots.

Cars should be unloaded with the utmost promptness. Shippers may help by adopting these methods: Load all heavy commodities up to ten per cent in excess of the marked carrying capacity on each car. Load light

weight or bulky freight to the full cubical capacity of each car. Always have shipment ready for immediate loading upon receipt of cars. Arrange freight in car so as to permit quick unloading at destination. Use drays or motor trucks instead of "trap car service" and avoid use of freight cars for moving food from one point to another within the same city. Furnish billing agent full instructions, permitting weigh bill being made up before loading is completed and time loading to suit schedule of departing trains. Consign shipment to final destination wherever possible and discourage shipments that require changing destination in transit. Do not bill shipment by circuitous route in order to avoid the effect of embargoes.

## Valuable Bulletins

The United States department of agriculture is mailing a series of bulletins of particular interest to the Pacific Coast. We believe these are mailed free by addressing the Division of Publicity, Washington, D. C.

Farmers Bulletin No. 843 touches upon pecan insects and their control. It is written by John B. Gill.

Farmers Bulletin No. 864 contains practical information for beginners in irrigation by Samuel Fortier, chief of irrigation investigations. This bulletin is filled with illustrations of irrigation appliances and methods of work.

Farmers Bulletin No. 866 deals with irrigation in the semiarid West by P. E. Fuller, irrigation engineer.

Farmers Bulletin No. 869, "The Musk Rat as a Fur Bearer," by David E. Lantz.

Farmers Bulletin No. 882, "Irrigation of Orchards," touches upon the selection of lands for orchards, clearing and grading, locating rows, methods of irrigation of orchards, and under this division are many types of flumes, ditches and pipe conductors, basins in orchard irrigation, losses of water, removal of waste and discussion of many other irrigation problems.

Besides the above bulletins, Circular 83, Office of the Secretary, Department of Agriculture, deals with swine judging and gives suggestions to pig club members.

## Importance of Oiling

More damage can be done to a machine in half an hour through lack of oil or grease on some bearings than by a whole season's exposure to the weather, the specialists declare. For this sort of neglect there can be no excuse. Operating a machine without lubrication, especially when the bearings are slightly rusty, will quickly result in the wearing away of the metal, often to a considerable depth, in a very few minutes. Expensive breakages, as well as serious delays, also may be caused by operating ma-

chines on which nuts have worked loose or have come off entirely, allowing bolts to loosen or drop out.

All practicable steps should be taken to preserve machinery now on hand. Needless exposure to the weather should be avoided, and in cases where it is not practicable to house machinery when idle, all bearings should receive a thorough application of heavy oil or grease to keep out moisture and prevent rust. It is believed that on many farms machinery could be more adequately shelter-

ed in the buildings available by exercising care in placing them so as to economize space.

## WILL THE TRACTOR MAKE EACH FARM FEED FOUR FAMILIES?

A century ago nine-tenths of the people were engaged in the occupation of farming. In those days only a small surplus, over the needs of one family was produced on each farm. In fact, crude farming methods made it impossible to produce much more.

But today with fully two-thirds of the population engaged in other pursuits, each farm must produce enough to support three families in America, and war conditions now make it necessary to export great volumes of food stuffs, so that in reality each farm must now support four families.

What has been the result? Prices of food stuffs have soared beyond figures ever before known. The demand has been so far beyond the supply that a problem has presented itself to the people of America as serious as it is difficult to solve.

The tractor may not solve the problem but from a quantity production standpoint, economy of labor standpoint and many others, the tractor offers a great help. However, orders must be placed a long distance ahead.

## TRACTOR EFFICIENCY

It is not so very many years ago that a tractor was quite a curiosity. Perhaps there was one in your community. If the wind was just right you could hear it at work a mile away, the gears howling and grinding and the engine coughing in a sort of tubercular desperation. A bevy of amateur mechanics hovered around it, ready at any time to right the last trouble or administer the last rites for tractors died young and hard in those days.

Today there are many tractors in every prosperous community. The exhaust has a business-like hum with a suggestion of steady power. It doesn't take an expert mechanic to keep them in repair. The tractor has "arrived."

The farmer of today is a manufacturer. From his land, with the aid of labor and machinery, he produces foodstuffs. A tractor is a large part of modern farm equipment, and if it isn't efficient, the cost of production is too high and profits diminish accordingly.

## FARM MACHINERY SHOULD BE CONSERVED

Orders for new equipment and repair parts should be placed as soon as possible.

To produce maximum results with a minimum of labor, new and modern machinery in large sizes should be used wherever possible.

Serviceable equipment, not needed, should be sold or made available to others.

Useless machinery should be returned to the channels of trade as junk.

Thorough lubrication and proper care when in use will materially lengthen the period of service of farm equipment.

More care should be given to protecting farm implements from the weather.

## GET A TRACTOR

When our president said, "Upon the farmers of this country, in a large measure, rests the fate of the nation," and said that every means at the command of the farmer should be employed to increase production, it seems as if he said, almost plainer than words, "Get a tractor."

Easy to Pull Around From Job to Job

GAS

WATER COOLING TANK

Hand Truck Outfit

Same Engine Used on Binder

### 4 HP-190 lbs.

The 4 H. P. Cushman Handy Truck is the most useful outfit ever built for farm work. Engine weighs only 190 lbs., and entire outfit only 375 lbs.

Besides doing all farm and household jobs, this 4 H. P. Cushman may be lifted from truck and hung on rear of binder during harvest to save a team. In wet weather it saves the crop.

### Light Weight Cushman Engines

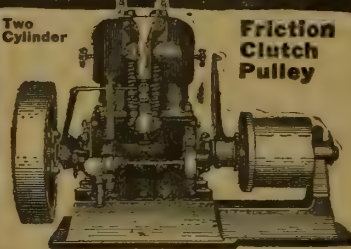

Built for farmers who need an engine to do many jobs in many places instead of one job in one place. Throttle Governed, with Schebler Carburetor. Run very quietly and steadily—not with violent explosions and fast and slow speeds like old-style heavy-weights. Engine Book free.

**CUSHMAN MOTOR WORKS**  
804 N. 21st Street — Lincoln, Nebraska

### 8 HP-320 lbs.

Two Cylinder

Friction Clutch Pulley

### Your own right arm

on the lever of a "K" Stump Puller easily rips out any stump that can be pulled by any horse power machine. Develops a 48 ton pull—all an inch-steel cable will hold.

## K Stump Puller

HAND POWER

Works by leverage—easy as rowing a boat. One man alone can pull from 50 to 100 stumps per day. Works equally well on hillsides or marsh land. Made of Krupp steel—weighs only 171 lbs. Guaranteed against breakage.

Send for special offer and free book on Land Clearing.

National monthly covering all phases of all kinds of Nut Culture, discussed by experts. Official Journal. Highly endorsed. \$1.25 a year; 3 years \$3. Sample copy 10c. 29 State St., Rochester, N. Y.

# My Father's Help To The Farmer!

In a little settlement of pioneers, called Maria Stein, Ohio many years ago, Joseph Oppenheim, my father, was the

teacher. Studious and quiet, he yet had a personality that appealed, for he was helpful to all. Farming then wasn't so profitable as now, and the women and children had to work in the fields.

The Settlers who came to this country generations back were frugal people. They had to be. Yet they were far-sighted, too. They knew that land could be exhausted—they knew it must be fed if it was to continue feeding them. So they wasted little fertilizer. Barnyard manure was their reliance—as it is yet.

Hence it was scattered on the fields with great care. My father made a hand in this labor occasionally. The children from his school bent weary backs over the task. Their drudgery appealed to his heart. He knew what it meant in aching muscles, neglected schooling and dwarfed opportunity. He knew that such machines as were available neither shredded the manure nor spread it fine and wide.

So he set out to build a machine that would do this and save the hard work. It wasn't easy. Money was scarcer than this generation understands. In his little school house he worked out the idea he had—to make a machine that would help keep his boys and girls in school, and ease the labor of their parents.

It's a long story of how the village teacher saved a nickel here and a dime there, worked early mornings and late nights and eventually built a spreader that carried the principles that make the Nisco the leader today.

So much better was it than the old method of wagon tail distribution that the sturdy farmers called it "Oppenheim's New Idea." After a while, when the work had been brought to a practical stage, we called ourselves the New Idea Spreader Company and from this we get "Nisco."

Working out this idea to perfection in the midst of poverty cost great sacrifice and much toil, but ever uppermost in the mind of the inventor was the need of his people. The small shed shown above was built and work started on six machines. They were so practical that he protected the child of his brain by patents, patents that have revolutionized the spreader industry.

How this small plant has grown until ten acres are covered by the present plant, which sold over two million dollars' worth

of spreaders last year, is a story my father could hardly believe if he were alive today to hear it.

But his big heart would swell with pride that he had made so great a contribution to American agriculture—that his efforts had brought prosperity and ease not only to his little circle of friends, but to many thousands more.

He lived only to see the business begun. At his death it fell to me—a boy of fifteen—to carry out his plans. My mother put every cent of her little insurance into making it go—and the Nisco was so valuable to the farmer that today he recognizes the Nisco Spreader as the greatest aid to permanent fertility of his fields.

Because this business is an inheritance of the brave effort of my father to contribute something worth while, it is equally dear to me. And because of his ideal, this machine never will be less than the best we can build.

Our catalog tells of its superiority better than we can here and our free book "Helping Mother Nature" gives some new and valuable information on the use of manure. Send the coupon for them today and see how Joseph Oppenheim made the most notable contribution of his generation to the American farmer. See the machine at the Nisco dealer's in your vicinity. If you don't know him we'll send you his name.

B. C. OPPENHEIM, Mgr.

## OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

## THIS WEEK'S COVER

The busy scene on the cover this week should be one of thousands in California sugar beet fields at the present moment, but unfortunately it is not as common as it should be and not as common as it has been in past years, owing to the present agitation as to cost of production. In any case the tractor is being brought into action to aid in as cheap cultivation as possible.

This particular tractor is made by the J. I. Case Mfg. Co.

## PUT OUT THE FIRE

Stop the fires and win the war. It is reported that from May 1 to October 16 enough food has gone up in smoke within the limits of the United States to feed 136 American soldiers one day for each minute of that time, or, expressing it in dollars, \$12,274,050 worth. This is the known and recorded loss. It is thought that all losses would easily double this figure. The monthly cost of small fires started in grain elevators, grain fields, feed and hay warehouses, food warehouses, packing plants, etc., are for May, \$1,899,800; June, \$2,213,750; July, \$1,505,350; August, \$2,071,150; September, \$1,104,000; 16 days of October, over \$3,480,000.

## THE SUGAR BEET SITUATION

Sugar beet people are discussing the possibilities of producing beets at prices which sugar manufacturers are willing to pay. They have done their best in the matter of economizing in implements and tools, but owing to the labor shortage and consequent indifferent crop, and further to the fact that the manufacturer has often refused to take their beets when they were at their best, they are dis-

couraged. They are willing to make greater investment in tractors and labor saving implements, but wish returns to justify this added risk. These should be given them.

One change which should be made, if the beet producer is to get just returns, is the testing of the sugar content of the beets by a chemist selected by neither factory nor producer but by the state university or some other disinterested party. It is freely charged by the beet producers that grave errors have been made in sugar tests. If this charge is unfounded it will certainly be to the interests of the manufacturers that they may prove their tests correct by one other than their own chemist.

The present agitation will certainly

versity. He has given us the information which appeared in the first article of that issue.

Black mold of onions is a serious pest and one of the newer in the United States, and so far as we know this is the first occurrence of it discovered west of the Rockies. We hope the information given by Mr. Van Pelt in the article will aid us in controlling it in this state.

Bring your troubles to the Cultivator.

## QUALITY

In making his report before the California State Association of Nurserymen Chairman Frank T. Swett of the committee on viticulture referred to the conditions which at one time

## POINTS FROM THE PRESIDENT'S MESSAGE

An immediate declaration of war against Austria-Hungary.

That America wants a peace based on "generosity and justice" that that no other kind can be entertained or accepted.

That Germany must first be shown the "utter futility of its claim to power or leadership of the modern world."

That "our present and immediate task is to win the war."

That "nothing be permitted to turn us aside until this object is accomplished."

That we can "regard the war won only when the German people say to us, through their accredited representatives, that they are ready to agree to a settlement based on justice and the reparation of the wrongs their rulers have done."

"I do not doubt that the American people know what the war is about and what sort of an outcome they will regard as a realization of their purpose in it. As a nation we are united in spirit and intention. I pay little heed to those who tell me otherwise. I hear the voices of dissent—who does not? I hear the criticism and the clamor of the noisy, thoughtless and troublesome. I also see men here and there fling themselves in impotent disloyalty against the calm, indomitable power of the nation.

"I hear men debate peace who understand neither its nature nor the way in which we obtain it, with uplifted eyes and unbroken spirits. But I know that none of these speaks for the nation. They do not touch the heart of anything. They may safely be left to strut their uneasy hour and be forgotten."

result in some good to the producer and we hope in a greater production of sugar in California.

## USE THE STRAW

It is not often now that one sees the burning straw piles of former years. However, we are still careless in saving every one of the straws. At a time of high feed straw is baled and sold in cities as a supplementary feed, but from the farmer's standpoint the cost of baling and transportation should prevent any such use of straw; it is worth more on the farm. With silage or other succulents it may be fed; otherwise it may be used as bedding; but in any case carry it back on the soil. California's semi-arid conditions have caused deficiency of humus in its soils, especially is there deficiency of nitrogenous matter, and we must have more nitrogen to produce greater crops.

Save the straw.

## WATCH FOR THE PESTS

From youth up we have been taught that the work of the little foxes was sometimes more disastrous than that of the older and more experienced. The work of the tiny insects or of the almost invisible fungus may be still more destructive than whole troops of little foxes.

Unfortunately, we are finding new proofs of this nearly every day. In the Cultivator of November 17 we referred to an onion pest, entirely new to California, which had been discovered by one of the Cultivator's subscribers. Mr. Starr was having trouble with his onions. Specimens were submitted to several, and finally to the Cultivator. The Cultivator sent them to Washington, and from one department they were passed to another and finally sent to a specialist connected with the Ohio state uni-

went from California to the Eastern consumer and to its quality today under standardization, and said that if the present rate of improvement was continued it would be but a short time until Cal-i-for-nia would spell quality.

California has long been granted first place in fruit production. This position will be still more advanced, we believe, under the operation of the present act, and the best feature connected with it is that the producers are entering heartily into the spirit of its enforcement.

## COOLIE LABOR

California has surprised herself and the remainder of the United States by the unanimous adoption of the labor resolution in the recent state fruit growers and farmers' convention at Sacramento.

The needs of the farmers of this state are greater than it is possible to make Eastern congressmen realize, and without that realization it will be hard to convince congress of the necessity of going against the wishes of the labor unions and giving to California producers the help they demand.

Here is the gist of the resolution:

"The farmers of California desire to do their full patriotic duty to their country and its Allies, and,

"Whereas: They ask that they have access to the dependable man power to use in that food production which is the chief element in the prosecution of the war to success, therefore,

"Resolved: That we ask our government, as a war measure, to permit the introduction of sufficient Chinese or other farm labor to so increase our food production as to assist the United States in discharging its obligation to feed our Allies and their armies, and prevent them from being starved into surrender. . . .

"The convention instructs the appointment of its chairman, the state commissioner of horticulture, of a committee of nine to represent this State Fruit Growers' Convention, and instructs the committee to use its best endeavors to bring about a material alleviation of the present shortage of labor, and that the committee be further instructed to take up the subject matter of the above with the proper government authorities."

## This Week's War News

Villa's last uprising in Mexico has been practically subdued.

The last colony of Germany has been taken from her in German East Africa. This colony has an area of 380,000 square miles.

The drive has begun for \$2,000,000,000 to be raised by thrift stamps and war savings certificates. The sale of these began on Monday morning, December 3.

A scientifically made bomb delivered to the police commission of Milwaukee, after having been left in a church, exploded while being examined and killed ten men.

The kings of Norway, Sweden and Denmark have been holding conference in Christiania. No announcement is made as to the cause of the conference or the result.

The president has appealed to labor unions to leave settlement of labor disputes until after the war. The only union to be recognized at the present time is E. Pluribus.

The Hauser meat packing establishment in Los Angeles was set on fire, but fortunately saved. That packing plant has contracts with the government for thousands of tons of meat.

General Greene, commandant of the cantonment at Camp Lewis, has issued orders that no soldier on leave of absence shall visit the city of Seattle, this because of vice conditions there.

In the Holy Land the English are within three miles of Jerusalem. The Turks have thrown reinforcements into the field and it is presumed there will be some hard fighting before Jerusalem falls.

No new reports as to submarine warfare, but the losses are continually growing lighter. The submarine is still a factor in the war, but experts declare from now on it will be easily reckoned with.

The Bolsheviks are still in control of the Russian situation, but the impression prevails that loyal troops are exerting a strong influence in all sections save Petrograd. The German propaganda is being extended by every means within their command.

On the Italian line the Germans have announced that owing to weather conditions the fighting there has been materially slackened. The Italians are holding firmly and are even in better position than a week ago. So far as known British and French soldiers are still aiding the Italians.

The Germans on the west front have instituted a terrific counter drive on General Byng's men; also on the French at the Verdun front. The Germans discarded all strategy and returned to the old method of driving in solid formation. The slaughter by the British tanks and machine guns has been fearful. The British line has been maintained almost entire. No report is yet made as to British losses, but it is feared they are great.

## CULTIVATOR CHISEL POINTS

Commenting on the high resolve pictured in the faces of our American soldiers, a London writer says: "This is no longer a war; it has become a crusade." When we went into the war we said it was to "make the world safe for democracy." Our vision has broadened since then; we see the task before us as a much greater and more vital thing; it is to make the world safe for humanity.

Sing a song of Hoover, who never seems to tire,  
 Ninety-nine—and then some—Irons in the fire,  
 Jumping forty ways at once, eyes on every one,  
 Pops 'em out and uses 'em the minute they are done.

If sugar beets aren't planted now—  
 As they had ought to be—  
 Whatever are we going to do  
 For sugar in our tea?

If farmers won't plant them just for fun—  
 As they had ought to do—  
 But talk right up to the factory men,  
 I reckon they'll have to come through.

Do your Christmas shopping early; buy thrift stamps.

The brains of big business, the savings of the slender purse, the heart and soul of our manhood and womanhood are fused in one high endeavor which shall make the mighty army of freedom against which no super-savagery can prevail.

Taxes are paid, thank goodness. Next!

# Agricultural News Notes of the Pacific Coast

## Northern California

Gridley's farm bureau center is now fully organized.

The sugar factory at Hamilton is closed for the season.

Amador County is planting large foothill sections to grain.

Vacaville has a new fruit packing house being erected. It will cost about \$200,000.

Yolo County is organizing infantry and artillery for an attack on ground squirrels.

Lodi, San Joaquin County, estimates its returns from grapes this year in excess of \$4,189,000.

Placerville, Eldorado County, has been shipping prunes to San Jose—"Coals to Newcastle."

California Marvel is bringing as much good publicity to the university as did California Favorite last year.

Auburn, Placer County, has been exhibiting some exceptionally fine Tokay, Malaga and Red Emperor grapes.

Colusa County is organizing farm centers. The work is being aided by Farm Adviser Heileman of Glenn County.

Soil specialists of the department of agriculture have been investigating soils of Grass Valley, Nevada County.

Amador County conducted a bean growing contest during the past season and prizes were awarded on December 6.

Placer County orchardists are making double money by planting cover crops, then pasturing the orchards to live stock.

The state's biggest rice harvest has just closed. The output of the Sacramento Valley will aggregate in value nearly \$15,000,000.

Fruit growers in convention at Sacramento appealed for the closing of saloons of California so as to encourage more efficient help on the farms.

Dairymen of Yolo County have taken over the A. W. Morris Pasteurized Milk Company of Woodland, and the output will be handled cooperatively.

The objections of the citrus growers of Butte County to the "color question" promise to be satisfactorily settled by Deputy State Commissioner Weldon.

Water grass, a serious pest of the rice fields, will be reduced so far as possible. The state horticultural commissioner's assistance will be had in the campaign.

Pear growers gathered at the state fruit growers' convention at Sacramento started a movement for the marketing of pears by the growers. This for the 1918 crop.

Fruit growers of Fortuna, Humboldt County, have installed a fruit dryer which is handling many of the surplus apples of that section. The dryer has a capacity of seven tons daily.

Eureka, Humboldt County, reports that two sheep will graze in that county in 1918 where one grazed in 1917. The increase is largely because of dairymen adding a few sheep to their dairies as side lines.

The division of animal husbandry of the university farm school at Davis held a meeting last night at Willows and made an exhibit of hogs which had been used in important hog feeding experiments. Prof. True and other experts were present.

## Central California

Kings County is threshing rice.

San Joaquin County now has two assistant farm advisers.

C. N. Connor has been named as farm adviser for Tulare County.

Tulare County creameries have just paid to dairymen of that county \$248,952.

Farmers of Oakdale contemplate planting an increase of 15,000 acres in grain.

San Benito County live stock men are concerned at the appearance of anthrax.

Fresno County farm bureaus are discussing peach blight, hog cholera, and anthrax.

Forty-two hundred tons of Stanislaus County fruit were canned in one cannery at Modesto.

Santa Clara began the shipment of Christmas boxes of prunes to soldiers in France on November 15.

A creamery at Soledad, Monterey County, was recently fined \$40 for violation of the state dairy law.

The Morgan Hill Farmer's Union has voted to sell its packing house to the Prune and Apricot Grower's Association.

Dairymen of Visalia are asking for bids on their cream. The Producers' Association now has an output of about 3000 pounds daily.

Monterey County producers are canvassing amongst themselves for sufficient names to secure a farm adviser. Centers are being organized.

Farm bureau meetings of San Joaquin County: Lockeford, December 10; Linden, 12; Douglas, 13; Escalon, 17; Ripon, 20; Manteca, 21; Live Oak, 24.

Because of delay in Hetch-Hetchy work San Francisco contemplates taking the work away from the contractors and pushing the work on the great dam more rapidly.

Representatives of the Central California Wool and Sheepgrowers' Association will go to Washington and urge the opening of California national parks to sheep raisers.

Dairymen of Stanislaus County are figuring on present prices of feeds and present prices of butterfat, which, while high, still do not bring as much as the feed if it had been sold off the place.

Merced County farming districts have made heavier deposits in the banks than any preceding year in the history of the county. Heavy shipments from the county at the present moment are of sweet potatoes.

Irrigators of the Oakdale irrigation district are lining all canal banks with concrete. A cement "gun" is used in applying the cement. It is estimated that 20 per cent of the present waste will be saved by this improvement.

Councils of defense for Fresno, Kern, Stanislaus, Tulare, Merced, Madera, and Kings Counties recently met in Fresno and recommended that California and all other states should at once close all saloons. This as an efficiency or war measure.

A meeting of bean growers was held in Stockton. A committee of seven, representing different bean producing sections of the state, was appointed to make recommendations as to steps to take to stabilize the industry and encourage greater production.

## Southern California

Los Angeles has voted "dry."

California never had as large a holdover crop of Valencia oranges as this year.

One car of walnuts recently shipped from Santa Barbara County was valued at \$11,000.

Imperial Valley reports 225,000 pounds less of turkey available this year than last.

The east side of Imperial Valley will ship 140 carloads of sheep during the present season.

Practically all walnuts are shipped and packing houses are rapidly finishing the run on the culls.

An Imperial ostrich grower recommends substitution of roast ostrich for turkey and roast pork.

Fullerton, Orange County, estimates its loss to the walnut chop from the June hot spell at 500 tons.

Banning and Beaumont and other near-by districts of Riverside County are discussing a cooperative cannery.

California raised enough beans during 1917 to supply the needs of the American army for more than a year.

An Orange County lima bean grower harvested 30 sacks to the acre and received a return of about \$135 per acre.

The farm center at Murrietta, Riverside County, is discussing plowing under all straw. The idea is to save humus.

One car of frozen turkeys, totalling about 25,000 pounds, was shipped from Brawley to Los Angeles for the Thanksgiving trade.

Carpinteria, Santa Barbara County, is finishing the shipping of its largest walnut crop. It will bring the growers of that valley \$175,000.

The Placentia orange growers recently met in annual session. The association shipped 900 cars from the orchards of its 200 members.

Some embarrassment exists in the Imperial Valley pig contest because of the classes being so large and the number of available pigs so small.

Lemon shippers have been receiving some exceptionally fine returns for fall shipments. Chula Vista, San Diego County, reports this the best year since 1912.

Dairymen of Orange County are asking incorporated cities to pass ordinances making it a misdemeanor to use milk bottles for canning fruit or any other use than milk delivery.

The citrus experiment station at Riverside netted \$26.40 per acre above costs, for blackeyes and other intercrops grown in citrus orchards. The gross income per acre was \$46.19.

The Coachella Valley, Riverside County, shipped the first car of Southern California navel. The fruit was grown at Mecca on the edge of the Salton Sea and 200 feet below sea level.

An organization of water users of the Imperial Valley was recently perfected at El Centro, the idea of the organization being to give both financial and moral support to the Imperial Valley irrigation district.

Mr. Shamel of the department of agriculture thinks that Southern California has tobacco producing possibilities. The production of Turkish cigarette leaf in Central California has been almost entirely discontinued.

## The Coast and General

The United States produces 16,000,000 bushels of buckwheat.

Wenatchee Valley is shipping apples to Shanghai and Hongkong.

Last year's potato crop was the biggest ever, 440,000,000 bushels.

The production of castor beans is an important industry of the Philippines.

The Rivers and Harbors Congress convened in Washington, December 5-7.

The corn crop of the United States will total 3,191,083,000 bushels, the biggest ever.

Jobbing prices on fancy barreled apples in Chicago are running around \$5.00 to \$6.50.

Washington state irrigationists will meet in national convention at North Yakima, December 10-11.

Bean growers the United States over are asking for fixed prices or for some measure which will stabilize the market.

At a Farmer-Banker Convention at Pullman, Washington, recently, steps were taken by the bankers to give financial aid to pupils taking agricultural courses.

A slight decline has caused long staple cotton growers of the Salt River Valley some loss, though the drop was only a matter of two or three points off from 73½ cents.

Apple growers of the United States are appealed to to contribute 100 carloads of apples for soldiers in the trenches. They will be distributed through Y. M. C. A. bureaus.

Honey producers of Payette Valley, Idaho, have shipped eight cars of extracted honey this season. They received, it was reported, around 14 cents.

Growers of cocoanut in the Philippine Islands assert that unless concerted action is taken against insect pests the entire industry will be destroyed. The bureau of agriculture has made an appropriation of 2500 pesos to inaugurate a campaign.

Attendants at conventions at Washington are sleeping in cots in hotel corridors and private residences. Each of the larger hotels is turning away two to three hundred every day and many are compelled to go to Baltimore for hotel accommodation.

There is contention between the hay growers and the stock men of Idaho as to hay prices. The stock men, especially sheep people, maintain they cannot keep stock and pay today's prices, and the department of agriculture is appealed to settle the question.

The reclamation service reports that on the Salt River project, under the Roosevelt Dam, there are 67,000 acres of alfalfa, 25,000 acres of sorghum grains, 9000 acres of barley, 4000 acres of wheat, 23,000 acres of long staple cotton, over 1000 acres of citrus fruits and 53,000 acres of pasture.

In some Eastern states where good highways prevail highway freight trains, tractors with trailers, are a regular feature. Regular truck express service is also maintained between Akron, Ohio, and Boston, Massachusetts. Regular schedule is maintained for the round trip of 1510 miles, which is made in less than one week. This service was started last April.

## "Splendid Lubricating Qualities"

### PAIGE

McKinney-Cord Motor Co., Phoenix  
"we cannot speak too highly of  
the splendid lubricating quali-  
ties of Zerolene."

### WINTON

The Winton Co., San Francisco  
"We use Zerolene extensively.  
It is giving entire satisfaction."

### CHEVROLET

J. W. Leavitt & Co., Los Angeles  
"Zerolene is our choice for  
Chevrolet cars."

## Production and Marketing of Farm Products

From Address by Stoddard Jess at Dedication of Hilgard Hall

IFE should be measured by  
achievement rather than by  
the passing of time. It is  
what a man does, what he  
accomplishes, that counts,  
and not how long he lives.

True life is service, and service is  
the only thing in life that is self-sat-  
isfying and abides. The satisfaction  
that comes from doing things that  
make for the welfare of others and for  
the betterment of the world brings us  
true happiness. A man who has added  
to the efficiency of mankind by unlock-  
ing the secrets of nature, even in  
small degree, has not lived in vain.  
Civilization itself represents the ac-  
cumulative results of the discoverer  
and the inventor.

It is fitting and proper that we  
should be gathered here today to dedi-  
cate this hall of learning to the great-  
est of all sciences, the science of ag-  
riculture, and in the name of one of  
its noblest and most consecrated  
workers, Professor E. W. Hilgard, a  
man who faithfully did his full share  
in laying the foundation for the intel-  
ligent development of the horticul-  
tural and agricultural resources of our  
great state of California.

The prosperity of the farmer is the  
chief cornerstone in the prosperity of  
the state. All industries in both peace  
and war rest upon it

Our greatest need is higher effi-  
ciency in making and marketing the  
products of the farm. With the great  
acreage of arable lands in California,  
put to its highest use and managed  
with proper efficiency, the state would  
not only produce practically every-  
thing needed for the consumption of  
its people but would receive for its  
surplus returns that would make it  
the most productive state in the Uni-  
on and the most productive section  
in the world. Lack of intelligent and  
properly organized effort is the only  
answer to the query—why California  
imports meat and meat products,  
flour and cereals, sugar and many oth-  
er products—that can be grown as  
well within the state as outside of it.

The success of the farmer requires  
a proper understanding of his mission  
as a farmer. He should know that his  
first duty is to produce everything  
that is needed for the support of his  
family, that he can produce on his  
farm, devoting the part of his land re-  
maining to the production of such  
crops as it may be best adapted to  
raise. The farmer who produces what  
his family consumes buys of himself  
and sells to himself, thus saving two  
profits, which he would otherwise have  
to pay to the middleman. The farmer  
who produces what his family con-  
sumes lives better, because he pro-  
duces many things that he would not  
feel justified in buying.

His success demands that he under-  
stand the desirability of the rotation  
of crops. His success depends in no  
small degree on the care and intelli-  
gence shown in the selection of seed.  
The success of the farmer engaged in  
dairying demands definite knowledge  
as to the butterfat producing quality  
of every cow in his stanchions. The  
success of the farmer engaged in pro-  
ducing pork demands that he under-  
stand the necessity of maturing his  
pigs for market before they are ten  
months old.

Another question of equal import-  
ance to the success of the farmer is

the disposition of his products. With-  
out a stable market, insuring fairly  
remunerative prices, there is no incen-  
tive to produce. California producers  
have probably suffered more from lack  
of satisfactory marketing conditions  
than the producers of any other sec-  
tion of the United States.

The producers of wheat and barley  
in California have never been offered  
a market that would allow them to  
drive up to a warehouse with a cer-  
tainty of receiving to within a certain  
number of cents per cental of the  
day's prices at seaports, as has al-  
ways been the case in all sections  
East of the Rocky Mountains. Thirty  
years ago the marketing of grain and  
hay in California was largely a mat-  
ter of barter between the pro-  
ducer and the man who was willing  
to buy, and it is so today in a large  
degree. The producer had to sell to  
secure funds to pay his current ex-  
penses. As the result of the barter,  
the producer got about 50 cents on  
the dollar of what the purchaser real-  
ized on the product, after it had pass-  
ed out of first hands, and this irre-  
spective of any change in the value  
of the commodity in the markets of  
the world. This condition was un-  
doubtedly due, in a large degree, to  
the fact that California was so far re-  
moved from other markets that it  
gave the middleman the opportunity  
of buying at a price determined by the  
price in the outside market, less the  
cost of transportation, and the oppor-  
tunity of selling at the price in the  
outside market, plus the cost of  
transportation, and the cost of trans-  
portation was very high. The same  
has been true of other crops.

Not only has the cooperative meth-  
od proven a panacea for the problems  
that confronted the growers of citrus  
fruits, but it has proven a decided ben-  
efit to the independent shipper. The  
method has resulted in stabilizing the  
market, so as to allow the independ-  
ent shipper to continue his business  
and make satisfactory returns to the  
grower who markets through him.

The advantages of cooperative mar-  
keting are: broader markets, increas-  
ed consumption, proper distribution,  
standardized quality of product and  
stability in market price. The success  
of our producers in all lines in which  
the principle can be applied may be  
said to be proportionate to their co-  
operation in marketing their products.

While the United States, with its  
large area of fertile lands, has been a  
great exporter of food products, it has  
for years been patent to thinking  
men that the time was not far distant  
when home consumption would equal  
home production, and necessitate  
larger production, through higher ef-  
ficiency, to meet the ever increasing  
need of a greater population. Condi-  
tions in connection with the great  
world war, in which we are engaged,  
have caused us to realize the neces-  
sity of increased production as we  
never have before. We are forced  
to realize that our responsibilities are  
not limited to our own needs. In  
times of peace and through the en-  
couragement of world wide transpor-  
tation facilities, countries become de-  
pendent on other countries for food  
supply, thus establishing responsibil-  
ities that should be recognized and met  
at all times. In this time of war it  
is our responsibility to feed our Allies

and to furnish food to the neutral countries of the world, to keep their people from starvation, when used for their own requirements, at the cost of the strictest economy and even discomfort on the part of our own people. We must encourage production to the utmost, that we may meet the needs of humanity crying for food. Wars may be won by bread supply rather than by bullets. In times of extreme need, man's humanity to man demands that the food of the world should be mobilized and used for the proper protection of all.

While the lack of such intensive cultivation as is common in European countries is undoubtedly due to the fact that with us land has been comparatively cheap, while labor has been dear, it is time for us to make a business of farming, to meet present needs and the increased demands that will surely develop, and no longer sit idly by and watch the farmer operate in the desultory manner in which many of them do, through ignorance of right methods, when advice from a state or county farm agent would make for greater efficiency. In some respects the American farmer is the best farmer in the world today. Through the use of the most improved machinery he probably produces more with the same amount of labor, but as our broad acres become more valuable, made so by an ever increasing consuming population, larger yields of product can only be secured by more intensive cultivation, at the expense of an increased cost of labor.

It is time for us to provide the opportunity for men to secure land to cultivate, and to provide in some way for financing their initial needs, under safe and proper restrictions and supervision. The best interests of California demand an increased number of small farms, small holdings with intensive cultivation, rather than large holdings poorly farmed.

I am glad to say that the bankers of the country are evidencing an ever increasing interest in promoting the welfare of the farmer. It is becoming recognized among bankers that the highest use money can be put to is to finance the needs of the farmer.

It is the responsibility of the state to foster agriculture, to encourage better methods of farming, and to secure higher efficiency in the production of farm products. Under the supervision of the department of agriculture of the state university, county or district agents should be employed and maintained to cover the entire state, whose duty it would be to furnish information, to supervise and cooperate in every way with the farmer, to the end that he may adopt better methods and manage his affairs more intelligently. What has been and is being accomplished by the department of agriculture of our national and state governments, by research into the remotest corners of the globe, to discover new products and new varieties adaptable to successful growth in our own country, is but little understood. What is needed now is to assist the farmer to make proper use of the knowledge so acquired.

The committee on statistics and standards of the chamber of commerce of the United States of America in a special bulletin recently published, says: "It is true that the fundamentals of agriculture, crop rotation, intensive farming, irrigating, dry farming methods, fertilization and the like, are the products of experience, and consequently as old as farming itself. Yet it is equally true that the agricultural colleges of the state universities

have not only sought to teach the often neglected observance of these elementary and necessary practices, but have likewise, by experimentation, laboratory tests, and investigation, brought farming to the high plane of scientific, intelligent pursuit, instead of the rule-of-thumb performance that it was often in the past."

There is no use to which the funds of the state can be put that will prove more profitable, or receive more hearty approval of the taxpayers, than a liberal support of our state university and its agricultural department.

#### SELECTING CORN

Circular 180 of the University of California at Berkeley calls attention to the selecting of seed corn. It is written by Prof. Ernest B. Babcock who calls attention to the increase in the production of corn in this state. In 1915 there were 64,000 acres, and the estimate is made that during 1917 nearly double that acreage was planted.

Many California growers have been using seed imported each year from the Middle West or else have planted

unselected seed from varieties which have become acclimated, such as the King Phillip variety. While the average yield per acre in California compares favorably with the average yield per acre in the corn belt states, it must be remembered that most of our corn is grown on deep soils and under irrigation. With proper seed selection, therefore, the average yield per acre in California should exceed the average yield in humid climates while the uniformity of our products should come to equal that of older corn growing regions.

#### USELESS HOLDING OF LOADED CARS

Shippers who hold loaded cars at yards while deciding on their final destination contribute importantly to the shortage in transportation according to the bureau of markets. Specialists who studied conditions at the Potomac Yards, Virginia, for 30 days last summer, found that 236 cars of perishable commodities were held on the average of 44 hours each by shippers or consignees, before issuing orders to move the cars. No car held for less than 24 hours was counted. A

car of cabbage was held for 78 hours; a car of watermelons, 84 hours; a car of cucumbers, 104 hours; a car of potatoes, 128 hours; and a car of tomatoes, 213 hours.

These facts make clear that shippers through these yards are abusing their diversion privilege and are wasting much car space by not keeping their cars moving. The remedy is to file diversion orders in advance of arrival.

Certain varieties of soil bacteria or micro-organisms, really a low order of unicellular plants, are associated with a number of necessary soil activities which have to do with the development of available plant food and the successful growth of crops. These include nitrogen-storing bacteria which live on the roots of legume plants and the bacteria which cause fermentation and the decay of organic matter and which are related to chemical changes in the soil by which the plant food is gradually made soluble and available to the plant roots.

One benefit of the war is that it has induced consumers to study foods and food values.

## Breed Leaders

Every breed of livestock has its outstanding character the same as the human kind. A great dairy cow has proved her ability to produce anywhere up to 15 tons of milk annually; the trotting horse has secured his record around two minutes; the beefmaker has shown his ability to make the least amount of feed into the greatest amount of food; swine, sheep and others of the livestock family have shown themselves great characters. In addition—and here is where their worth is proven—these animals can transmit their productive power to their offspring.

Beginning with the issue of August 4 the Cultivator gave an account of Pieterje Bloom of the university farm dairy herd. Some things she has done and more that her daughters have done were chronicled. She was a most worthy leader in this series of articles. Others of her kind follow. More of the "handsome is as handsome does" type of animals will be given in the columns of the Cultivator during the next few months.

Written for California Cultivator

### ALTAMA INTEREST 98455

IN THE number of show yard winnings, including many championships and grand championships, in the high average of butterfat production, and in individual excellence, the Jersey herd owned by Guy Miller of Modesto is equalled by few and surpassed by none in California. A very considerable part of the honors won by the Miller Jerseys must be credited to his wonderful herd bull, Altama Interest, whose photograph appears on this page.

Mr. Miller bought him as a seven

list of his daughters together with their individual records which will give the reader a line on this great bull.

Gladys of Venadera made 515 pounds of butter at three years old; Signora of Venadera made 452 pounds butter as two year old; Altama's Goldie made 380 pounds at two years; Euzelia of Venadera, 405 pounds butter at two years; Yvonne of Venadera, 348 pounds butter at two years; Artis of Venadera, 323 pounds as a two year old; Lora of Venadera, Stella of Venadera, and Astrea of Venadera, three other two year old

Altama Interest

months old calf from the Marston Farm, Bay City, Michigan. His dam, Althea Altama, has a Register of Merit record of 637 pounds butter in one year. He is strongly bred along production lines on both sides of his pedigree, and he has been a consistent winner in show competition from junior bull calf to aged bull class. He was grand champion at Sacramento in 1912, 1913, and 1916, and reserve and senior champion at San Francisco world's fair, one of the biggest Jersey shows in coast history.

However, Altama's ability to win blue and purple ribbons represents but a portion of his value to his owner. Unless a sire is able to produce daughters of merit and transmit heavy production down through his get he is not worth much to either his owner or the breed. Altama Interest is just as strong, if not stronger, in his prepotency as in the show ring. We give a

daughters, all made records as large or larger than any of the above, but Mr. Miller did not have the records at hand when the writer interviewed him in San Francisco during the Land Show. Neither did he have a complete record of this bull's get owned by many other breeders. But enough has been written to show what a wonderfully valuable sire he has proven himself to be. Probably if he had been in other and less experienced hands than those of Mr. Miller he would not have done so well; probably he would as he is one in a thousand. The worth of a sire, an outstanding sire like Altama Interest, is difficult to estimate. His blood goes down through succeeding generations and branches out on both sides of the pedigree until the tabulation of some particularly high record offspring is red inked to the limit. Altama is one of the truly great California dairy sires—Jersey or any other breed.

## Western Berkshire Congress

The Western Berkshire Congress which covers the Pacific Coast and mountain states will meet in annual convention at University Farm, Davis, February 21-22. An outline of the program which has been sent us by the secretary, Homer Hewins, Calistoga, follows:

### February 21

10 a. m.—Informal meeting of breeders and examination of the animals consigned to the sale.

1:30 p. m. — Meeting in Assembly Hall. Addresses by Professor True, Prof. J. A. McLean, of the University of British Columbia, the recognized Berkshire authority of Canada, and

others. C. E. Barrows will also tell us how he did it.

7 p. m.—Banquet and election of officers.

### February 22

Sale of bred sows and gilts starts at 10:30 a. m. sharp.

We want each breeder who can, to consign two good bred sows or gilts, or a sow and a gilt to this sale.

First—They must be good. Second—Now is the time to breed them. Sows must be bred not later than December 25, 1917, so they can carry their own guarantee in the sale ring. Experience has shown that sows heavy with pig bring the best price.

Entries must be in the secretary's

hands not later than December 31, 1917. This means name and number of sow; pedigree showing three generations of ancestors; name and number of boar to whom sow is bred and date of breeding. Also, and don't forget this—weight of sow. Have her in good shape. The weights will be published in the catalogue and sows will be weighed at Davis to check up.

#### ERADICATING TUBERCULOSIS

From Address by F. F. Field before Holstein-Friesian Association at Worcester, Massachusetts

**F**IRST is cleanliness. Keep cobwebs swept from your stables and have them properly whitewashed as often as necessary to keep clean. Get all the sunlight into your stables that is possible. Have plenty of fresh air in your barn.

As long as there is plenty of it and it is fresh, that is all that is necessary. Treat the animals as human beings are treated for tuberculosis—give them the "fresh air" treatment.

Treat mangers, stanchions, feeding boxes and floors with disinfectant solution. Stable fittings and floors must be washed and kept clean and well saturated with germ killer as often as necessary to keep them clean, at least once a week. Modern stable fittings are more easily cleansed, but they are not necessary or essential in the work. Wood floors and fittings can be made clean and disinfected. Manure should be promptly removed from stables to eliminate any possible danger from this source.

As soon as the cow drops her calf, the calf should be taken away, never allowing the mother to even smell it, as the calf never should be allowed to have any of its mother's raw milk.

Feed the calf on pasteurized milk heated to 145 degrees and held there 30 minutes from the start. Feed no other. This milk should invariably be fed at blood heat or the same temperature as milk freshly drawn from the cow.

Never allow calves, from the time they are born, to mingle with any reacting animals, or any cattle, old or young, which you have assumed to be reactors. As they get older never allow them to drink water from the same trough or the same bucket that has been used for that purpose by the cattle assumed to be reactors. Water is a carrier of tuberculosis germs.

When they are old enough to turn to pasture, have a double line of fence, ten to 15 feet apart, between your reacting animals or the assumed to be tubercular ones, so that your reacting animals and your clean ones cannot get their noses together or in any way come in contact with each other.

Application of the tuberculin test at this period (say as yearlings) will determine the progress made in "cleaning up." Employ only a veterinarian of known integrity and skill; such a man will use only a standard preparation of tuberculin. The services of such a man cost no more than those of an ordinary one.

It is well to have your breeding cows tested at least once, by a competent veterinarian, with the tuberculin test; if reactions result, it does not follow that all reactors will by any means be "spreaders." Under this method unless a reactor proves to be a "spreader," she is not a source of danger, although she may at any time become so. If a "spreader" has been found, she should be removed from the herd. If not valuable, destroy her.

Now by carrying out this method, in a few years you will come to rea-

lize that you have turned what looked like a serious loss into a profit. In other words you have grown up a new, healthy herd, while at the same time you have preserved your tubercular breeding herd without any material loss, which herd can be maintained until age and condition indicate the time for their disposal.

Calves' navels should be kept disinfected until they are practically dried up. Calves' feeding pails and buckets should be kept clean and scalded. Have plenty of sunlight and fresh air where the calves are kept. Calves' bedding should be dried and not left wet for the calves to lie down in. In other words, treat them humanely, as you would your own babies.

"It's a common sense method—keep everlastingly at it."

#### NO STOCK ON HIGHWAYS

The last session of the California legislature passed a law which makes it a misdemeanor to use the public highway for a cattle range or for tethering cattle. The law provides that: No person owning, or controlling, the possession of any horse, cow, mule, ass, sheep, goat, hog or other live stock, shall voluntarily or negligently permit such animal to stray upon or remain unaccompanied upon the public highway, or shall permit the tether or any portion thereof to which such animal may be attached to lie across or upon any highway, and no person shall feed, pasture or camp any such livestock upon any highway between the hours of sunset and sunrise. The penalty for violating this may be \$500 fine and imprisonment for three months.

#### RED STAR

The soldiers' war wants are cared for by a number of agencies, chiefly the Red Cross; the animals, too, have a helping organization working along Red Cross lines, but known as the Red Star. The mission of the two is much the same; one benefits humans, the other benefits animals. What the Red Cross does for the soldier, the Red Star does for the war horse.

The Red Star movement came into existence at an international convention in Geneva in 1914, its objects being to bring about international cooperation in behalf of sick or wounded war animals and to secure the neutralization of those engaged in such work by international agreement.

#### Book Review MILK HYGIENE

"Principles and Practice of Milk Hygiene" by Louis A. Klein, V. M. D., Professor of Pharmacology and Veterinary Hygiene, University of Pennsylvania. Published by J. B. Lippincott Company of Philadelphia.

In this book an effort has been made to present systematically, in concise form, the facts and principles which are of importance in the practice of milk hygiene and to describe how they may be applied in the inspection of dairy farms and in the examination of milk. There are 330 pages given up to the nine chapters and appendix. There are several illustrations, both plates and drawings of appliances to aid in better milk production. As noted in its title it touches upon both principles and practice. The chapter headings are Physiology of Milk Secretion, Colostrum, Milk,—this chapter touches upon its chemical properties, constituents, variations, physical properties, color, odor and taste, biological properties, ferments and many other points,—Bacteria in Milk, Milk Defects, Influence of Disease upon Milk, Dairy Farm Inspection, Pasteurization, Methods of Examining Milk, and Appendix. Amongst other features given in the appendix are methods and standards for the production and distribution of certified milk. The book is true to name, in being both scientific and practical.

## Great Little Tractor

### For Orchards and Vineyards

Built by Long-Established Concern

Here is the tractor that the owners of orchards and vineyards have wanted to buy for years. It is built by the Bean Spray Pump Co., makers of the famous Bean Sprayers and Pumps. It does what no other tractor has ever done before. Its patented front-drive offers exclusive features, which sooner or later you will want in a tractor. Don't buy any tractor until you know all about it. Don't find out about this too late.

This means great pulling power with a very light tread. No other can work so well in light soil.

#### Handles Better Than Horses

This Tractor is handled more like horses than any other machine in existence. And it does what horses cannot do. It will pass under tree branches only 4 feet off the ground, plowing close up to the trunks. It works between 7-foot rows in vineyards, and cultivates right up to the vines without breaking off young shoots.

You can turn it all the way around inside a 10-foot circle (5-foot radius); and it pulls with its full power on these turns the same as on straight-aways.

When you hit soft spots or holes you simply "gee" or "haw" the track and pull out, as you would with a team.

#### Great Traction With Light Weight

This is the lowest-priced track-laying tractor manufactured. It weighs but 3100 lbs. and costs less to operate than wheel-type tractors of equal power. Note how the track grips the ground, and compare that contact with the wheel-type's.

## BEAN TrackPULL Tractor

#### Pays for Itself

The Bean TrackPULL Tractor pays for itself in what it saves its owner. It is simple and strong and durable. Every part is over-strength. The motor is an automobile type, so you know how to care for it. The Tractor is rated at 6 h. p. at drawbar, and 10 h. p. at the belt. On account of the patent front drive principle and simple transmission the fuel consumption is far less than other types doing the same amount of work.

#### Get Catalogue Today

Send the coupon for our new catalogue. Send it today, for the price of this Tractor may have to be raised without notice. The necessary cost of materials, due to the war makes a permanent price impossible.

## California Shorthorns at the Pacific International

Written for California Cultivator

THE California Shorthorn breeders who ventured the long expensive trip to the big Portland show this year maintained the state's reputation as a certain winner at every American live stock show where the state has been represented.

T. T. Miller; Pacheco Cattle Company; Roselawn Stock Farm, and the University Farm, shipped one of the finest lots of Shorthorn show cattle north that has ever been sent out of the state. When it is considered that many of the classes had more than 20 different entries and the average number in a class was 12, the honor of winning many of the biggest prizes is no small one. Our correspondent writes that the Portland show this year was wonderful. Over \$5000 was offered for the Shorthorn classes

nia, Brandsbys' Jinny 18th, had won the senior championship and came up against the beautiful roan heifer, Topsy 4th, owned by Day and Rothrock. The judge placed the younger animal first, but a majority of the ringsiders favored the handsome red cow which carries such straight lines, smooth, mellow fleshing qualities, and who has produced a calf without losing any of her bloom or quality.

Frank Brown of Carleton, Oregon, captured grand championship on his great bull, Diamond Perfection, beating A. D. Dunn's junior, Escana Clipper. Mr. Miller's Diamond Choice was a strong competitor in the senior bull championship class and won first in the three year old and over competition.

As usual Pacheco Cattle Company won first in calf herd and get of sire.

Best Steer Ever

This is California Marvel, the steer bred and fitted at the University Farm at Davis, and exhibited at the Pacific International Live Stock Show at Portland, winning there grand championship. The judge said: "This is the best Shorthorn steer ever shown in this country. Prof. True and Alex. McDonald are to be congratulated.

alone, and the other beef breeds almost as much. He says the California exhibit was given much prominence by the display of a giant banner over 100 feet long on which was painted, "California Shorthorns."

Competing with Universities of Oregon, Washington, and several individual breeders the University of California won the grand championship in the fat steer classes, on California Marvel, a Shorthorn calf and a half brother to their grand champion at Chicago last year.

Wm. Hartnett, formerly noted beef cattle judge of the Argentine Republic, tied the ribbons, and his work was excellent. Collectively the California entries won more first premiums than any other state, and the Miller herd of only six head won more firsts than any single exhibitor.

The most tense moment of the judging in the Shorthorn classes was over the grand champion female. Miller's many time champion in Califor-

Old Truedale's get seem to be unbeatable as it has won consistently now for two years. Miller won second place on aged herd, Frank Brown getting first.

As the writer of this article was compelled to make a hurried departure for the International at Chicago the details of the big Portland Show could not be written, but in closing he says, "The Hereford show was high class; sheep and hogs, both in the breeding and fat classes demonstrated the wonderful progress the Northwest has made in the live stock business. Auction sales were held every day of the show and a large number of fine stock sold to men who wished to improve the standard of their herds."

This show is a great educational feature in the Northwest. It has grown from a mere infant in 1910 to the second largest in the country and will continue to grow. The people appreciate the power for good such a show can be and give it their unqualified support.

## Percherons

THE annual meeting of the stockholders of the Percheron Society of America will be held at 8 p. m., Monday, December 3, 1917 at Chicago.

Percheron judging at the International Exposition begins the following morning. There will be an extremely strong show.

Secretary Dinsmore writes: "As producers of Percherons we must never forget that our continued prosperity depends upon a prosperous condition in the trade for grade horses sold for

commercial purposes. The latest available figures for European countries, supplied by Food Commissioner Hoover, show an actual increase in the number of horses in Germany and Great Britain since the war began. France shows a decrease of 914,000 head between 1913 and 1916, and all other European countries having available data show decreases, except Sweden, where there has been a slight increase. Germany's increase is due to horses taken from Belgium, northern France and Russia; Great

BETTER CATTLE

Get full service from your cattle. Lameness, scouring, sore udders and kindred ailments reduce their usefulness and fruitfulness.

513 Hearst Bldg., San Francisco  
Carruthers Farms, Mayfield, Cal.

At the bottom of your letter to advertisers just say "California Cultivator" and prompt reply is assured.

Britain's to horses bought for war purposes. The decrease in France came during the first 11 months of the war—since then there has been a slight gain due to purchased war horses.

The United States had 21,195,000 horses January 1, 1915, and 21,126,000 on January 1, 1917—a very slight decrease, in spite of the fact that we exported 805,422 head during the 28 months ending January 1, 1917. Mules increased from 4,479,000 January, 1915, to 4,639,000 on January 1, 1917, although we exported 267,144 mules in the 28 months ending January 1, 1917. Exports have continued at a heavy rate so far in 1917 and will undoubtedly continue while war lasts.

"The outstanding fact, however, is that prices have not advanced on any but very heavy draft horses. Grain, cattle, hogs and sheep have doubled or trebled in value—horses have not advanced at all, save for the limited class mentioned. Automobiles and

light delivery trucks have displaced nearly all driving and delivery horses. There is no longer a general market for surplus horses under 1200 pounds weight. Those that will not do for military work sell very low, ranging from \$65 to \$115, and are hard to dispose of at that. Horses from 1200 to 1500 pounds are still used to a very limited extent in the cities, and are a popular kind for use on farms. They also have a wide outlet for artillery purposes, but the supply of these especially those under 1400 pounds, is more than equal to the demand.

"The supply of heavy horses is limited. The best informed men estimate that of our 21,000,000 head, less than 1,000,000 are real draft horses, weighing over 1600 pounds; and the demand for these efficient workers is such that they are holding their own in cities and increasing in popularity on farms. There is every reason to believe that the demand for drafters will continue to exceed the supply for at least 20 years yet."

Three World's Records for Butter Production

When Aaggie Acme of Riverside 2nd completed her second yearly test for milk and butter production on November 10 she became the holder of three world's records for butter production, thus adding further renown to the great herd of registered Holsteins owned by A. W. Morris & Sons Corporation of Woodland.

On strictly official test Aaggie Acme of Riverside 2nd produced 1167.96 pounds of butter in 305 days and 1331.41 pounds in 365 days, both world's records, displacing the former title holder in both divisions, Keystone Beauty Plum Johanna. Also it gives Aaggie a total of 2426.51 pounds

butter in two consecutive years, another world's record.

The new champion is a daughter of King Mead of Riverside, whose daughters have become famous for their splendid individuality and ability to make large short time and yearly records of both milk and butter. As a group the daughters of this sire are unique in Holstein history, for of the seven that have completed yearly records the entire number made an average of over 4 percent butter fat test during their long time tests, and only one of the seven fell slightly below 4 percent on her individual record.

A comparison of the two yearly rec-

Don't wait till next spring to get your new

DE LAVAL

With butter prices soaring no cream producer can afford to go another month without a New De Laval Cream Separator.

This is true whether you have no separator, or an inferior or half-worn-out machine, or even an old style De Laval.

In cold weather your waste of butter-fat is relatively greater, either with gravity skimming or a poor separator; and at present prices for cream a De Laval would very soon pay for itself out of its own savings.

See the nearest De Laval agent right away and let him show you what the De Laval will save for you. If you do not know the local De Laval agent, write direct for any desired information.

columns.

ords of Aaggie Acme of Riverside 2nd  
is interesting because of the fact that  
one large record was made under semi-  
official test while the world's records  
were made under strictly official test.  
Last year under semi-official test she  
produced 19,577.3 pounds milk con-  
taining 876.08 pounds fat, or an av-  
erage test of 4.47 percent butter fat.  
This year on strictly official test she  
produced 24,682.7 pounds milk con-  
taining 1065.12 pounds fat or an av-  
erage test of 4.31 percent butter fat.  
It will be noted that there was a very  
slight variation in the percent of fat  
in the two tests, and this might well  
be accounted for by the fact that on  
the slightly lower average of her last  
year's official work she produced over  
5000 pounds more milk than during  
her previous test.

Great records are developing with  
increasing frequency in the family of

Aaggie Acme of Riverside 2nd. Her  
sire is full brother to the dam of Miss  
Valley Mead De Kol Walker, 36.81  
pounds butter in seven days as a jun-  
ior three year old, the present high  
seven day cow in California and also  
the world's record holder in the eight  
months after calving division of the  
senior two year old class. Also the  
dam of Lady Hiske Walker, 34.25  
pounds butter in seven days as a jun-  
ior four year old, the California record  
in class, is a sister to both the sire  
and dam of Aaggie Acme of Riverside  
2nd, all three of them and the dam  
of the 36 pound heifer having been  
sired by Juliana King of Riverside,  
son of the former world's record two  
year old Juliana De Kol.

Two sisters of the new champion  
are now well along on yearly test and  
give high promise of exceeding 1100  
pounds butter and 1000 pounds butter,  
respectively.

## Field Notes from the Live Stock Men

Over 75 per cent of horses offered  
at sales are now being absorbed for  
war purposes.

Anyway the shortage of sugar will  
teach some folks how good many  
things taste without it.

At the Masterson sale of Herefords  
in Iowa in October Vernet Fairfax 5th,  
a three year old, sold for \$1610.

Five members of the Chicago Milk  
Producers' Association have been in-  
dicted for conspiracy in price fixing.

At the Crownover sale in Iowa late  
in October 53 head of Belgian horses  
sold for \$98,770, an average of \$1864.

Farceur, a champion show Belgian  
horse, sold at a recent auction of  
draft stallions for \$47,500. This is the  
highest price ever paid for a Belgian  
in this country.

The Virginia Hereford Breeders As-  
sociation has been organized. The  
board of directors will hold its first  
meeting at the International in Chi-  
cago.

At a public sale of Herefords at  
Amarillo, Texas, there were 59 bulls  
sold for \$25,815, or an average of  
\$437. Females—this includes young-  
sters—averaged \$364.

Pure bred Angus cattle recently  
sold at auction in Missouri at the av-  
erage of \$736. The top-notch went  
at \$2650. He was Blackcap 59th,  
calved in January, 1915.

Illinois Farmers and Grain Dealers'  
Association recently met and elected  
officers for the coming year. There  
were 351 farmers cooperative eleva-  
tors represented by 3000 delegates  
present.

A great showing of cattle, especially  
of Shorthorns and Herefords, was  
made at the Eastern States Exposition  
held at Springfield, Massachusetts, in  
October. Daily attendance at this  
show ran close around 30,000 people  
for the entire nine days.

The British government has releas-  
ed 95,000,000 pounds of Australian and  
East Indian wool for use in this coun-  
try. Much of this has already been  
shipped, and has had a tendency to  
weaken the wool market slightly. Un-  
washed Ohio wool is now quoted at  
68 cents and unwashed Delaine at 75  
cents.

Secretary Wayne Dinsmore of the  
Percheron Society of America re-  
ports that not 40 per cent of mares  
capable of breeding have been bred  
this year. He sounds the warning  
that breeders will make serious mis-  
take if this condition is not corrected.  
On the other hand it is asserted that

acute shortage of first class herdsmen  
in all lines of live stock breeding, and  
many wealthy owners of show herds  
have been scouring the country east  
and west to secure men to either fill  
places vacated by the war draft or  
places newly created by the owners  
themselves.

H. E. Vogel, Fresno County, has  
been building up a remarkable herd  
of Holstein cattle for years and is  
about ready to officially test and also  
to try the show game. He is an un-  
usually keen judge of a dairy animal  
as a visit to his ranch will prove. He  
is milking more than 80 head of reg-  
istered stock with machines and says  
they are giving the best of results. He  
is using three herd bulls, all of them  
good individuals and from heavy pro-  
ducing strains. One is a son of Segis  
Pontiac De Kol Burke, and the other  
out of a 29 pound dam. The best in-  
dividual on the ranch is the young son  
of Admiral Burke, and Mr. Vogel is  
anxious for his first daughters to  
freshen so he can put them on test.

W. J. Higdon, Tulare County Hol-  
stein breeder, has been fortunate  
enough to engage the services of H. L.  
Redd, formerly with Davis at Granger,  
Washington, to take charge of his test  
cows. Mr. Redd was with Davis over  
five years, in which time he made  
some fine records with the Davis cows.  
He is, not a college graduate but a  
man of practical experience and  
knows his business. When Mr. Hig-  
don bought the high priced string of  
Holsteins from Davis last year he  
tried to secure Redd at that time, but  
it was only a few weeks ago that his  
efforts were successful. With this ex-  
pert in charge of his best cows Mr.  
Higdon has reason to hope that he  
will add more 30 pound records to  
some of his best cows.

L. A. Denker, Los Angeles County,  
showed Hampshires at the state fair  
this year for the first time and cap-  
tured a long string of prizes. He has

## A "365" Day Liniment

**YOU ARE SAYING TO YOURSELF—**  
"If I only knew of something to stop  
that Backache—help my Rheumatism—cure my  
Neuralgia, I would send and get it at once."

**Get It.** Gombault's Caustic Balsam will give you immediate  
Relief. A Marvelous Human Flesh Healer and a never failing  
remedy for every known pain that can be relieved or cured by  
external applications. Thousands testify to the wonderful healing and  
curing powers of this great French Remedy. A Liniment that will  
soothe, heal and cure your every day pains, wounds and bruises.

## Gombault's Caustic Balsam The Great French Remedy Will Do It

**It Helps Nature to Heal and Cure.** Penetrates, acts quickly, yet is  
perfectly harmless. Kills all Germs and prevents Blood Poison. Nothing  
so good known as an application for Sores, Wounds, Felons, Exterior  
Cancers, Burns, Carbuncles and Swellings.

"I had a bad hand with four running sores on it. The more I doctored the  
worse it got. I used Caustic Balsam and never needed a doctor after that."  
—Ed. Rosenberg, St. Ansagt, Ia.

**Mrs. James McKenzie, Edina, Mo., says:** "Just ten applications of  
Caustic Balsam relieved me of gonorrhea. My husband also cured eczema with it,  
and we use it for corns, bunions, colds, sore throat and pain in the chest."

**A Safe, Reliable Remedy for Sore Throat, Chest Cold, Backache,  
Neuralgia, Sprains, Rheumatism and Stiff Joints.** Whenever and  
wherever a Liniment is needed Caustic Balsam has no Equal.

**Dr. Higley, Whitewater, Wis., writes:** "I have been using Caustic Balsam  
for ten years for different ailments. It has never failed me yet."

A liniment that not only heals and cures Human Flesh, but for years  
the accepted Standard veterinary remedy of the world.

Price, \$1.50 per bottle at all Druggists or sent by us express prepaid.  
Write for Free Booklet and read what others say.

**THE LAWRENCE WILLIAMS CO., Cleveland, Ohio**

a splendid hog ranch a few miles from Los Angeles and reports unprecedented demand for Hampshires. He sold a spring gilt to E. M. Smith, San Bernardino County, for \$100; M. L. Mohan, Los Angeles County, two gilts at \$100 each; two gilts and young boar to a breeder in Santa Clara County, and two gilts to The Guadalupe Mining Company for \$450. Mr. Denker just received a young herd sire from the East for which he paid \$1000. His name is Director, and he is by Mose Messenger and he by Messenger Boy, the only boar of the breed who was never defeated in the show ring. He is one of the finest specimens of a Hampshire boar we have seen on the coast and if nothing happens he will be exhibited at next year's shows.

A. A. Hartshorn, eminent Holstein breeder who was a visitor to California recently, has just purchased a young herd bull from the Hardy Company, of Ontario, Canada, home of the

#### GRAZING FEES NOT INCREASED

No increase will be made in the grazing fees on the national forests for the present, was the announcement made recently by the secretary of the department of agriculture, D. F. Houston, in letters to the officials of the American Livestock and the National Wool Growers' association. The decision to defer action looking toward the increase of the grazing rates on the national forests was made because of present war conditions and the fact that the stockmen have been called upon to overcome many difficulties in order to keep up the country's supply of beef, mutton, hides and wool.

#### HOLDING THE MIRROR UP TO NATURE

Honest John, the farmer, was a rather pious but close-fisted old fellow. A custom of four families in his community was for each to kill a

Little Mesa

Blue ribbon winner and junior champion at recent state fair, Little Mesa, 92772, property of L. A. Denker, Los Angeles County.

famous May Echo Sylvia, holder of several world's records, including day's milk production of 152 pounds. Mr. Hartshorn says this cow will freshen again in December and will be put on test. Her owners expect her to break more records this time as it is the first time they have been able to dry her up. The calf Mr. Hartshorn bought is King Echo Sylvia Model, out of Belle Model Pietje 2nd, 22 pounds butter as two year old, daughter of Belle Model Pietje who has three records above 35 pounds. His sire is a son of May Echo Sylvia who made 1003 pounds milk and 41 pounds butter in seven days. As his seven nearest dams average 35 pounds butter in seven days, Mr. Hartshorn considers him the most valuable young sire of the breed.

Falfadale Farm of Perris has just purchased from Peters, Lamson & Walker of Devore, San Bernardino County, the highest priced pig ever sold in that section. This boar is a son of the 940 pound Iowa state fair grand champion, Great Wonder, and out of PLW's great brood sow, Model Lady 4th, the second prize sow at Iowa last year. This sow and her litter mate are the mothers of more high priced Golden Model boars than any other sows, having produced a number of boars selling at from \$800 to \$2500 in the last year. In this young sire, the Falfadale Farm has an ideal mingling of Golden Model and Ohio Chief blood which should produce them championship material when crossed on their Grand Model sows. The price on this pig was \$150 besides PLW's reserving the second choice of his 1918 pigs. Peters, Lamson & Walker are retaining a litter brother and two litter sisters in their herd. Both firms are members of the Southern California Duroc-Jersey Association.

pig and divide it up so that all might have fresh pork about once a month during the cold season.

When his fine pig was ready, John confided to one of his closest friends that pork was mighty high and he really needed it all for his own large family. And so it was planned that the pig should be butchered and hung out to cool and in the night taken down and put away for winter's use and John could truthfully claim that it was stolen. The trick worked, but the three neighbors feasted on fresh pork while John frantically explained to his friend that the pig was actually stolen. "That's right," the friend replied, "just stick to it." "But I tell you it was stolen." "Sure; my but you are some actor. They'll all believe it."—F. L. Kern.

#### REGULATING THE SEPARATOR

The variation of the speed of the separator bowl causes a difference of from one to 13 per cent in the test of cream. The amount of milk allowed to flow through the bowl from one-half to full capacity makes a difference of from one to six per cent. The amount of acid in the milk causes an irregular variation in the test of cream, depending upon the amount it contains. When it reaches a high point, three- to four-tenths per cent for instance, and the separator is used continuously for an hour or more, it will eventually clog the same as in the case of cold milk. The cream will then become thicker until the separator is entirely clogged. The extent of the clogging will depend on the amount of acid in the milk and the size of the machine. The higher the acidity and the smaller the machine the sooner the separator will clog.

Fly a flag on the farm and teach the children what it stands for.

## The Farmer's Concrete Mixer SHELDON Batch Mixer Price \$11.50 Up

The Sheldon was designed especially for the farm. Highly praised by users. Farmers everywhere call it the ideal mixer. Used today all over the United States. A big success. Small enough to be easily moved—big enough to keep 6 men busy. Low in price. Build your own silo, tanks, troughs, floors, foundations, buildings, etc., out of concrete with a Sheldon Batch Mixer.

#### Read What These Sheldon Owners Say

I and my hired man laid a feeding floor for my hogs, 24x24, in one day; also put floor in my cow barn. My neighbor liked it so well I am not able to keep it at home.—ANDREW CHRISTENSEN, Hancock, Minn., R. 1.

We have used the mixer during past year for putting in cement foundations for a complete set of farm buildings, including silo, and liked very much.—DANA WRIGHT, Jamestown, N. D.

Last year I bought a cement mixer from you with which I am well satisfied. It did not take long for it to pay for itself and I surely can recommend it to anyone needing a big mixer at a small price.—Wm. F. PARR, Martin's, Ill.

I am more than busy with my Sheldon Concrete Mixer. Have more work than I can do. Let \$10 a day when I work out.—JESSE L. WITKE, Wellsville, N. Y.

The machine works fine. Have already got the job of mixing concrete for the bridge in this township.—JOHN ROSE, Spartansburg, Pennsylvania.

Last spring we purchased of you a set of castings to make a concrete mixer. It was constructed per the plans furnished and it surely worked great.—D. M. BRUBAKER, Freeport, Ill.

## FREE PLANS

Make your own concrete mixer. You can do it at a cost so low you can not afford to mix concrete by the shovel method. Along with our iron parts we send Free Plans and permit for making your own machine. A good way to get a practical mixer at a small expense. Or, we will sell you the complete machine, ready built.

**Make Big Money at Concrete**  
If you buy a Sheldon Mixer for your own use, you can make many times its cost in a season by renting it to your neighbors. Or, if you want to go out with the mixer on contracts, you can easily earn \$5 to \$20 a day. Our customers are doing it right now. The jobs go to the man with a Sheldon Mixer every time.

**Write for Our New Free Catalog**  
Shows our full line of mixers which are sold direct to you on strong guarantee. Thirty days trial privilege. No other like it. Patented. Two styles, hand and power. Mixes 2-12 cubic feet a minute. One man can operate it, but it will keep 2, 3, 4, 5 or 6 men busy. Continuous chain drive. Tipping dump. Easily and quickly moved. All parts guaranteed. Does work equal to \$400 mixers—sure to rot the catalog. Write today.

**SHELDON MANUFACTURING COMPANY, Box 897, Nehawka, Neb.**

#### We Ship Direct from San Francisco

We have just warehoused a carload of Sheldon Mixers in San Francisco to save you freight and time—can deliver your Mixer in three days if necessary.

No Long Wait—Lowest Freight

The Sheldon will pay for itself on first small job. Takes the backache out of concrete. Makes possible those many small improvements that add so much to the value of your land.

# PERFECTION MILKER

## The Labor Problem Solved

**ONE** man with a Perfection Milker can do the work of three men at milking time. In case of emergency your wife or your little boy or girl can do it.

The Perfection milks as the calf does—suction, downward squeeze, release. The Perfection is simple. It does not easily get out of order. No harness to bother with. The Perfection teat cup fits all sizes of teats. The pail is made of "Wear-Ever" aluminum, easy to clean and non-rusting.

L. C. Richards of Grand Forks, No. Dak., says:

"The Perfection Milker is doing fine. We milk 40 cows in an hour easily and the men like the work. With the present scarcity of help, I am afraid to think of what might happen if we did not have the Perfection."

C. E. Van Meter of Loveland, Col., says:

"The Perfection Milking Machine is giving entire satisfaction. We are saving one man's work with it on 20 cows, which will pay for the machine in 10 months."

Let the Perfection Milker relieve you of the labor problem and you will find that the world will seem much brighter.

Write for your free copy of our new illustrated catalog. You will find in it much valuable information.

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Blvd., Los Angeles, are without charge. For immediate mail answer remit \$1.00. In writing questions give full symptoms or particulars of injury of animal.

### Contagious Conjunctivitis

We have some young calves about three months old. They are fed skim-milk and alfalfa hay and run in the field during the daytime. They have sore eyes that are weak and watery. There is a white spot in the ball of the eyes. What is the cause and the remedy?—Subscriber, Linne.

It is due to a germ and is contagious. It usually affects most of the herd when once started. The light aggravates it very much, and the animals should be put in the stable and the windows darkened. In a week they will begin to improve and usually all recover their sight as good as before. It is well to bathe the eyes once a day with warm water that has some borax in it, three or four ounces to the gallon of water.

### Urinary Trouble in Hogs

Please advise me what is wrong with my hogs and what the remedy is for eliminating the trouble. They fall off rapidly and stand humped up, urinating continuously. It seems to affect only the barrows. As the cases continue they urinate blood. They all have been fed on alfalfa but some were fed grain to fatten them. Their quarters are clean? None have died yet.—Subscriber, Dyer, Nevada.

This is caused by too much lime in the water they drink. The lime causes a deposit in the sheath and nearly fills it up, making it sore, which causes the bloody urine. Turn the pig on his back and squeeze the lime out of the sheath and also wash it out with warm water. Use a large syringe and plenty of warm water with a little soap in it. The sows are not bothered because there is no place for the lime to accumulate but passes off freely with the urine. Give each a teaspoon of baking soda once a day in the feed; it will keep the

lime in solution and it will pass more freely.

### Paralysis

I have a five weeks old pig that drags his hind parts and seems to have no control of them. He is an orphan and has been fed new milk and a little rolled barley. What can I do for him?—Subscriber, Inyokern.

Give him warm, dry quarters to sleep in at night and get him out into the sunshine during the day. For treatment take several pieces of wire about the size of hay baling wire a foot or more long. Heat them red hot on one end and while still red take one at a time and puncture the skin and about half an inch into the fat beneath, along each side of the spine and over the hips. Make eight or ten punctures on each side. This will soon heal and the pig will probably walk all right again. This is the treatment recommended by the the United States department of agriculture.

### Cribbing

I have a horse that has the habit of taking hold of the fence with his upper teeth and then pulling back and in so doing letting the teeth slip off the fence and grunting. Can you tell me if this is a symptom of some disease and what to do for it?—Subscriber, Orange.

This is more of a habit than a disease. It is caused by idleness and may be accompanied by indigestion. It is almost impossible to stop it. While cribbing they usually suck some air into the stomach, which causes more indigestion. To prevent him doing it buckle a wide strap tight around the neck close to the head, but this must be loosened while he is eating or drinking. Some have been cured by cutting a muscle in each side of the neck just back of the jaw which deprives him of the power of drawing the head down and back. Only a veterinarian who knows the anatomy of the horse can do this. If you have such a man in your vicinity he may be able to do it for you.

## The Five 'G's of Poultry Feeding

Written for California Cultivator

By Jean A. Koethen

**E** SSENTIALS of poultry feeding, not only for eggs, but for meat and growth, were never more concisely stated than by the man who said

there are five g's that must enter into all feeding; grit, greens, grubs, grain and gumption. Here is the sum and substance of the balanced ration: grit for grinding; green stuff for ash and bulk and the mineral components which are necessary for regulating the liver and maintaining health; grubs for protein; grain for carbohydrates, that is, the fats and starches which make up the bulk of the body; gumption or common sense in the mixing and feeding of the ration. No matter how nourishing the ration or how perfectly balanced, it may still fail of the desired effect if it is not fed with regularity, with a careful eye for variety, and with continual regard for weather and the condition of the birds. It would be silly indeed to feed a fat hen as you would a thin one or an old hen past her best laying days as you would a pullet, and so we must place at the head of this list of g's the gumption which knows how to feed and when to feed, and which can, if necessary, take a very meager ration and feed it so wisely as to obtain ideal results. Wheat, except in its by-products, has already been stricken from our list of feeds; corn in any form is

out of the question save for those who raise it themselves; beef scrap will soon be as much out of the question as corn; fortunately we have always gumption left, and these gaps in the ration can and will be filled in by the ingenious feeder with other things nearly as good and perhaps quite as efficient in the end.

No one questions the importance of green feed for laying hens, and it is to green feed that we must look to a great extent for the filling of the gap left by lack of wheat and corn. Of all green feeds clover is the best, for it contains less water than alfalfa, considerably more sugar and starch, more ash and it has a slightly higher protein content. For some reason clover has never been largely grown in California. Probably there are some districts where it cannot be successfully grown, but there must be places where it could be grown as well as alfalfa. With a good field of clover to peck at, a flock of hens ought to be able to live and lay on a minimum supply of grain and meat.

The same thing is true of alfalfa, but in a more limited degree. A flock with unlimited alfalfa range would be almost independent of other food, for alfalfa contains protein, fat, carbohydrates and ash. Where the unlimited alfalfa range is to be found is another question, depending for its answer on

the number of hens to be fed. For a commercial poultry farm such range is absolutely out of the question; for the small farm flock it is quite possible. Most feeders cut their alfalfa and feed part of it in the moist mash when it is used, part of it alone, either in a vessel of water where it will be kept from wilting or in a trough or basket where it can be picked over and nibbled at will. Hens fed in this way never eat with the same enthusiasm that they show when allowed to forage for themselves, but it is the best that can be done and does very well if only the birds have all they want.

Next to alfalfa and clover I should put kale, because this is something of which so great a quantity can be grown on so small a patch of ground that it is within reach of every feeder, but the hens, alas! do not eat it as they do alfalfa and the more succulent greens, and it contains only about half as much protein. For this reason it is easy to see that kale, while answering the requirements of green feed, is not a substitute for grain or animal food.

Potatoes have been recommended as a substitute for grain, but they are not cheap enough in California to be seriously considered, except in the case of those which are too small to morning mash, small potatoes, potato parings, pumpkins, carrots and turnips, well cooked and thickened with middlings, ground oats or mixed mash, are ideal. Fed alone, and raw, they are unpalatable to most fowls. Just how far vegetables can be substituted for grain in supplying protein and carbohydrates is a question no one has answered yet. It remains for some enterprising investigator to put his hens on such a ration exclusively and note results.

It is not necessary to enlarge upon the importance of grit in the ration. In fairness to the hens it must be said that they are sometimes very clever in finding a substitute for grit. On soil containing considerable gravel or decomposed granite, grit is not necessary. The hens get all they need from the soil and from the clam or oyster shell which must always be before them to furnish lime.

It must always be remembered that the two fundamental needs of every animal are heat and material for building up the body. When all material for building new tissues, if the fowl is young, and for keeping the body warm, has been supplied, the hen

is ready to begin laying provided more material is given her. It is to meet these requirements that grains have been relied on. Grains are not strong in protein, but all contain some. What they contain, and what the hen needs just as much as she needs protein is starch and fat, both of which are absolutely necessary to the building up of the body. Young birds can use more starchy food than laying hens, because they have more growing to do, but they also require a good deal of protein for feathers and for the deeper tissues. A hen on a diet of hard grain alone, if she eats enough to supply protein for eggs, will soon be too fat to lay. For example, corn used to be and still is in some states the chief feed for poultry. Indian corn is about 10 per cent crude protein to 70 per cent starch and sugar. Wheat, the best of all grains, is from 12 to 17 per cent protein to 65 per cent starch and fat. Wheat is better than corn, but neither grain contains enough protein to make a properly balanced ration. For this, something else must be added.

Nobody has yet been able to exactly define protein or to isolate and examine it. It consists of various nitrogenous elements, yet we cannot call it nitrogen. White of egg and lean meat consist largely of protein. Hens that are insufficiently supplied with protein do not lay many eggs. Young chicks deprived of it neither grow nor feather as they should. Protein does the work of fats and starches when it must; nothing takes the place of protein.

Protein does not exist in sufficient quantities in grain so something containing it must be added to the ration. This something is animal food such as beef scrap or meat meal, or the cheaper fish meal. Since milk contains a large amount of protein, milk in any form—sour milk, sweet milk, buttermilk, dried milk or cottage cheese—may be used instead of the meat meal. It is easy to see how from 15 to 20 per cent of such a high protein feed added to such ground grains as corn meal or ground barley must raise the protein content of the whole. A balance of 1:4 to 4½, that is, one part protein to from four to five parts carbohydrates and fats, has been found most satisfactory for laying hens in this state. War economics requires that hens lay the year round and lay a good many eggs. For this the balanced ration is a necessity.

## 6th National Egg Laying Contest Closes

By C. T. Patterson, Director

**T**HE Egg Laying Contest at the Experiment Station of the University of Missouri has closed. Eighty-one hens produced 200 eggs or more each during the year. Eight pens produced 1000 or more eggs each during the year. One pen of five White Wyandottes produced 1226 eggs during the year.

All hens in the contest averaged 175.2 eggs each; all solid colored hens averaged 177 eggs; all parti-colored 173; black 179; white 183; black and white 172; black and red 164; birds with single combs, 173; birds with rose combs, 181; birds laying white eggs, 173; birds laying brown eggs,

176; birds with smooth shanks, 175; birds with feathered shanks, 171; Rhode Islands, 188; Wyandottes, 184; Leghorns, 178; Plymouth Rocks, 175; Anconas, 174; Sussex, 171; Langshans, 171; Orpingtons, 162; Russian Orloffs, 159; Buckeyes, 152; Fluffs, 151; Minorcas, 137; heaviest hen in each pen, 180; lightest hen in each pen, 173.

One hundred ninety-one hens which began laying during November, 1916, averaged 185.8 eggs; 47 which began laying during December, 1916, averaged 156.2; 42 which began laying during January, 1917, averaged 160.6; 5 which began laying during February, 1917, averaged 141.2; 5 which began laying during March, 1917, averaged 111.2.

Three hens which quit laying during June averaged 116 eggs; five which quit laying during July averaged 133.6; 32 which quit laying during August averaged 141.7; 79 which quit laying during September averaged,

162.8; 171 which quit laying during October averaged 188 eggs.

The following table gives the record of each variety for the year:

Variety	No. Hens	Pct. Broodiness	Pct. Mortality	Average Eggs	No. 200-egg Hens
Barred Rocks	15	85	15	173	3

### High Record Hens

Pen 35, White Wyandottes owned by J. F. Jordan, of Crane, Missouri, won the \$50 cash and silver cup, by laying 1226 eggs, which is an average of 245 eggs each. This is the highest

average ever made by a pen at this place. Pen 49, White Plymouth Rocks owned by Otto Zimmerman of St. Louis, won second place with a record

## DON'T try to Ignore FACTS

Your success with poultry depends on feeding in harmony with established scientific facts.

The scientific fact is that the lactic acid bacilli contained in buttermilk kills the CAUSE of bad bowels in poultry, it prevents and cures White Diarrhoea.

Get bulletin 162, recently issued by U. S. Dept. Agriculture, Berkeley, Cal.; a complete exposition of the wonderful value of lactic acid bacilli contained in buttermilk. Write them today for a free copy of this bulletin, it may mean much to you.

**A-1 Buttermilk Mash, containing DRY BUTTERMILK costs but a few cents more than non-buttermilk mash; learn why it's worth a great deal more.**

**Get more and better eggs. Raise more and stronger young chicks.**

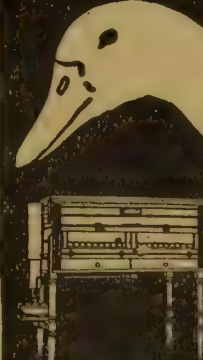

A-1 Buttermilk Mash is a feed that poultry LIKE; they eat it readily, keeps them in GLOWING HEALTH. You will find it profitable to feed. This buttermilk contains 10,000 LIVE lactic acid bacteria per cubic centimeter.

**Write today for free sample and valuable feeding information.**

GLOBE MILLS, Los Angeles

Note.—We guarantee that A-1 Buttermilk Mash contains absolutely no filler whatever; it's ALL FEED.

**For Sale**—Extra quality Defiance wheat especially released by government for seed only. Carl G. Meiners, Nordhoff (Ojal), Ventura County, Cal.

**Rhubarb**—\$127.00 from one acre. A crop every month of the year. Write to me and I will tell you how you can do as well. J. M. Stone, Lodi, Cal., Route 4.

**Mr. Alfalfa Grower**—If you want good seed at the lowest price, write me for samples and prices. Smooth Peruvian a specialty. O. C. Nordahl, Bard, Cal.

**Vetch Seed**—New crop clean seed, \$4.00 per 100 lbs. on car. Alsike, Red Clover. Price on application. Carlton Nursery Co., Carlton, Ore.

**Roses** 50 cents per dozen. Write for catalogue C and special prices. Kavan Nurseries, San Bernardino, Cal.

**New Crop Alfalfa Seed** now ready. Not the lowest in price, but high in quality. Leo Turner, Yuma, Arizona.

### FOR EXCHANGE

**Pretty 6 Room Bungalow**, 1 acre, choice bearing fruit trees, chicken houses, etc. Value \$3,000. Sell cheap or part exchange poultry, livestock. Box 615, Inglewood.

### HOGS

**Registered Durocs**—We offer for sale a choice service boar out of a daughter of Modesto King and by a grandson of Burk's Good E Nuff; young sows and boars out of Model Queen of U. F. and by a son of Golden Wonder; young sows and boars out of a granddaughter of John Orion and sired by a son of Model Col.; three young boars out of a great sow of Crimson Wonder breeding and sired by a son of King's Col. Every one cholera immune by the simultaneous method. Registered, crated free of charge. If you cannot visit us write for prices. Derryfield Farm, I. O. O. F. Building, Sacramento, Cal.

**The Billiken Brand of Chester Whites**—Entirely sold out of bred sows and gilts. Have a few open gilts of March and April farrows; also 6 boars, same age. Have 9 young tested sows to offer for late December shipments. These have each farrowed once and will be bred for a late March or early April farrow. Fall pigs, both sexes, now being weaned and will be ready for delivery during December. Good breeding stock is getting very scarce and rapidly increasing in value. If you want some of this easy feeding, mellow type, get busy with your orders. C. E. Cunningham, Mills, Cal.

**Grape-Wild Farm Berkshires**—World's Fair Grand Champion Grand Leader 2nd heads our herd, not only himself a champion but the sire of champions. At the 1916 California state fair his daughters won all of the senior sow classes including the grand champion sow. At the 1916 Oregon state fair a Grand Leader sow was junior champion. We are offering a number of choice boars of exceptional breeding and are also booking orders for fall pigs. A. B. Humphrey, Escalon, San Joaquin Co., Cal.

**20 of the Finest Boars Ever Sold** to improve the herds of pork producers. High price of pork assured because of the scarcity of breeding stock. Improve your herd with a good Poland-China boar. I have them from six to eighteen months old, priced from \$40 to \$100. Saving all sows for Kings County Poland-China Breeders' Sale, February 20. Bernstein's Ranch, Hanford, Cal. Hogs shipped on approval.

**Bargain**—Choice young Duroc-Jersey registered boar, 8 months old, son of First Choice and Advancer of Napa, \$30 if taken immediately; also a few weanlings at \$10 each. Apply San Diego Land Corporation, 401 Southern Title Bldg., San Diego, Cal.

**Superba, World's Grand Champion Poland-China** boar and one of the greatest sires of the breed. Spring boars ready for service, also few sows bred to this noted sire, reasonably cheap. Rough's Greenfields, Arlington Sta., Riverside, Cal.

**Berkshires**—First prize junior boar; first and second senior boar pigs including junior champion; fifteen spring and fall open gilts sired by Ames Rival 115, champion boar; and two junior yearling bred sows priced cheap for immediate sale. F. D. Hall, Perris, Cal.

**Rancho Rubio Durocs**—Some extra good gilts sired by Orion Model and California Keen 5th and out of my best sows. Write for prices bred or open. Weaned pigs either sex. Elmer Lamb, Ceres, Cal.

**We Pay Cash for Hogs of All Sizes,** weights and breeds. Any number from one to several thousand considered. What have you? Durbin and Forbes, 722 San Fernando Building, Broadway 4170, Los Angeles.

## YOUR HARNESS

Written for California Cultivator  
By Ida M. Blake

You fret at the harness you have to wear  
And kick at the rocky road;  
There's many a burden, many a care,  
'Tis a very heavy load.

Remember the harness is one you've made  
As you traveled from year to year;  
Yourself to blame, the price you paid  
For warnings you would not hear.

'Tis the harness of habit that binds you so,  
Fettered with sin as a chain;  
Then take thy burden, to the Lord now go,  
If vict'ry and peace you would gain.

Let God take your hand, let Him lead the way,  
Then help a brother in need.  
The harness you'll lose as night follows day,  
By doing some kindly deed.

## WHEN MARIGOLD HELPED

By Rebecca D. Moore in Youth's Companion

**C**OME, Merry Gold!" called father. "Breakfast is ready."  
"I don't like that name," Marigold said to herself. "I am tired of being just a streak of sunshine, as father says. I want to be useful. And I'm going to be, too. I'll begin this very day."

As Marigold went down-stairs to breakfast, she thought, "I must begin with father before he goes to business. I'll slip his newspaper into his coat pocket. He likes to have it rolled up neatly."

"Why, here's the morning paper," said her mother, after breakfast. "Your father must have forgotten it."

"Dear me," Marigold exclaimed, "I must have given him the wrong one! This isn't a very good beginning, but I'll not give up. What shall I do next?"

She turned, and caught sight of grandma knitting by the window; the bright sunlight was streaming into her eyes.

Marigold sprang forward to lower the shade.

Crash! Down came the roller, shade and all. Marigold had forgotten that this was the one that she had been told to touch gently. Mother had to use the step-ladder, the hammer, and the tacks before she could get the shade back into its place.

"I'm afraid I'm not being a help at all!" Marigold sighed. "I've tried twice, and so far I've been only a bother."

She wandered up-stairs. The door of Cousin Alice's room stood ajar. On the bed lay a pretty, thin muslin dress trimmed with narrow lace. Marigold noticed that a yard or so of the lace was hanging from the flounce.

"Cousin Alice must be getting this dress ready for a party," thought Marigold. "Wouldn't she be surprised to find it all mended when she gets home from school?"

So Marigold got the work-box and set to work sewing on the lace with as fine, neat stitches as she knew how to take. Cousin Alice found her there a little later.

"Why, Merry Gold, what are you doing?" she exclaimed. I was ripping the lace off that old dress to trim something else."

Marigold rushed out of the room to

hide her tears. She had sewed long and carefully to please her cousin, and again she had failed.

"It's no use. I'm not going to try anymore!" she sobbed. But Marigold was a determined little girl, and after a lively romp with Chum, her pet spaniel, she felt like her merry self.

"I will try again," she declared, "but this time I'll be sure to find something really useful to do."

Marigold looked into the kitchen, and saw yesterday's ironing still hanging on the rack.

"The very thing!" thought Marigold. "I've heard mother say again and again that she dislikes putting the clothes away more than any other part of the housework. I can't make a mistake here."

So Marigold separated the clothes into neat piles, and carried them up-stairs. All went well until she started with the last load; a little white dress of her own was on top. She did not know how it happened, but at the head of the stairs she discovered that the dress was gone. She found that it had slipped off into the coal-hod, and that it was quite hopelessly smudged with black.

"It will have to be done all over," said Marigold, sadly.

She was going up to her room to have a good cry over her failures, when grandma called to her, "Would a little girl who was very thoughtful of her grandmother's old eyes like to hear a story?"

Marigold's favorite story was drawing to a close when Cousin Alice came into the room and dropped something into her lap. It was an oddly shaped little needle-case that Marigold had often admired.

"Marigold takes such pretty stitches," said Cousin Alice, "she needs this more than I do."

"And so I can depend on my Merry Gold's having my paper ready every morning," father said, when he came home.

Marigold hung her head. "I'm sorry that it was the wrong one," she whispered.

"The wrong one!" father repeated, in a surprised tone. "I was too busy to open the paper at all. I only knew that little daughter put it into my pocket."

Bedtime was the first time that Marigold had a chance to tell mother about the soiled dress.

"But having my little girl trying to be helpful makes up for the accident," mother said, as she gave her an extra kiss.

"I thought that everything went wrong, and that I wasn't any help," Marigold murmured, "but after all I believe I'll keep on trying."

## HOUSEHOLD QUERIES

### Hominy

Please give me a recipe for making hominy. Can it be kept any length of time?—Subscriber, Ferris.

The following recipes give directions for making hominy with lye and with soda. The hominy will only keep a few days unless it is canned.

Lye Hominy—Select sound, white corn. To every gallon of corn use

one tablespoon of concentrated lye. Cover the corn with water. Boil slowly until the skin comes off easily and the dark tips on the grains begin to come out. Wash thoroughly. Let soak (preferably over night) in cold water; drain; return to the kettle and boil in plenty of water until tender; put in a stone jar and set in a cool place and it will keep for several days. It may be canned and kept as long as desired.

Soda Hominy—Cover the corn with water. Add one tablespoon of baking soda for each cup of corn. Boil till hulls are softened and may be removed easily. Drain off the soda water and wash in cold water. Rub between the hands to remove any hulls. Wash repeatedly till all hulls are gone. Add boiling water to the corn and boil until thoroughly cooked.

## ADDRESS WANTED

The Cultivator would like to have complete address of B. L. Welch who wrote "Another Question" appearing in the household department of the issue of November 10. This contributor is entitled to one year's extension of subscription to this paper, but as we have not the address it is impossible to give it.

## More Ways to Use Dry Bread

CONTINUING suggestions made last week as to attractive means of utilizing scraps of dry bread, we give the following from our readers. Next week, ways of cooking beans.

Aside from the usual toasted, steamed and bread puddings, I cut into moderately sized pieces dry bread scraps, place in deep bowl over which pour scalded milk seasoned with salt and pepper to taste. A little butter improves the taste. Dish as for mush and milk. Diluted tinned milk is very good where fresh is unobtainable. I also grind through the food chopper crumbs which I use in connection with a little flour, for griddle cakes, or where there is no grinder soaking over night in milk or water is just as good. Crusts I often cube in small pieces and fry a limited amount in with the fried potatoes. Also when by ourselves I sometimes put pieces of stale bread over the top of potatoes or hominy. For biscuits I dampen with cold water, place in a covered bake pan and place in a moderately hot oven to thoroughly heat—just as good as fresh ones. By practice and thought one can soon learn to utilize every scrap. —Mrs. Chas. E. Dack, Fresno.

To quantity of stale bread crumbs add sufficient milk to soften, and a little salt. Just before using add an unbeaten egg and beat all thoroughly until very light. Fry as griddle cakes, and serve with maple syrup, or just with butter. —L. B., Orange

Of the various ways of utilizing dry bread scraps and crusts, I think using it as a dressing, is among the best.

Place all pieces to be used in a crock or pan, and if one has a soup or broth from chicken or meat, pour this over the bread, if not, then pour hot water over it. Soup or water must be hot. Cover and let steam till soft, then mash till all lumps disappear. Season with salt, pepper and butter or meat drippings to taste, add sage if liked; also a raw egg adds to the quality of it, but is not absolutely necessary. Be careful not to get too moist. Place in a well greased dripping pan, put in the oven and bake till browned on top and bottom. Serve with a good gravy, and you will find it almost takes the place of meat. If you are roasting a piece of meat or a chicken this mixture placed in the pan around it and baked will be fine.

In case you have no meat or gravy, here is a good substitute, for you must have gravy, with this dressing. Put in a frying pan some butter or lard, place pan over the fire. Stir in a large tablespoon of flour, keep stirring this until it is a nice brown, then add milk or water and milk and stir until it is thick. —Mrs. J. F. Delzell, Lindsay.

Pancakes — Grind crusts of bread soaked for a short time through food chopper. Take cup bread crumbs, one or two eggs, one cup sweet milk or cold water, one teaspoon salt, one teaspoon syrup or sugar, enough flour or meal to make a thin or thick batter, and baking powder, if one-half quart of flour is used take one heaping teaspoon, and I sometimes use a pinch of cream of tartar. Beat thoroughly. You can use more eggs if so desired but as eggs are high cream of tartar will take the place.

Croquettes — Grind bread crumbs and prepare any meats, (leftovers) for croquettes by also grinding through chopper and add one beaten egg (or more) to one-half quart meat, one-quarter teaspoon black pepper, one-half teaspoon salt, celery salt one-half teaspoon, butter one-half size of egg if desired, but good without, dip in the bread crumbs and fry in hot fat, after shaping round or oblong. You can use the bread crumbs in same way with mashed potatoes and leftover peas, by first rolling in flour, then in bread crumbs.

Other Uses — Let sliced egg plant stand all night in salt water, drain and wipe dry, dip in beaten egg and little milk, then in bread crumbs. Fry in hot fat, (not too much) to a light brown. You can use bread crumbs to stuff peppers or tomatoes and bake

same. —Mrs. Avis I. Leeper, Lancaster.

Bread Sauce — One-half cup fresh bread crumbs, one small onion, one-third teaspoon salt, one-quarter teaspoon pepper, two cloves, dash red pepper, one-half cup milk, one-half cup cream.

Stick cloves in onion, then cook it in the milk ten minutes; strain milk over bread crumbs and cream and seasoning, and simmer slowly for ten minutes, serve at once. This makes a nice sauce for roasted fowl.

Bread Omelet — One-half cup crumbs, one-half cup milk, four eggs, three-quarters teaspoon salt, one-eighth teaspoon pepper, one tablespoon butter, three tablespoons grated cheese.

Soak crumbs in milk 15 minutes, add salt, pepper, well beaten eggs and cheese. Have pan heated, melt the butter in it. Pour in the egg mixture and place on range where it will cook evenly. When brown underneath place pan in the oven to finish on top. When done fold and turn on hot platter. This makes an excellent dish for luncheon.

Brown Betty — Two cups bread crumbs, one cup sugar, one-half cup butter, two cups sliced apples, one-half cup raisins.

Put a layer of apples in buttered baking dish, sprinkle with sugar. Add a layer of crumbs, season with bits of butter and cinnamon. Repeat until dish is filled. Then pour over half cup of water. Cover and bake slowly for an hour, then uncover and brown. Serve with hard sauce or cream.

Bread Muffins — Three cups bread crumbs, 2½ cups milk, one cup flour, three eggs, one tablespoon melted butter, two teaspoons baking powder, one-quarter teaspoon salt.

Soak crumbs for 15 minutes. Beat and add beaten egg yolks, flour, and salt, baking powder, melted butter, fold in the beaten egg whites, bake in muffin pans in quick oven for 20 minutes. —Mrs. P. H. Miller, Soledad.

Apple Bread Pudding — Fill pudding pan with alternate layers of apples and bread that has been soaked in fruit juice or rinsings of jelly or jam dishes, put sugar and a sprinkling of cinnamon on each layer of apples, apples at bottom of pan, bread on top, dotted with bits of jam or jelly. Bake three-quarters of an hour or until a jelly-like consistency. Cover until nearly done, then remove cover and brown. To be eaten with cream or any pudding sauce.

Part graham or corn bread equally as good for fruit pudding, also can be made with any canned or stewed dry fruit or jam.

Dressing to take place of Meat Course — Make with dry bread moistened with rich gravy and bits of meat left from roast or stewed meats or chicken seasoned with onion, sage, celery salt, etc. Add one egg and bake slowly, about 20 minutes to half hour.

All dry bread not needed for immediate use can be ground in meat grinder and kept in tight cans until needed. These crumbs can be used for croquettes or for frying fish that has been dipped in beaten egg. Bread crumbs used in place of crackers for scalloped tomatoes and other scalloped dishes between the layers and on top with bits of butter or cheese are very good and brown nicely.

Bread soaked over night in sweet or sour milk makes lovely griddle cakes, adding when ready to bake one egg, soda or baking powder, salt and enough corn meal, graham or white flour to make right consistency to bake. —Mrs. T. E. Wilcox, Poway.

In making cookies I use one-third sifted bread crumbs and two-thirds flour as the recipe happens to call for. In all brown bread I use one cup of sifted crumbs to two of flour; also in dark cakes such as apple sauce cakes, fruit cake, ginger cake, etc.

I also cut it up or break it in very small pieces and dry it to a golden brown in oven and serve with a little sugar and cream or rich milk, which is good and children are very fond of it on account of the crispness. Here is a good recipe.

Brown Bread — One cup dried and sifted bread crumbs, one cup rye flour, three tablespoons molasses or fruit juice, three level teaspoons baking powder, one-half teaspoon soda, one

## The Cultivator Patterns

8322—Children's Dress. Cut in sizes 2 to 10 years. The dress is cut in one piece and slips on over the head.

7925—Ladies' Waist. Cut in sizes 36 to 44 inches bust measure. One or two materials can be used for this waist.

8334—Ladies' Corset-Cover. Cut in sizes 34 to 42 inches bust measure. Garment may be made with or without the shield and peplum.

8340—Ladies' House Dress. Cut in sizes 36 to 44 inches bust measure. The dress closes at the left side of the front and the skirt is cut in three pieces.

8345—Ladies' Empire Negligee. Cut in sizes 36, 40 and 44 inches bust measure. The negligee has a three-piece gathered skirt.

7905—Ladies' Skirt. Cut in sizes 24 to 32 inches waist measure. The skirt is cut in three pieces.

7866—Girls' Dress. Cut in sizes 4 to 14 years. The long waist of this dress is attached to a three gored skirt.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

### HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 c) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

California Cultivator  
Los Angeles

tablespoon shortening, two cups of milk. Sift all dry ingredients together, then add melted shortening and milk, a little salt and raisins, nuts or any other desired fruit. Bake slowly one hour.—Mrs. W. M. Thomas, Oroville.

For Dressing — To one quart dry bread soaked in warm water until soft and squeezed out rather dry add one onion size of egg, chopped fine, teaspoon salt, one-half teaspoon each black pepper and sage. Bake with fowl or meat of any kind.

For Puddings — To one quart dry bread broken in small pieces make mixture of two eggs, 1½ pint sweet milk, one tablespoon sugar, dash of nutmeg. Pour over bread and bake in moderate oven 30 minutes.

For Betties—Dry bread in oven and grind fine. Take any kind of cooked fruit, one inch layer bread to one inch fruit until pan is full. Bake in oven 30 minutes. Serve with cream sauce or hard sauce made as follows: To one-half cup sugar mix one tablespoon flour, dash nutmeg, juice of one lemon. Pour over this one cup boiling water or cook till thickens like syrup for toast. Break bread in small pieces, toast in oven till quite crisp. Heat one quart milk to boiling point, season with tablespoon butter, pinch of salt dash of pepper, pour over toasted bread. If preferred a little thickening can be added to milk which makes it fine. Toast and grind bread as for betties and roll chops, steak, chicken, fish, in fact any kind of meat is made delicious by dipping in milk and rolled in bread crumbs, (omit egg this time of year!)

My bread can does not create half enough ends and pieces; I sometimes borrow from my neighbor. Dry bread crumbs can be used for thickening soups and gravies; also corn and tomatoes, etc. — Mrs. G. M. Dickerson, Orcutt.

\* \* \*

If Mrs. E. S. will take her loaf and knife and cut all bread at the table, there will not be much left. But if there are many leftovers put them in a paper sack and hang up to dry. Then put through the food chopper or roll with the rolling pin and use to bread fish, chops, meat patties or make a pudding. One cup sugar, one cup molasses, one cup chopped suet, two cups raisins, two cups milk, sweet or sour, (if sour two teaspoons soda, if sweet one), one-half teaspoon cloves, one teaspoon cinnamon, one teaspoon nutmeg, one teaspoon salt, four cups bread crumbs. If too dry, add a little more milk. Steam 1½ hours and eat with any kind of pudding sauce.

Can also make a dressing as for chicken. Form in a loaf in a pan and bake.

Another Bread Pudding — One pint bread, soaked in one quart of skim-milk, mashed up fine, two-thirds cup sugar, yolk of two eggs, juice of one-half lemon, beat well and bake until done, then spread top with jelly and stiffly beaten whites. Brown in oven. This is fine. — Mrs. A. J. Morey, Orland.

### KNITTED GOODS GREATLY NEEDED

So many rumors and "They say's" are rife concerning the value and uselessness of the knitting our American women are doing that we feel it wise to give much publicity to the official statement of the Red Cross published in the Official Bulletin of November 16, which is the organ printed daily by the Committee on Public Information of the United States government at Washington. This is authoritative. The statement of the war council of the American Red Cross follows:

"It is imperative that all of the sweaters, wristlets and socks that can possibly be made by the women of the country should be turned in to the supply department at the earliest possible date. With the cold weather coming on, the demand, for sweaters, especially, has been beyond the capacity of all our resources to supply."

### MADE TO ORDER

Biggs—Smawley claims to be a self-made man.

Diggs—Well, if you ever saw him when his wife is around, you would think he was made to order.

## The FOOD of The HOUR

is the food that proves its economy on a basis of food value—the greatest amount of nutriment at the least cost.

Ghirardelli's Ground Chocolate is an ideal blend of two ideal nutritious foods—cocoa and sugar.

By using Ghirardelli's Ground Chocolate freely and wisely—in place of other less nutritious and more expensive foods—you will save money and aid in food conservation.

## Ghirardelli's Ground Chocolate

Comes in ½ lb., 1 lb. and 3 lb. cans.

33; on contracts, spot, 1916 crop, 18@22;  
old, 8@15.

## RICE

California rice, new crop, cleaned, 100  
pound head rice, 6.50; brewers, 5.25;  
screenings, 5.37 1/2.  
Rough rice, 100 lbs., 3.50@3.60 to grow-  
ers at shipping points.

## HAY

Under date of December 1 Scott  
Magner & Miller says:  
Receipts past week, 1317 tons. Al-  
though these receipts were small and  
about 50 per cent of them were for the  
government, yet the balance has been  
enough to take care of all demands. The  
car situation has shown a slight improve-  
ment during the week and although most  
of this has been on account of gondola  
cars upon which a great risk is taken in  
shipping hay, yet it has been greatly ap-  
preciated by the trade and every ad-  
vantage has been taken of it. We must  
look for heavy rains at most any time  
from now on and the shipment of hay in

open cars will naturally stop as soon as the wet weather starts.

Stock hay continues in good demand as does alfalfa. A few cars of rice straw arrived and were of exceptional quality.

We quote today wholesale prices in carload lots as appear from dealers' transfers upon the hay market. For prices to consumers charges of cartage, commission and handling must be added according to conditions.

Fancy Wheat Hay, (light 5 wire bale) .....\$28.00@29.00  
No. 1 Wheat or Wheat and Oat Hay .....24.00@26.00  
No. 2 Wheat or Wheat and Oat Hay .....21.00@23.00  
Choice Tame Oat Hay .....22.00@24.00  
Other Tame Oat Hay .....21.00@24.00  
Wild Oat Hay .....21.00@24.00  
Barley Hay .....21.00@24.00  
Alfalfa .....21.00@25.00  
Stock Hay .....18.00@20.00  
No. 1 Barley Straw .....60@90

GRAIN

Grain Exchange prices, ctl.

Corn—Egyptian .....3.07½@3.10  
Barley, Feed & Brewing, cwt. 2.50@2.52½  
Oats, Red Seed, 2.80@2.90; Feed, 2.60@2.70  
New Black .....3.25@3.50  
White .....2.80@2.85

Wheat — Government prices: Common white hard, base price is \$3.50 per cental, or \$2.10 per bushel of 60 pounds delivered in terminal warehouses in bulk; soft wheat, base price 2 cents per bushel less, or \$2.08 per bushel; white club (including Sonora), \$2.06 per bushel. If wheat, after cleaning, weighs 60 pounds or more to bushel, base price stands; if 58 to 60 pounds to bushel, 3 cents per bushel reduction; if 56 to 58 pounds, 6 cents per bushel less; if less than 56 pounds, grain becomes sample grade and sells on its merits up to within 1 cent per bushel of 56-lb. wheat. Sacked wheat 4 cents per bushel more, less tare for weight of sacks.

FEEDSTUFFS

Wholesale prices per ton:

Bran .....38.00@40.00  
Cornmeal .....81.00@82.00  
Cracked Corn .....81.00@82.00  
Middlings .....51.00@54.00

Flax .....6@6½  
Rape .....2½@3

Citrus Fruit Market

Los Angeles, Dec. 5, 1917.

Some Valencias are "greening up" but quality remains good and prices satisfactory. There now remains less than 200 cars. No Navels have yet reached the auctions and private sales have been at long prices. The quality of the new fruit is exceptionally good.

The demand for lemons quickly takes up every offering.

Shipments

Shipments of citrus fruits from Southern California since November 1, 1917: oranges 1827, lemons 298, total 2125. Shipments to same date last season: oranges 1094, lemons 475, total 1569. From Central California this season: oranges 444, lemons 31, total 475. Same date last season: oranges 1150, lemons 93, total 1243. Northern California this season: oranges 29; same date last season 448.

AT THE AUCTIONS

November 30  
New York: 11 cars. Val. \$1.60-\$6.05; Lem. \$5.85-\$7.95.  
St. Louis: 6 cars. Val. \$1.15-\$3.90; Lem. \$3.70-\$4.90.  
Boston: 10 cars. Higher. Val. \$2.20-\$4.40; Lem. \$4.00-\$7.95.  
Philadelphia: 6 cars. Val. \$2.00-\$3.85; Lem. \$3.85-\$4.70.

December 3  
New York: 21 Val., 3 Lem. Val. \$2.45-\$6.35; Lem. \$4.15-\$7.75.  
Boston: 13 cars. Val. \$1.75-\$4.45; Lem. \$2.75-\$7.65.  
Cincinnati: 3 Val., 1 Lem. Val. \$1.75-\$3.55; Lem. \$4.00-\$5.15.  
St. Louis: 5 Val., 1 Lem. Val. \$2.20-\$3.70; Lem. \$2.80-\$5.40.  
Cleveland: 5 cars. Val. \$1.45-\$3.70.

December 4  
New York: 6 Val., 2 Lem. Val. \$2.05-\$6.05; Lem. \$4.00-\$7.15.  
Pittsburg: 1 car. Val. \$2.95-\$3.20.  
Boston: 18 Val., 1 Lem. Val. \$1.95-\$4.00; Lem. \$7.35.

MONTHLY WEATHER AND CROP BULLETIN

Except in the extreme northwest counties the rainfall during November was much less than usual. The deficiency was proportionally greater in the southern half of the state. This lack of moisture caused a shortage of feed for range stock, especially in the coast counties south of San Francisco and in the foothill districts of the southern portion of the Sierras. Some cattle have died on this account, but so far the losses have not been heavy. The dry weather also seriously hampered fall plowing and not so much of this work has been accomplished as usual. Should good rains occur in December the acreage in wheat will be considerably larger than last year. As near as can be determined about half of the fall seeding of wheat, barley and oats has been done, but very little has yet germinated, and that which has come up, does not show a good stand in most places.

A large number of our crop correspondents mailed their reports before the rains on November 30, and as the rain on that day was quite general over the northern half of the state, grain and pasture has undoubtedly improved greatly north of the Delta counties in the last two or three days.

The weather was favorable for finishing the harvest of rice and beans, and for the digging of potatoes. These crops all turned out better than expected.

There were a number of frosty mornings in the Sacramento and San Joaquin Valleys, but they did no damage of consequence. The cool nights, however, prevented much growth and alfalfa and clover are now dormant.

An excellent crop of tomatoes has been secured in fine condition, and lettuce in the Imperial Valley is well advanced. The raisin crop in San Diego County was large and of good quality. Oranges and lemons are ripening satisfactorily and the fruit is sizing up well. Shipments of both are steadily increasing.

MARKET NOTES

Beans are being held firm; producers are in no hurry to sell, and demand is very light because of uncertainty of the future market. New York reports Mich. Whites, \$14 to \$16; Colo. Pintos, \$9.00 to \$11 per hundred pounds; Cal. Small Whites, \$14 to \$15; and Cal. Limas commanding about 25 cents above the Whites.

The government crop report places this season's olive pack at 60 per cent of normal. This will be the smallest pack in years for California. Packers in California assert that this estimate is still too high. No such price for olive oil has ever been obtained as at the present time.

Shortage of shipping is causing famine of bananas and prices are advancing rapidly.

In a large purchase in San Francisco by the army and navy from a delegation of Northern California bean growers a price of 11 cents for Whites delivered at terminal points was made. The purchase was made through Ralph Merritt, California food administrator. This was a slight increase over prevailing quotations on the market. The average cost of producing an acre of beans is approximately \$40, or maybe \$45, per acre. The average yield is less than 1000 pounds.

The bureau of markets, United States department of agriculture maintains in Los Angeles an office for collection of data as to shipments daily from the

state, and is at present working with voluntary contributors in the field who send in post card notices of shipments. These are not complete, but give fairly good idea of totals. During the past week the shipment of raisins totalled 154 cars, the week preceding 231. Dried apples this week, 13 cars; prunes, 42; dried pears, 1; dried peaches, 15; dried figs, 3; dried apricots, 1; mixed dried fruits, 3; beans, Limas, 7; dried, 49; mixed fruits, 16; apples, 27; casabas, 3; grapes, 15; tomatoes, 6; celery, 35; lettuce, 36; mixed vegetables, 29; potatoes, 19; peas, 1; sweet potatoes, 7; cauliflower, 21.

Raise more on less acres—intensive farming does not necessarily mean growing special crops and garden truck. In ordinary farming it means doubling your crop on the same acreage or cutting your farm in two, and growing as much as you did before. Too often a farmer is measured by the number of acres he operates while his actual farming ability is shown by the quantity and quality of farm products he produces per acre. With the right kind of management, it is possible in many localities to make 80 acres produce more crops and more profit than the average quarter section.

DO YOU USE THIS METHOD OR THIS

Time is the stuff of which life is made  
you can't afford to waste it carrying water

Help is scarce—and growing scarcer every year on the farm and everywhere

You can't afford to utilize labor carrying water  
—it makes water too expensive

Put up a redwood tank and install a redwood pipe line  
—it's the sanest investment you can make

In the long run its economy of time labor and money  
—besides it's a lot of real satisfaction

Ask our engineering department to tell you what it would cost to install a redwood tank and pipe line on your place

Very likely you'll be surprised at how little it will cost and certainly you'll be glad when you have it working for you

Water for the house and for the stock—where and when you want it, is the modern up-to-date method for the progressive farmer

Redwood tanks and pipe lines outlast all others and cost less in the first place

## Seven 18-Mile Trips to Town by Motor Truck in One Day

That is what Mr. Walter Faber did with his Maxwell one-ton truck during the last season.

Mr. Faber is a successful farmer living nine miles out of Wayne, Nebraska.

He believes in applying business methods—efficiency methods—to agriculture.

So last spring he bought a Maxwell one-ton truck.

In that truck he hauled to market EVERY-THING his farm produced. Said Mr. Faber:

"I made seven trips into Wayne and back each day with my Maxwell truck—just five more than I could possibly have made with horses."

Among the crops truck-marketed by Mr.

Faber were corn, oats, wheat, hay, potatoes, etc.

He hauled 10,000 bushels of shelled corn—55 bushels, that is, 3080 pounds, to the load.

That was more than 50 per cent overload.

Mr. Faber's truck cost no more to keep going than one team of horses.

Now most of his neighbors are planning to buy Maxwell trucks.

What are you going to do? Continue using slow, expensive horses? Or buy a low-priced, economical and swift Maxwell Truck?

Your nearest Maxwell dealer has the trucks. See him.

*One-ton truck chassis, \$985; Chassis with cab and windshield, \$1025; Chassis with box body, \$1035; Box body with windshield, \$1075; Express canopy body, \$1095; Chassis with stake gate body, \$1080

## May God Be With You on This Christmas Day!

**T**HE accustomed merry greeting comes slowly to our lips because our full hearts mean so much, much more. Nor would we show a gloomy face. Could gloom have entered radiant Bethlehem that Christmas night so many centuries ago, when Mary bowed her head above her Son, and shepherds knelt in adoration of the Child who came to save the world? Yet we know their hearts, uplifted in a solemn exaltation, must have told their joy through tremulous lips. So on this day, when we commemorate His birth, our hearts are filled with that same holy joy. Never have they been so purged of flesh and self; never have our spirits touched so close the spirit of the Infinite; never have we followed in the path Christ trod with eyes so clear and unafraid. And, as we set our feet upon the road that leads to our own bitter Calvary, we hear, above the roar of cannon and the weeping of our desolated hearts, the song that rang above Judean hills: "On earth, peace; good will to men." And as Christ gave His life that we might live, on this, His Sacred Day, we consecrate ourselves and our beloved to the brotherhood of man He taught us. For we see, as we have never seen before, the honor of the world, our honor; its pain, our pain; and, through the promise of This Day, its joy, our joy.

**T**HERE are engines that cost more money—but you can't buy a better farm engine at ANY price than the Fairbanks-Morse Type "Z," or one that operates more economically.

Next to its low operating expense—extreme simplicity is the secret of its popularity. No makeshift attachments—nothing added for ornamentation or just for "talking points"—an engine that will deliver the engine performance you want.

Think of buying this combination in one engine: Simple—light weight—substantial, fool-proof construction—gun barrel cylinder bore—leak-proof compression—complete with Built-in Magneto—and then, the feature of quick starting even in cold weather.

When you see this combination on your dealer's floor, you—like thousands of other farmers—will not be satisfied with any other engine for all-round farm engine work.

**THE SERVICE YOU GET FROM

## A Tempest in the Vacuum Pan

Sugar Refiners Make No Proposition Which Growers Will Accept. Ralph Merritt, California Representative of Hoover, is Unable to Coordinate Growers and Refiners, and Los Angeles Mass Meeting Ends in Uproar

**A**T the mass meeting of sugar beet growers and sugar manufacturers at Los Angeles last Saturday, State Food Administrator Ralph Merritt remarked that were it not for the shortage of transportation facilities the Pacific Coast would be drained of its sugar supply and consumers would be buying at the most in one pound lots as they are now buying in the northeastern states of our country. He also spoke of the growing need and of real suffering caused by shortage of sugar or, rather, absolute dearth of sugar, in France for a time. This was partly relieved by stripping the eastern markets of sugar and sending it to relieve the suffering in Europe. Now the Pacific Coast sugar is needed to give relief in those sections stripped. But in spite of all his appeals and his statement of the serious condition confronting all the world, the sugar manufacturers and the beet growers failed to get together.

The beet growers feel that injustice has been heaped upon injustice for years, and notwithstanding they will yield to none in answering their country's call, they do not propose to be a cat paw or be forced into the position of giving enormous profits to the manufacturers, while they exhaust the fertility of their land and run all chances of loss. They propose to produce food needed by America and our Allies in some different form rather than submit to these injustices longer.

Practically every beet grower lost money last year. This was partly due to conditions over which they had no control. At the same time evidence brought out by the grand jury of Los Angeles County was in effect that enormous profits were made by all manufacturers. It has been alleged that this profit was in excess of 100 per cent in at least one or two cases.

Some time ago Mr. Merritt wrote to beet producers, asking certain questions which brought to him over 2600 letters in reply. At the same time he called a conference of sugar manufacturers in the city of San Francisco. Then he called for a meeting of growers and manufacturers in Los Angeles on December 8. Blanchard Hall was filled, and every moment of the time from the first fall of the gavel until Mr. Merritt left for his train was fraught with intense interest and at times with no little commotion.

After hearing from the beet growers, those owning lands used for beet production, from Prof. Vaile, and others who have been making investigations as to beet production, costs and averages, Mr. Merritt called on the manufacturers for any statement they might wish to make.

Henry T. Oxnard of the American Company read his statement in effect that while the last season may have been profitable to the sugar manufacturers, many of the preceding seasons had not been so profitable, and many of the years had resulted in no dividends to the stockholders. He referred to the offer of the sugar companies to pay \$7.00 on the 15 per cent basis, and said that the manufacturers had decided they would give an additional 50 cent bonus per ton providing 80 per cent of last year's planting was made by all the beet growers of Southern California, and another 50 cents if

there were 90 per cent of last year's planting.

Plainly this offer was not acceptable to the growers. Mr. Merritt turned to Mr. Oxnard and asked him that the 90 per cent feature be left out of consideration, offering the growers \$1.00 bonus for 80 per cent of last year's production. This the factory men acceded to, but this offer also was refused by the beet growers, or rather, no action was taken, for by this time the meeting had become almost unmanageable, and there was no chance to put through parliamentary procedure.

The position taken by the growers was in effect that they were willing to

We did not learn from Prof. Vaile as to whether the above costs are based on farm labor and other costs or on next year's probable costs. Also as to taxes, interest, overhead, etc., assume that they are included in the \$30.12 rental.

District Attorney Woolwine was at the meeting. He made a very short talk and appealed to the growers and the factory people to let true patriotism guide in the entire matter and get together and produce a greater crop than California has ever produced. He asserted that if there was not

grow beets under a just division of the profits. While the government has made no definite price on sugar, there is a certain amount of control which gives practical guarantee to the manufacturers of a reasonable price another year. The beet grower feels that he is taking all the chances of weather or any losses which may come to his field during the period of several months. This may result, as it did last year, in a net loss. For the manufacturer then to take whatever beets are produced and make enormous profits, with the grower shouldering his loss as heretofore, or even if the chances are that such will result, he frankly says that he will not, because he cannot, grow beets with labor and other conditions as they promise to be.

The facts secured by Mr. Merritt from his more than 2000 letters showed that the production is not far from ten tons per acre. Prof. Vaile's canvass of portions of Orange and Los Angeles Counties shows the average to be 10.3 tons. This covers a period of from 1904 to 1914 inclusive, or 11 years. The average test was 17.75 per cent, or 2 3/4 per cent above that on which the base price is fixed. Mr. Vaile says that with that average and at the price offered by the factories for the coming year at the mass meeting, the returns to the growers would be about \$90.35 per acre, and if land rental is figured at one-third of the crop, which is above the average, \$30.12, the total cost of producing beets is \$84.84, which would leave a net of only \$5.50 per acre. The costs of production given by Prof. Vaile are:

Per Acre	
Field operations	\$44.05
Equipment charges	4.47
Interest on working capital	1.20
Supervision	5.00
	\$54.72

a getting together he would take the matter to Washington and, if necessary, directly into the halls of congress.

In making his appeal to the growers Mr. Merritt read the following telegram from Food Administrator Hoover:

"You must remember that the United States shipped 100,000 tons of sugar to Europe in October. There is a sugar shortage in the East, and in New York it is impossible to buy more than one pound of sugar at a time. The reason we have sugar in California in abundance today is because there is a shortage of rolling stock to carry it to the Atlantic seaboard. But we sent 40,000 pounds East last week and 20,000 pounds for the first half of this week.

"Don't be fooled that Germany is being starved. She is down to bedrock, but she is still a going concern, and she is going to remain a going concern.

"There are men here who feel that the food administration is being run by the sugar trust, but any man who accuses the food administration of being nonpatriotic knows not whereof he speaks. The food administration has eliminated the speculation in food during the period of the war. California hasn't begun to face the food problem. Last week we shipped from this state 55,000 tons of foodstuffs, and that is just a starter.

"The total production of foodstuffs in California this year increased 25 per cent over the greatest production year we ever had, and that is a wonderful contribution to the cause. But I fear there will be a reduction in the acreage of sugar beets planted in California for 1918, and if that happens California will fail to do its full share in the war. The sugar companies paid little or no dividends up to 1916, but after that they made enormous profits.

"The sugar refineries have made money in 1917, but they would have made far more if they had not voluntarily come to the government and signed a working agreement. Now the beet sugar refineries are operating under a federal license and the government shares their profits in form of taxes.

"We have not set a price for the beet sugar crop because it is not within our power to set such a price. But our control over the companies is now absolute and if the companies break their contract in any way, we can rescind the license. No one can predict today what the price of sugar will be next year. If this war should end next year, the price of seven cents a pound will tumble."

To give an idea of the trend of feeling among the growers we quote from the daily press from a statement made by Clarence Dougherty, a beet farmer of Artesia:

"Our own trusts are riding the backs of the producer and charging exorbitant prices to the laborer, and are the true allies of the kaiser," he asserted. "They are starving France as much as the U-boats. The food profiteer and the kaiser are one and the same. Children are already suffering from hunger in our cities.

"To shout against profiteers in general is one thing, but to lay your hand upon a wealthy and powerful member of the community, and say, You are the guilty party," requires a different brand of courage. To give battle to a group of wealthy men like the sugar barons of New York, as skilled in politics as in finance, requires a high order of courage."

The California beet growers are not alone in the situation in which they find themselves. The following telegram received by District Attorney Woolwine from an association of beet growers in Utah gives an idea of how widespread is the distrust of the sugar factory management:

"Salt Lake City, Utah, December 3, Hon. Thomas Lee Woolwine, District Attorney, Los Angeles, Cal.: Dear Sir: Have just noticed in the Salt Lake Tribune a dispatch stating that a grand jury in your county has probed the sugar situation and that you had telegraphed results of the investigation to President Wilson and Food Administrator Hoover.

"We have been fighting the sugar crowd out here for a year past. Conditions are quite as bad as they are with you. The farmers feel that they have had enough of beet growing and the industry has reached the point where the government must intervene in behalf of the farmer.

"The beet growers in this state are organizing under the corporation laws and are standing together in the Intermountain Association of Sugar Beet Growers.

"Under separate cover I am mailing four pamphlets, one folder and a copy of a petition which is being circulated among the growers. These will give you some idea as to what we are doing. The facts stated in the folder as to the sugar company's business are positively accurate. They are precisely what the company's books will show. Have other data that might be of use to you. If so it is yours for the asking. If you will furnish the names of your grand jurors will be glad to mail them literature.

"Our fight is the same as yours. We want to help you and want you to help us. If you will write particulars concerning the results of your investigation will appreciate it. If we can do anything for you let us know. Very truly yours.—Intermountain Association of Sugar Beet Growers. C. G. Patterson, Secretary."

## The Quality of Fruit and When You Get It, are What

**Stark City**  
**roots mean**  
**Quality Fruits**

Your investment in young trees is small compared to your investment in land and time.

It is poor economy to buy any but the very best rooted and sturdy stock. A few cents saved on the purchase price of a tree now may mean a year or more lost before the trees begin to bear. It may also mean still greater loss in the quantity and quality of the fruit when you get it.

## Stark City Grown Trees of Wm. P. Stark Nurseries

have unusually heavy, vigorous roots, due to scientific care—plus the right combination of soil and climate. Stark City is on a high rolling plateau, in the heart of the Ozark Country. The soil is a rare highland limestone formation, with just the right amount of grit. Trees grow extra large and heavy-rooted during our long season of bright sunny days and cool nights. These heavy roots store unusual vitality which enables the trees, when transplanted, to establish themselves quickly and make satisfactory growth. Our trees will thrive wherever the variety of fruit is grown successfully.

### Read What Growers Say:—

"Your trees are the hardiest, best rooted stock we receive, well packed and in good condition."—H. B. M. Hall, Quarantine Inspector, Calif.

"The 16,000 J. H. Hale peach trees we bought of you for our ranch near Mentone, Calif., are doing exceedingly fine."—R. Schiffman.

"Trees arrived safely and I am much pleased with them. They were packed so carefully not a root or a bud was injured."—J. B. Hershey, Calif.

"After having written six of the leading nurserymen in western and eastern states and upon receipt of their literature, I have selected you to be it."—Mrs. Lucy Miller, Calif.

### Our Trees are Guaranteed

1st.—To Reach You in Prime Condition. 2nd.—To be True to Name. 3rd.—To Live and Make Satisfactory Growth. You Are to be the Judge.

### We Sell Direct from Nursery

No agents or other middlemen represent us. This is the only way you could be sure of getting Stark City grown trees. Our prices are fixed and reasonable for the finest grade stock. We burn trees which don't come up to our standard.

### Free Service to Our Patrons

Not only is it necessary to get good trees, but also to care for them. We will gladly confer with our customers at any time and will give them the benefit of our experience and help. This service is free. Our book "Inside Facts on Profitable Fruit Growing," is a complete guide to successful fruit growing. Our book "How to Beautify Your Home Grounds," shows how to lay out your grounds, care for ornamentals, etc. These books sell for 10 cents each, but are sent free with orders.

## 1918 Fruit Book FREE

Illustrates and describes best fruits of all kinds, color, quality, ripening season, hardiness, growing habits, which are best money makers for your section. Apples, pears, peaches, plums, cherries, quinces, grapes, bush fruits, everbearing strawberries, shrubs, shade trees, etc.

ROF. I. J. Condit writes us that another meeting of fig growers will be held at Fresno. He writes:

"You probably know of the success which attended the fig institute which was held last January at Fresno. Those who attended the meeting seemed to get a great deal of benefit from it, and have mentioned it many times since. We are therefore planning to hold a second meeting of the fig growers on Friday and Saturday, January 4 and 5, 1918. The program will be along the following lines:

"Morning session: Report of committee on organization, E. Newby, chairman; Benefits of Cooperation, Organization and Standardization, F. H. Wilson; Symposium, The Best Soil for Fig Trees and its Treatment, Including Cultivation, Fertilization and Irrigation, led by F. Yokum; The

Year's Development with the Kadota Fig, L. C. Beckwith, discussion led by Sam Clarke.

"Afternoon session: The Maslin Seedling Fig Orchard and its Relation to Smyrna Fig Culture in California, by W. T. Swingle and G. P. Rixford; Symposium, How Can We Improve the Quality of our Dried Figs, discussion led by Henry Markarian. Notes from various other speakers. As a feature of the program a special exhibit of figs and fig products will be made. These will include brands of dried figs, fig paste, fig jam, canned figs, preserved figs, crystallized figs, glace figs, fig marmalade, etc. Specimens of such products will be very welcome indeed.

"The second day will be given over to field demonstrations and conferences on pruning, top working, examination of soils and roots, etc."

## Income Tax

Written for California Cultivator

WHAT is income was reasonably fully answered in last issue on Page 574, but here comes a question from a subscriber at Redlands:

"Will money received in 1917 on 1916 bills be considered as income of 1916? I mean on contracts that were wholly completed in 1916 and on which payment was due before 1917?"

### Delayed Payments

This question was submitted to the revenue office, and a very definite answer received that "money received in 1917 is a part of the 1917 income." Likewise expense of 1917 must be considered by itself, and the expense in growing the crop or in completing a contract in 1916 may not be deducted from amount of income in 1917.

Therefore we put at the revenue officer this question—which we admitted was extreme: In some counties in the fall of 1916 taxes were allowed to go over until January, 1917. This fall the time for paying taxes was not extended. Hence the first payment of 1916-17 taxes was made in January; the second in April; and the first payment of the 1917-18 taxes was made the last of November or the first of December of 1917; three half yearly payments within the 12 calendar months.

The answer given to this was equally as positive as that regarding the income. "The transactions as shown by the cash book from January 1 to December 1 are the deciding factor."

### Foster Child

"As I understand it an additional allowance of \$200 for each dependent child is exempted. Is this allowable in case of foster child taken care of from infancy?"

The law says: "Provided further, that if the person making the return is the head of a family, there shall be an additional exemption of \$200 for each child dependent upon such person, if under 18 years of age, etc." "Dependent child" answers the question to the effect that dependency is the determining condition rather than relationship.

### What are Expenses?

An Ontario subscriber wants to know what really are the expenses on the farm.

This is a long question for there are all kinds of farms. However, a short answer may be given in that any money paid out for actual upkeep of the farm or for growing a product constitute legitimate expense. This is more fully brought out in the column which follows:

"Now let us see what the government allows the farmer to deduct in the way of expenses. The government says in a general way, that the farmer may deduct as his expenses, 'all necessary expenses actually paid within the calendar year in carrying on his business.' Then the government through its law department proceeds to define just what are necessary expenses actually paid that may be included, and then some items that

must not be included. It is a long list. First comes what the government calls deductions proper, and then it lists under a second heading of deductions losses that the farmer may put down in the deduction column. Taking up the deductions proper as many as can be thought of are given below.

"Deduct all taxes actually paid during that year, except for local benefits and income taxes. By local benefits, is meant local drainage, roads, etc. Deduct all interest actually paid on personal indebtedness including interest on a mortgage on the home if any. All insurance except on your own dwelling. All actual cash paid for hired help, not including boarding, washing, or any product of the farm. All seed, grain, hay purchased for planting or food for stock. All stock bought for resale, stock purchased that dies, or is killed by order of the authorities of a state or the United States. If insured or reimbursed, the loss, if any, to be deducted is the difference between the price paid and the amount received. Any debts due the farmer made since March 1, 1913 that he has used every effort to collect, or are not outlawed, are expenses to be deducted.

"A reasonable allowance for depreciation of property, except on the farmer's own dwelling and contents occupied by him, but on property used in business such as machinery, implements, farm buildings, etc., is an allowable deduction. The treasury department has approved deductions made on account of depreciation in the following percentages; 10 per cent on cost of machinery, implements, etc., five per cent on frame, 2½ per cent on brick or stone buildings. Depreciation to be deductible must be an amount that fairly measures the loss occurring, during the year for which return is made, by reason of the use, employment, or obsolete character of physical property and must be based on the cost of the property sought to be depreciated and the probable life thereof, taking into consideration the material of which constructed and the uses in which employed, etc. He can charge off for deterioration, the same amount each year until he has charged off the amount of capital invested, that is, the cost of the property."

However, specifically the Ontario grower wants to know as to groceries and repairs of implements, etc.

Here are two separate questions. The purchase of groceries or the use of products of the farm for the family may not be considered as a part of expense of upkeep. On the other hand, products of the farm consumed by the household should be reckoned in the income of the farmer.

The Ontario inquirer also wishes to know as to what losses may be deducted.

As to losses we quote again from the Eagle of Wichita:

### Losses That May be Deducted

"Under deductions called losses, the following list can be put down.

"Losses sustained during the year in business or trade or from fires, storms, or theft, not compensated by insurance or otherwise, the value of

the property lost to be that of a fair market value. He cannot deduct for loss of his dwelling or contents if he was living in the dwelling at the time of loss, as that was a living expense. But if he loses machinery, implements, barn, granary or any other property used in farming this may be deducted. "He cannot deduct for loss anything produced or raised on the farm such as stock, grain, hay, lumber, but can deduct for anything purchased, such as breeding stock, work horses, seed wheat, food for stock, etc. For example, a man loses by fire a field of grain, or hay or stacks of grain or hay. He has no insurance. His loss is complete. He cannot deduct his loss because he is not required to report his grain as income until sold or exchanged for cash or the equivalent, therefore, it cannot be deducted from his income.

A loss is not deductible if the market was down when he sold, and had been higher before he sold. He cannot deduct from his income any amount paid on debts, or investments, or for purchase of Liberty bonds. Nor can he pay his income taxes with Liberty bonds, but can with the interest secured from them.

"If a farmer sustains a loss in an investment outside of his farming he cannot deduct anything unless he has made profit in other outside investments. Then he can deduct the amount of his loss in one investment if such loss is equal to the profit in the other investment, or he can deduct that proportion that equals the profits, if the profits are less in the one investment than the loss in the other investment." This is considered speculation. He cannot deduct for alimony paid, as that is a personal expense. He can deduct for contributions or gifts, not over 15 per cent of his net income, to corporations or associations exclusively religious, charitable, scientific or educational, and to societies for prevention of cruelty to children or animals, when no part of the net income of such corporation or association inures to a private stockholder or individual.

### Losses Not to Be Deducted

"Here are some of the items that a farmer is not to deduct as expenses: No personal, living or family expenses. Also no share of expenses of partnership, as the partnership is considered a separate business and the farmer reports as income the amount due him in profits after the partnership has paid all expenses.

"He cannot deduct cost of permanent improvements, or betterment of property, machinery, implements, automobiles, tractors, etc., as that is capital investment, but he can deduct cost of small tools, nails and the like, and repairs, expenses of running his machinery, tractor, etc., but not the cost of running automobile, unless used solely and exclusively in and for business. The farmer can not deduct for the use of his team, his own services or the services of any minor member of the family, as all have a personal interest in the farm.

"A farmer cannot deduct as expenses interest on indebtedness incurred by purchase of obligations or securities, the interest on which is not taxable. This means, that if he borrows money to buy government, state or municipal bonds, the interest on which the government says shall not be taxed, he cannot deduct as expense the interest he has to pay on this borrowed money. Such bonds are Farm Loan Bank bonds, Liberty bonds, etc.

He can deduct for all stock bought for resale, but not bought for breeding or for use."

### CAMPAIGN OF RAISIN GROWERS

**A** WHIRLWIND drive on the raisin growers of the state is to be conducted from now until February 1. The first contracts have expired. A new and better one is presented to the growers. The board of directors, composed of Wylie M. Giffen, James Madison, Hector Burness, H. Graff, A. G. Robinson, H. H. Welsh and A. G. Wishon, is sending out to all raisin growers, the following letter:

"All crop contracts held by the California Associated Raisin Company expire with the present crop; new contracts must be signed if the present method of marketing our crops is to be continued, and a new contract is now

Citrus Nurseries**

Box 67, SAN DIMAS  
CALIFORNIA

FOUNDED IN 1889  
AT IT 29 YEARS

being presented to you for your signature. The new contract has been most carefully prepared, and the weak points in the old contract eliminated. Under it we shall have more capital with which to do business and provide badly needed packing houses; thus obviating much delay and annoyance in delivering the crops. It provides for higher prices at the time of delivery on Muscats, Malagas and Feherzagos; for approximate settlement on each variety when entirely sold, and gives the growers every cent received for the raisins, less only the actual cost of manufacturing and selling and eight per cent earnings on the capital stock of the company.

"We believe now, as we believed two years ago, that our value to the industry depends largely upon the control of the crop, and unless at least 125,000 acres are signed up under the new contract by February 1, 1918, all contracts taken will be returned; thus each grower is confronted with a question, vital to every man, woman and child in the raisin growing district: Shall we continue our cooperative plan or return to the old time competitive methods? In answering that question it should be borne in mind that we are better prepared to serve you than ever before. We began our work handicapped by a large holdover of the preceding crops. This condition has been changed and we will start under the new contract with practically a bare market. We began our work with limited capital and facilities and uncertain credit, making many things absolutely necessary then, such as the payment of large sums of money in rentals for packing houses, which can and will be avoided under the new contract.

"In the main the work accomplished speaks for itself. There is, however, one point thoroughly misunderstood, and that is in regard to the higher prices supposed to be received by the outside growers. The facts are that the growers of Thompson Seedless and Sultana raisins have received more per pound for every crop handled by us than have the outside growers. It is true that a few outside growers have sold at the end of the

season each year for a figure higher than was received by the Associated growers, but from 90 to 95 per cent of the outside growers sold their crops before the Associated named prices and sold them at figures much under our prices. One illustration that is still fresh in your minds: During the spring of 1916 practically all of the outside Thompson Seedless raisins were sold from five to six cents per pound, whereas on that same crop our growers received over six and one-half cents. Even on Muscats the 1916 crop has netted the Associated growers one-quarter cent per pound more than the average price received by the outside growers. With the increased efficiency of the organization and the savings possible under the new contract our settlement, as compared with the outside grower, will be even more favorable than in the past.

"Mistakes have been made in the past, as they will be in the future, but in spite of every argument that has been made, and every criticism that has been thrust at us, there is one fact that stands out beyond and above everything else, and that is that 580,000 tons of raisins have been grown and sold in the past five years, and every ton has brought more than \$65 per ton. The price has been three and one-quarter cents and up instead of three and one-quarter and down. Both as to production and price this is a record unequalled since the raisin business assumed large proportions, and it is on the strength of this record that we now offer this new contract for your signature.

"California has taken the lead of every state in the Union in intelligent marketing of farm products, and your own organization was a pioneer in this work. Our success so far has been heralded far and wide, giving courage and support to many similar movements in other lines, so that the result of the campaign upon which we now enter determines not alone the prosperity of ourselves, but in a much larger measure than we realize, affects the welfare of the state. The eyes of California are upon us today, and let no man falter! '125,000 acres and then some, by February first,' is the slogan."

## Home Pickling of Ripe Olives

By Frederic T. Bioletti

These directions are suitable for preparing small quantities for home use.

Gather the fruit carefully by hand, without bruising. It is best when cherry red or just turned black. When green, it lacks flavor and oil and when over-ripe, it is too soft and the skin is tough. Soft, shrivelled, or frost-bitten olives are unsuited for pickling.

Place the olives in an open vessel of glass or earthenware, or a wooden bucket or barrel. Metal vessels should not be used. A wooden cover to fit loosely inside the vessel on top of the olives will prevent the spotting of any olives which float.

Make a lye solution of three ounces (three tablespoons) of soda lye to a gallon of water or approximately one pound to five gallons.

Cover the olives with this solution, keeping them submerged by means of the wooden cover. Stir and examine the olives every hour. As soon as the skin changes color, cut an olive occasionally to note by the discoloration of the flesh how far the lye has penetrated.

When the lye has gone through the skin but only a short way into the flesh, pour it off into another vessel. This will be in from three to eight hours, according to the olives and the temperature.

Expose the olives to the air until the color is darkened and equalized. They should be stirred frequently while exposed. To make them all black requires from one to three days or more, but the flavor is better if not exposed too long.

When the desired color is attained, replace the old lye by fresh lye and leave with frequent stirring until it has penetrated to the pit. It must reach the pit or the olives will be bitter, but if left long after reaching the pit, the flesh will be softened and the color bleached.

Replace the lye with water which should be replaced twice daily, until

all taste of lye is removed—about five to seven days.

Then place for twenty-four hours in a brine of five ounces (five tablespoons) of salt to a gallon of water.

Then heat the olives and brine to boiling and pour hot water into scalded jars or cans. Cover and seal and place in a pot or washboiler sterilizer and heat for one hour.

N. B.—Certain olives, such as Manzanillo, darken easily when aerated even if they are somewhat underripe. Others, such as Mission, will not darken if underripe unless exposed for a very long time. Over exposure injures the flavor. It is better to be satisfied with imperfect color than defective flavor.

Before sterilizing the brine may be poured out of the jars or cans which are then sealed immediately while still hot and sterilized as above. They keep quite as well without the brine.

## Queries

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

### Postage

Any inquiry which comes to the Cultivator for treatment in this department is answered most willingly and without cost to the inquirer, that is, of course, presuming the inquiry is of general agricultural interest. The same is true of the veterinary and the legal departments. Where immediate mail reply is requested of our veterinarian, this calls for the sending, direct to him, of \$1.00 fee. This is a matter in which the Cultivator has no part whatever, but quite often matters of general agricultural interest are asked and requests made for mail reply. Usually in such cases the

When writing advertisers, mention the Cultivator.

postage for reply is enclosed, but occasionally the inquirer forgets or neglects this, and with the large number of inquiries coming it is quite a factor. We prefer not to answer by mail but where it is possible answer through the query columns. Another feature is brought to our attention by a correspondent, one who had written an article for the paper and unfortunately his post office address was given. It was along a line which created considerable interest, and he writes to please call off the correspondents who write asking him questions only of personal interest "and in 75 per cent of all these inquiries no postage is enclosed for my reply. I am willing to take my time, write letters, and furnish the stationery, but when the inquirer has not sufficient interest to enclose a three cent stamp, I do not think his interest is sufficient to justify my going to the extent of a long letter which is usually required in these inquiries." Where a man writes the Cultivator for advertising rates, or any other business matter, or writes any business house along a line which may lead to business for them, it is the province of the house to pay its own postage and seek after the business, but unfortunately many make personal requests without observing the slight courtesy of making the work as light as possible to the one from whom the favor is requested.

Beet Pulp for Chickens

Is beet pulp good feed for laying hens?—Subscriber, Pasadena.

Sugar beet pulp, either fresh or dried and soaked in water, has been used by poultrymen as a substitute for green feed, but it contains too little ash to be a satisfactory substitute for the more succulent greens, and too little protein to be of much use for laying hens. Since it consists mainly of sugar, starch and crude fibre, it might be used to a limited extent to feed birds that are to be fattened, but care should be taken not to feed so much that the fibre clogs the digestive organs. The composition of fresh beet pulp, according to Professor Jaffa's table is : Water, 90 per cent; ash, .36 per cent; crude protein, 1.15 per cent; starch, sugar, etc., 6.25 per cent; crude fibre, 2.11 per cent; crude fat, .13 per cent. Dried, it contains: water, 9.80 per cent; ash, 2.97 per cent; crude protein, 8.10 per cent; starch, sugar, etc., 53.03 per cent; crude fibre, 25.45 per cent; crude fat, .65 per cent. I have not known of beet pulp being used as a substitute for any of the grain feeds for hens, and should be glad to hear from anyone who has tried it.—J. A. K.

Peanuts

Would like advice about raising and yield of peanuts, also how they are prepared for market and sale price.—Subscriber, Pomona.

Time was when California produced hundreds of cars of peanuts. Today she is producing practically none for the reason that other crops have proved far more profitable. This has been especially the case since the importation of large quantities from the Orient. The Japanese peanut is inferior, but the same has filled the market at such low price that Americans have found no profit in it. Orange County used to be the principal peanut growing section. Peanuts are planted the same as corn, on well pulverized, light, friable soil. Plant to a depth of six or ten inches from early April till the first of June. Distance between rows is determined partly by quality of soil, usually about three feet. Kernels are dropped in row 12 to 20 inches apart. They are harvested much as are beans, that is, cutting the roots, winnowing and stacking. The harvesting should be done in October or early November before the rains have started. The picking is usually by hand. The price some years ago ran around 40 cents per sack which held about 40 pounds. After the hand picking the vines with the cull nuts remaining make excellent feed for hogs and cattle, but not for horses.

Watsonville has shipped out about 150 carloads of apples so far this season. Oakdale, Stanislaus County, has shipped out a big output of almonds, amounting to 15 cars, nearly three times last year's crop.

BUY TRACTORS TO HELP FARMS, U. S. PLEA NOW

By H. B. Hunt

WASHINGTON, Oct. 9—Uncle Sam's farmers must motorize for the war.

That is the decision of government officials here who have been studying ways and means of increasing farm production when army drafts and war industries are taking hundreds of thousands of young men from our farms.

The only solution is to increase the productive capacity of the farm labor remaining. And the most practicable means of enabling each plowman to turn two or three furrows instead of one, and harrow 25 or 30 acres a day instead of 10, is to put our farmers on modern farm tractors.

Cleveland Tractor

YOU must motorize your farm. Stern necessity demands it. Patriotism urges it. In that way alone can you counteract the shortage of labor and produce the bigger, better crops America expects of you.

Patriotic, progressive farmers are helping both their country and themselves by the use of the Cleveland Tractor.

This remarkable little machine hauls two 14-inch bottoms and with them it plows up to 3½ miles an hour—8 to 10 acres a day. That is more than you possibly can do with three good 3-horse teams and their drivers.

It not only plows faster—but better and with far greater economy.

Because it *crawls on its own tracks*, the Cleveland can go practically anywhere—over ditches and gullies—even through the sand, gumbo and rice swamps of the South. It enables you to plow exactly where you want and when you want.

The Cleveland will not pack even a mellow seed bed—because it is light—only 2750 pounds—and has 600 square inches of continuous traction surface—a bearing pressure of less than five pounds per square inch. Though small enough for use among young fruit trees, it possesses tremendous power. It gives 12 horsepower at the drawbar, plenty for plowing, harrowing, pulling the manure spreader, seeder or any hauling job. At the pulley belt it develops 20 horsepower for pumping, sawing, cutting ensilage, filling silos and other stationary work.

The Cleveland Tractor is designed and built by Rollin H. White, the famous motor truck engineer. Mr. White uses scrupulous care in his choice of materials. The gears are identical with those of the finest trucks and are enclosed in dirt-proof, dust-proof casings.

In short, the Cleveland Tractor means to you—*an increased yield—better, faster work—at much less cost.* What could be more important today?

Write us now for a complete description of the Cleveland Tractor and the name of our nearest dealer. We advise ordering now for use in the spring.

Address Dept. BF or use the coupon.

# Making Sorghum Syrup

By A. B. Ballantyne of University of Arizona Extension Service

**I**N RESPONSE to many inquiries concerning the making of sorghum syrup the following suggestions are offered, based largely upon the experience of Martin Mortensen of Thatcher, Arizona, a practical sorghum grower and syrup maker.

## Mills and Evaporators

Since the making of syrup will require the attention of one man practically all of the time, it is important that the equipment be large enough to justify his attention. A number two, or a number three roller power mill and an eleven or twelve foot evaporator will usually do this. The main requirement of a mill is that it shall get all of the juice, and shall be large enough to keep an ample supply for the evaporator. Where farm power engines of sufficient power are available, a three roller power mill would be desirable. Have it trued up on a good, solid foundation. The power mills will cost from \$75 up. Best results have been secured by many from the sectional evaporators since the heat can be controlled very satisfactorily, and the work is more evenly distributed.

## Varieties of Sorghum Cane

Goose Neck, or as it is sometimes called, Texas Seeded Ribbon Cane, yields well, 200 gallons and over per acre, and some of the best syrup makers in the Gila Valley prefer it. The syrup from it, however, is somewhat darker than from the Sumac or Red Top Cane. The Amber Cane is a short season variety adapted especially to the colder climates. Goose Neck Cane requires about ten days longer season than Sumac, but yields more syrup and is of a better body.

## Cutting the Cane

To make the best syrup the leaves should be stripped from the cane and of course the tops also cut off. Stripping also offers the advantage of reducing the amount of skimming by half, and gives a greater yield of juice from the stalks, since when the leaves are not removed they absorb part of it as it is pressed out and the leaves that are crushed impart an undesirable flavor and increase the amount of dark solid particles that are often noticed in sorghum syrup.

When the cane reaches the "roasting ear" stage or when the seed is in

the stiff dough and until it becomes hard, is the proper time to cut it for syrup making. The earlier cut cane—or the juice from it—will require more boiling but will produce a finer flavoring syrup than that from the cane cut when the seed is hard, though the yield of syrup will not be quite so great as from the later cut cane.

Be sure that the cane is cut before frost, as standing after having been frosted impairs the quality and flavor of the syrup made from it. When the sorghum is mature it can be stripped, cut and piled in small piles and covered from freezing and be worked up later. Sorghum so handled will require much less evaporating.

## Making the Syrup

Scrupulous cleanliness in making syrup will be repaid by the superior flavor of the product, as well as in its superior keeping qualities. Repeated cleansing of the juice containers and the syrup pans is necessary.

As the juice runs from the mill it is important that it be strained, preferably through a flannel cloth, though several thicknesses of cheese cloth or a fine wire strainer will do.

As the syrup is removed from one section of the evaporator to the next, repeated skimmings of the coagulated scum will be necessary. Skimmers are usually flat with perforations in the bottom.

When a stick dipped in a cooled

sample of the syrup in the last section shows it adhering well—not running off and leaving only a thin film—then the boiling is completed and the syrup is ready to be strained again into the sterilized cans in which it is to be sold.

Sixty gallons of syrup in an eight hour run from an eleven foot evaporator is an average day's work. Where it is run 24 hours of course the production will be increased accordingly.

## Marketing

A superior quality of sorghum syrup attractively packed should find a ready sale in any community. It is far superior to the corn syrup commonly found in our grocery stores and should be handled by our grocers to the exclusion of the imported corn syrup. This should be done from a sense of local patriotism if from no other motive. But makers of sorghum syrup should be sure that their products are attractively put up in containers adapted to the trade and above all things be sure that only quality products are branded as such.

## COST OF GROWING WHEAT

According to figures given in the Farmer and Stockman, a lot of eastern wheat producers are growing wheat and selling for less than actual costs, even at present prices. That is, 14.22 bushels is the average per acre, and many are producing less than the average. As may be seen from the following figures there is a net loss. Here they are as given from an eastern standpoint.

The cost of wheat production for this year is given as follows:

Plowing	\$1.75
Disking	.35
Two harrowings	.50
Dragging or rolling	.25
Drilling	.55
Seed	2.50
Cutting, twine and shocking	2.00
Stacking	2.15
Threshing	1.00
Marketing	.60
Binning	.30
Hail insurance	2.40
Fire insurance, six months	.23
Soil Fertility	2.40
Interest on land	5.00
Taxes	.60
Depreciation on improvement	.25
Depreciation on equipment	.50

\$23.23

It is pointed out that the average yield of wheat in Oklahoma for the past 20 years has been 14.22 bushels per acre. Thus at \$2 a bushel, the acre income would be \$28.44. Deducting from this the cost of production and the cost of marketing—35 cents a bushel—a profit of only 33 cents per acre would be obtained, which is the same as no profit at all.

## RED CROSS MEMBERSHIP DRIVE

W. L. Hathaway, chairman of the divisional committee of the Pacific division, writes that "there will be a Christmas Membership Campaign which will extend over a period of eight days, starting December 17 and concluding the evening of December 24. Prior to the campaign for membership the organization of the forces in the various chapters is quite essential, and the results during the campaign for membership largely depend upon the perfection of the organizations within the various chapters."

Before the war the United States was almost at the bottom of the list of nations in the matter of membership. We believe there were less than 200,000 members at that time. It is anticipated that the present drive will bring the membership of the American Red Cross up to at least 10,000,000. Let every one who is not a member of this organization support it at least to that extent.

## BLACK MOLD OF ONIONS

The discovery of black mold in the onions of California gives to onion growers an additional problem and should make for very careful planting and cultural methods.

Adding to information given in a former Cultivator, Assistant Botanist Wayne Van Pelt of the Ohio agricultural experiment station writes regarding treatment of soils: "I have planned for more extensive experiments as to control measures the cur-

## A GIBRALTAR for STRENGTH

Long experience in machinery manufacture—thirty-five years of it—careful selection of best wearing materials—right design and solid construction have made the "Caterpillar" Tractor a Gibraltar for strength.

Years of experience in tractor designing and building, and intimate knowledge of materials have contributed to the perfection of "Caterpillar" Tractor construction.

The "Caterpillar" Tractor, on that account, stands today without an equal for efficiency or economy. The records it has established in every class of work, in every part of the world, under every sort of condition, prove its superiority. What the "Caterpillar" Tractor has done for others in reducing costs and increasing profits, it can do for you.

We will gladly send you details on all models.

**FREE PRICE LIST**

rent season and will be pleased to mail you my results. Results from last season's experiments show that sets immersed in formalin solution, one pint or pound of 40 per cent formalin to 33 gallons of water, for a period of six to 12 hours, freed the sets entirely from black mold, with no injury to sets. Results from solutions of copper sulphate gave unsatisfactory results."

### WHEN PUTTING THE TRACTOR AWAY

If you aren't going to use your tractor for a while do these things when you put it away" is the suggestion of one of our biggest tractor companies in a recent circular:

#### Here are the Things:

If you are going to lay the tractor away for a while, you should, when stopping the tractor on its last run, pour a pint or more of oil into each priming cup and then shut the motor down immediately afterward. This oil will be drawn into the cylinders and will coat the valves and valve stems with an oil film which will protect them from rust.

In putting a tractor away, it should be looked over very carefully to see that all parts of the cooling system are drained thoroughly. If the tractor sits high at one end or the other, water may lodge in certain places, and if freezing does not damage, it will rust the parts and in time cause trouble.

The user of a tractor will find it a paying proposition to house the tractor at all times when it is not in service. However, if it is not housed, there should be something placed over the stack of the radiator which will prevent snow and rain getting in, and a tarpaulin or canvas large enough to cover the motor complete used, as the motor should not stand out and take the weather.

The fuel tanks should be drained and protected so that it will be impossible for water to get into them. If the last time the tanks are filled with fuel a pint of cylinder oil to each five of fuel is put into the fuel tanks, it will leave an oil film on the inside of the tanks which will be very beneficial in prolonging the life of same.

Also in putting away a tractor the user should make a note of all parts that will be needed to put on the tractor when it is put into service again, for if you wait until then you are not only liable to overlook some of these parts but there may be a delay in getting them promptly.

Remember, it is the little oversights that are most expensive and cause the greatest delays.

### COOPERATIVE PURCHASING

"Cooperative Purchasing and Marketing Organizations Among Farmers in the United States," Bulletin 547 of the United States department of agriculture, gives in condensed form the early history and growth of cooperative organizations, present forms and tendencies, statistics, types of cooperative organizations, financing and business practices, cooperative laws, list of publications on cooperation. It is written by O. B. Jesness and W. H. Kerr. Any cooperator who may wish this information may have the publication by writing United States Department of Agriculture, Washington, D. C., and remitting 20 cents.

December 15, which is interest payment day on the first series of liberty loan bonds, is the time set by the treasury department as best for exchanging the first issue of three and one-half per cent for the second of four per cent issue. Anyone wishing to make this exchange should see his bank at once and surrender the bonds of the first issue. The right to convert the first liberty bonds into the new or second series must be availed of prior to May 15, 1918, and December 15 being the interest payment date the exchange is more easily effected.

Put the farm machinery in first-class order. An hour spent in repair may prevent later on a day of despair.

A silo is more than granary. It improves feed as well as storing it.

## Wade's Drag Saw More Than Pays for Itself in One Season

—saws 25 cords in a day

**Big Profits. Small Expense. LITTLE WORK.**

The Wade Is the Biggest Labor Saver Ever Invented.

**WADE'S GASOLINE WOOD SAW**  
(Portable)  
**DELIVERED**  
Freight Prepaid  
Anywhere in the U. S.

**\$165**

This little saw is revolutionizing wood cutting! Hundreds of farmers are cutting 25, 30 and even 40 cords of wood in a single day—men who used to spend 10 to 12 back-breaking hours to cut three or four cords. Just think—the WADE cuts a 40-inch log in five minutes.

### 1918 MODEL—4-H. P. ENGINE

The new WADE is equipped with our powerful little 4-H. P. Engine, besides SEVEN other big outstanding features that make many users like G. H. Northrup, of Clearwater, Wash., say . . . "and I would not take twice what I paid for it—" Simplicity and efficiency is the keynote of the 1918 WADE.

**Does 10 Times the Work of 2 Men**

**THIS WEEK'S COVER**

The sentiment on the cover of this issue takes little space in wishing a "Merry Christmas," but it does express a feeling which generally obtains this year that, so far as we may, this should be a season filled with joy, and such joy as comes from service to others. These are wonderful days for the American people, and the great question of all is; "Are we living up to the best of our opportunities?" May this Christmas time cause us to consider those opportunities. A happy augury of a brighter year is the capture by the British forces of the city of Jerusalem, which, after five or six hundred years in the hands of the Turks, now has a Christian flag flying over it.

**SUGAR BEETS**

The southern end of the state of California produces more beet sugar than any other section of the United States of similar area. With the present shortage, and with probable shortage a year from now, the entire country is looking to this state to do its duty, but unfortunately a condition has arisen which makes it improbable that California will produce within 75 per cent of its last year's output.

For years the beet growers have felt that they have not had just treatment from the manufacturers. Last year scarcely a beet grower in the state made money. A far greater number lost and lost heavily; this partly because of weather conditions; partly because of labor conditions; partly, some growers say, because the factories would not take the few beets they could raise at the proper time, and the sugar content was lowered by the delay; partly because, other growers say, they did not receive pay for the full sugar content. In any case, they

lost money, and are in a more or less rebellious frame of mind, and this because the sugar manufacturers never coined money so rapidly as last year.

According to the statement of District Attorney Woolwine of Los Angeles County the profit on the original investment of some of the factories was even more than 100 per cent. This difference in the enormous profit to the manufacturer and the loss to the grower has driven a great part of the growers to decide to plant cabbage, beans or other crops whose marketing will not be exclusively controlled.

The result of the mass meeting in Los Angeles Saturday is given on another page, and while we believe Food Administrator Merritt has only a desire for greater production of sugar, the growers unfortunately have a feeling that he is friendly to the factories. At present writing District Attorney Woolwine contemplates taking the matter up with congress, and latest reports suggest possible indictments because of combination in restraint of trade.

Instant action only will result in

"And thou Bethlehem, in the land of Judah, art not the least among the princes of Judah; for out of thee shall come a Governor, that shall rule my people Israel."

The "Governor" who was a shepherd to His people, to all peoples, came, and for nearly 2000 years has brought joy to the world, the King of Kings and the Prince of Peace. But he never cried "peace when there was no peace." When he came there was a Herod, a sinister figure, drunk with the thought of his own "destiny," and to remove all possible barriers from the accomplishment of that destiny he decreed that all babies under two years should be slaughtered. All in Judea, perished, save One who escaped to Egypt. He returned, and ever since we have observed His birthday. It is the period of the year's greatest joy; greatest because we give most greatly at this time. Let this year be no exception. There is still an Anti-Christ; there is an awful conflict of nations; there is outraged justice, a demand that arrogance, that tyranny, that the awful barbarities of a people drunk with lust of war and of power, stop. The principles of Jesus are not on trial, but the human race is. The barbarities shall stop and on God's terms of peace.

Meantime Christmas is here! If not Merry, it may be Joyous at least in the passing of joy and helpfulness on to others.

anything like ordinary production. Many sections should have finished planting prior to this date.

**ANNUAL REPORT**

Secretary Houston's report for 1917 gives a review of agricultural conditions, gratifying to every well-wisher of America. He calls attention to the unsatisfactory situation at the time of the declaration of war in respect to foodstuffs and feedstuffs. The production of 1916 was comparatively low, for example, corn and wheat and other cereals aggregated 4,806,000,000 bushels as against 6,010,000,000 bushels for 1915. Even for normal times the production for 1916 was desperately low, but for a nation entering a war the situation was exceedingly serious.

The report tells how this condition was met by the farmers of the country, acting as one man in patriotic response to the appeal for greatly increased production. Amongst the successful methods they followed to accomplish this were the purchase of additional machinery and equipment, working together in local organizations to increase and equalize the market, stimulation of home production through home gardens, the food saving campaign, conservation of all kinds of perishables, together with the market news service and fertilizer service, purchase and distribution of seed, and making the most of labor and other forces. The secretary ends his report with:

"The spirit revealed by the farmers and the results of their efforts during the present year indicate that they recognize the responsibility resting upon them in this emergency. 'I am

confident that they will patriotically continue to assume and to bear their full share of the country's burden. The farmers of the nation have always shown their devotion to the cause of freedom and have not been slow to respond to their country's call for men and means to defend its rights. They will not submit to Germany's dictation. They will not permit her to impose illegal restrictions on their privilege of going freely to any part of the world where they have a legal right to go or of sending their products into the open markets of the world. They will realize that the dictum of Germany that this country should not send its ships at will to the ports of great nations of Europe was not only unwarranted and impertinent, but also that, if it had been acquiesced in, it would have involved them very particularly in great direct financial loss and suffering. As the meaning of this struggle is more fully revealed, as it becomes increasingly clear that a contest is again being waged to determine whether the world shall be dominated by the will and policies of medieval despotisms or by those of free and enlightened modern states, and whether the mere right of might or the rule of law shall prevail in the world, and it becomes more obvious that the surest way to force a righteous peace is to employ effectively all the resources of the nation, the farmers will increase

**This Week's War News**

This has been a wonderful week for the Allies.

The most disquieting feature of the week's news is the claim by Berlin that Germany has secured from Russian and Rumanian armies on the Rumanian front the signing of a three months' armistice. The Rumanians are said to have stipulated that no German troops might be transferred from the Rumanian front to other points to oppose Allied forces.

A terrible explosion of munitions at Halifax has killed probably 2,000 people, injured 6,000 and rendered homeless 25,000. Blizzards have swept the city causing fearful suffering. The cause of the explosion has not been determined. So far as reports indicate it was accidental, though many German residents have been arrested by the police and careful investigation is being made.

Italy is declared safe from the Austro-German forces by official cable from Rome. The great Teuton plunge into Italy did not even succeed in reaching Venice, but was halted at the Piave River by what is called the most successful operation of the Allied forces next to the battle of the Marne. With the coming of winter the Teutons face enormous difficulties in keeping their supply lines open over the frozen passes leading to Austria.

The Germans are massing troops and supplies on the western front in the Cambrai and other sections, with the evident intention of making the biggest drive of the war on the Allies before they can be reinforced by any considerable number of American troops. Our declaration of war against Austria and the speeding up of American plans for getting to the front at once seem to have convinced the Germans that American help is after all going to be a thing to be reckoned with, and that soon.

First in interest, no doubt, in the week's war news is the taking of Jerusalem from the Turkish forces by the British under General Allenby. So ends the Turkish-German attempt to push through Palestine, take the Suez canal and overrun Egypt. Jaffa, the seaport of Jerusalem, was captured by the British more than a month ago, and a slow enveloping movement undertaken to preclude necessity for a violent attack which might destroy sacred and historic monuments in the Holy City. General Allenby, accompanied by commanders of French and Italian troops, made his formal entrance into Jerusalem on Tuesday.

Japanese forces are in control of Vladivostok, the eastern terminal of the Trans-Siberian railroad on the Sea of Japan. Presumably they are acting in concert with Russian government forces and the Siberian government which is opposed to the apparent intention of the Bolsheviks to make terms with the Germans. This move will safeguard to the Allies the great quantities of foodstuffs and other supplies sent from this country and other points, now awaiting shipment to Petrograd. Harbin is reported to be held by Chinese troops. It is at the junction of the branch of the Trans-Siberian railroad running down to Port Arthur at its crossing of the Sungari River.

The situation in Russia seems as dubious as ever. The action of the Bolshevik forces in attempting to conclude an armistice with Germany is condemned by manifestos issued by a number of non-Bolshevik Socialist bodies and the Executive Committee of the Peasants Deputies. They declare it "only the action of a party of usurpers. The armistice does not bind Russia, nor any part of it, pending the decision of the constituent assembly." The People's Commissary of Agriculture has issued a proclamation declaring "all lands, with their living and slaughtered stock, all the buildings and the produce of the lands, national property under the management of the land committees."

We are Hooverizing—observing the very letter of the law on meatless Tuesday and wheatless Wednesday, but unless we observe somewhat its spirit on other days of the week and save staples to the limit, we may say with the poet after he had finished all the tin cans and began on the pieces of the mirror: "This surely is food for reflection."

ingly put forth their strength, send their sons to fight at the front and see to it that neither this nation nor those with which we are associated lack anything in the way of materials for food and clothing. It is incumbent upon them, as it is upon all other civilians, to work and to save, to seek no mere selfish advantage, and to reveal the same spirit of devotion and willingness to make sacrifices and to give all they are and have which animate the soldier in the trenches, if this struggle is to be brought to a satisfactory conclusion. Every facility that this department can command to assist them will be freely placed at their service."

**REVISIONS**

Senator Johnson recently made a speech in Los Angeles in which he referred to the fact that there was need for revision of the war tax bill because of the injustice of allowing the munition manufacturers to make almost untold millions of profits, and suggested that the present session of the legislature would correct this. As it is, these enormous profits are taxed only to the same extent that other business interests are. Why they should not pay 50 to 60 or even a greater percentage of these swollen profits into the war treasury the common people fail to see.

While on this point, is it not proper to ask why the congressman should deprive himself of the patriotic service of paying the small percentage of the war income tax on his salary as well as those who elected him to office? It is reported that members of congress are planning in the present session to remove this exemption from their salaries that they may stand before their fellow countrymen in a more favorable light. Now come the teachers of our young people with the claim that as state and county employees their salaries are exempt from the war tax. These are certainly not inspiring examples of patriotism to the children who are being educated for future citizens.

# Agricultural News Notes of the Pacific Coast

## Northern California

Mendocino County is organizing and wants a farm adviser.

Cloverdale recently shipped a car of high grade Franquettes.

A farm center has been organized at Moraga, Contra Costa County.

E. A. Gammon is president of the Sacramento County farm bureau.

Placer County's tomato crop will be materially decreased by killing frosts of last week.

Concord, Contra Costa County, recently made a shipment of 19 tons of California walnuts.

Butte County is now harvesting her cotton crop which as yet is merely an experimental proposition.

Grape growers at Cloverdale, Sonoma County, have contracted their 1918 wine grapes for \$35 per ton.

Car shortage is making the moving of barley very slow, and farmers are restive under inability to sell.

The farm center at Colfax, Placer County, is pursuing a course of study in fruit growing, poultry husbandry, etc.

There are about 17,000 acres of bearing pear orchards in California and nearly 24,000 acres of non-bearing orchards.

The Grange at Bennett Valley, Sonoma County, recently elected Hans Mortensen, master; Miss Marie Beutel, secretary.

Pear growers of Lake County are organizing and will unite to market next season's pear crop at more satisfactory prices.

Glenn County will add 6000 acres to its wheat acreage, and it is hoped the rice acreage will be at least 10,000 greater.

Oakland claims to have made the record with the biggest poultry show ever held on the Coast. In the poultry division there were 2000 fowls.

Sacramento County farm bureau meetings are to be held December 18, at Carmichael; 19, Del Paso; 21, Cosumnes; 26, Hood; 28, Franklin.

The Humboldt County Dairyman's Association met last week in connection with the creamerymen and discussed the matter of greater production next year.

Grain farming is materially decreasing at Byron, Contra Costa County, for lands are being subdivided and planted to sugar beets and other more intensively farmed crops.

Sacramento County estimates she will produce 65,000 acres of wheat. The greatest production will be in the Natomas district. This is 30,000 acres more than were planted last year.

Nearly 60 Sacramento County orchardists recently made a trip up into Placer County, inspecting methods of orchard work in that diversified fruit county. This is a type of institute which is very valuable.

As we go to press we have wire from State Horticultural Commissioner Hecke that the committee to handle the labor question, according to resolution of the recent state fruit growers' convention, is now named, except for one more producer from the South. The list is: F. B. McKevitt, Sacramento; Frank Wilson, Dinuba; P. F. Cogswell, El Monte; George W. Pierce, Davis; C. C. Dunlap, San Jose; R. C. Merryman, Exeter; George C. Roeding, Fresno; George H. Whitman, Concord.

## Central California

Supervisors of Kings County have voted to provide funds for a farm adviser.

Construction on the Terra Bella irrigation project has been practically completed.

The Three Rivers district of Tulare County will this year ship out eight carload of apples.

Manteca, Stanislaus County, gets a new tomato cannery which will be built at a cost of \$50,000.

The Stanislaus board of trade reports that it has succeeded in supplying much labor to farmers.

The California Peach Growers, Inc., has made definite plans for building a new packing plant at Hanford.

Another large seed farm of over 3000 acres is being established in San Joaquin County, near New Hope.

Merced County farmers have estimated each jack rabbit to destroy at least \$5.00 worth of farm products.

A series of vine and tree pruning demonstrations has been held by the county farm bureau of Fresno County.

The farm bureau center at Claus, Stanislaus County, is discussing beans and how to grow more and bigger and better.

County Farm Adviser Jungerman of Stanislaus County has been holding interesting hog feeding demonstrations at Modesto.

Stanislaus County grain growers have almost entirely completed their seeding and are now saying, "Let the rains come."

San Joaquin County this year had a big output of beans, not only because of increased acreage, but heavy yield on practically all land planted.

In a recent survey of Kern County it was found that the wheat acreage of the county would be increased about 3500 acres over the acreage of 1917.

The navel orange section of Tulare County is now shipping oranges which stand up to the eight to one test. The crop is less than 50 per cent of normal.

The Associated Raisin Company has started a big campaign to secure signers for its new contract. "125,000 acres of raisins by February 1" is the slogan.

Orange growers of the Springville district of Tulare County are now busy picking. Growers in the Success district are also beginning to pick their crop.

One thousand acres will be planted to grain on the Kearney Estate near Fresno, now the property of the state university. Plantings will be made of oats, barley and wheat.

Jack rabbit control is the topic of farm bureau meetings in Madera County. Some of the sections have killed as high as 2000 rabbits, and these have been sold for sufficient to pay for shotgun shells.

Horticultural Commissioner Roulard has asked fruit growers of Fresno County to make plans to welcome the semi-annual convention of the fruit growers of the state which will be held at Fresno this spring.

The California Prune and Apricot Growers, Inc., has begun suit against Geo. N. Herbert, a packer, for \$100,000; also for \$160,000 worth of dried fruit which was turned over to him by members of the Growers' Corporation.

## Southern California

A new farm center hall is to be built at Nuevo, Riverside County.

This season's pack of sardines and tuna has been unusually large.

Chino, San Bernardino County, is moving for a cow testing association.

A local farm bureau has been formed at Lankershim, Los Angeles County.

Grain smut treatment and rabbit poisoning are items of discussion in San Diego farm bureau meetings.

The sugar and bean crops of Orange County will, it is estimated bring to that county this season \$14,000,000.

The 1917 cotton crop of the Palo Verde Valley of eastern Riverside County will this year total 8000 bales.

Chatsworth, San Fernando Valley, is the site of a 2500 acre storage reservoir which gives practical guarantee to producers of that valley.

The dehydrating plant connected with the American Beet Sugar Company's plant at Chino took care of 1200 tons of pulp every 24 hours.

Chino, San Bernardino County, is still working for its cannery which is to be on cooperative lines similar to those of the Ontario cooperative cannery.

The Thermal Cantaloupe Growers' Association reports cost to shipper of 1½ cents per crate this season, against three cents last year and five in 1915.

Market gardeners of San Diego County are to be advised in their spring planting by Specialist Ryan of the United States department of agriculture.

Inspector George Wilson who has been employed in the office of the Riverside horticultural commission has now taken up work with the state quarantine office in San Francisco.

A tomato cannery at Oxnard is now contracting for 1918 tomatoes at the rate of \$12 per ton for delivered stock or \$7.50 per ton on vine. This is materially above last year's prices.

Shippers of oranges and lemons will be required to load refrigerator cars seven boxes wide and two high along the entire length of the car, under a food administration order effective December 1.

Sugar bowls will be removed from tables in all restaurants, beginning Monday, according to orders received from the food commission by Los Angeles restaurant keepers. Sugar is sugar these days.

Prof. Vaile of the citrus experiment station at Riverside has been making investigation of cost of growing sugar beets in Southern California. Members of the Associated Beet Growers of Southern California have turned over their books to him.

Farmers of Imperial Valley have organized the Imperial Valley Water Users' Association and appointed a committee to go to Washington to consult with Secretary Lane as to making connection at Laguna. It is hoped to have this connecting canal ready by July.

E. J. Houser, poultry expert of the state college of agriculture, addressed a gathering of poultrymen of the Arlington section of Riverside County one afternoon last week at the poultry farm of J. M. Davison. Similar meetings will be held at various farm centers throughout the county.

## The Coast and General

Montana has found success in growing sunflowers for silage.

The Ohio state university is making a campaign on hog cholera.

There are 20,000 acres of pineapples planted in the Hawaiian Islands.

Honey producers of Oregon and Idaho met at Ontario, Idaho, this week.

The University of Arizona is conducting a series of extension schools in the Yuma Valley.

The English house of commons has agreed to disfranchise conscientious objectors to serving their country in the army.

Arizona live stock people are still talking about the great show of pure bred animals recently made at the state fair.

The International Apple Shippers' Association is closing up its campaign for 100 cars of apples for the boys in the trenches.

More than half the bean crop of the Salt River Valley of Arizona has been destroyed by recent fires thought to be incendiary.

A produce dealer of Washington, D. C., has had his license revoked by the food administration because of allowing two carloads of potatoes to spoil.

Governor Cantu of Lower California, has ordered 300 young men, in that country to escape the American draft law, to cross the border.

Agents of the Arizona commission of agriculture and horticulture are quarantining cotton seed from Texas for fear of introduction of boll weevil.

Storage warehouses near Bahia, Brazil, have installed colonies of bats which keep down the pest of boll worms, cut worms and night flying moths.

There is a vast amount of soft corn in the Middle West, and the food administration is endeavoring to solve the problem of bringing this low grade corn and high grade feeder cattle together.

Notwithstanding the great production of wheat and corn in 1917, the production of the two years of 1916 and 1917 is practically a half billion bushels short of the aggregate of the two preceding years.

There are now 130 agricultural experiment stations throughout China's provinces. There are also two cotton experiment stations, one stockraising station, and a department of forestry with a forest commissioner in each province.

Texas and New Mexico and a small portion of southern Arizona will greatly increase their supply of stock feed by using mesquite beans. Some housekeepers are also grinding beans into flour which makes a most nourishing bread.

Owners of high grade photographic lenses are requested to loan or sell their lenses to the government for use during the war. Factories are unable to supply the immediate need. Write Photographic Division, Signal Corps, U. S. A., Washington, D. C.

A committee of bean growers of California recently held a conference with Food Administrator Merritt and fixed upon a price of eight cents for Pinks and 11 cents for Whites. It is estimated that the average cost of producing beans is not far from \$40 per acre.

## Where Disease Shows First

Just watch the milk yield for the first sign of weakening in the cow's system. If your cow is not giving the quantity or quality of milk you expect, it is time to give her medical attention.

For twenty-five years thousands of the most progressive dairymen have used Kow-Kure as their "first aid" when a cow shows signs of "falling off" or coming down with disease. Particularly before and after the calving period, the use of Kow-Kure is valuable. It is a sure preventive of Milk Fever and Retained Afterbirth, and will enable the organs to resist the diseases which frequently originate at this time.

Kow-Kure has a positive action on the genital and digestive organs, toning them up, making them perform properly and helping the system to function as nature intended. Kow-Kure has proven a prompt remedy for Abortion, Barrenness, Scouring, Lost Appetite, Bunches and other common ills.

A small investment will prove the worth of Kow-Kure in your dairy. Put it to a severe test: try it on your poorest milker and watch results. Druggists and feed dealers sell it; 55c and \$1.10 packages.

DAIRY ASSOCIATION CO.,  
Lyndonville, Vt.

When writing advertisers, mention The Cultivator.

## Who's Who

With the issue of August 11 the Cultivator started its series of "Who's Who" articles to bring before its readers some of the livestock producers of California who are responsible for the large development of the industry. Where did they come from and how long have they been engaged in California development, also how do they look, so pencil and camera are to be used, and some homely, everyday photographs and notes regarding them will bring us closer together. Bear in mind we say "homely photographs" and not photographs of homely people. The idea we wish to convey is that so far as possible we will secure photographs in everyday surroundings at the homes of the livestock producers.

Written for California Cultivator By M. C. Holman

### A VISIT TO THE CARRUTHERS FARMS

**W**E could not possibly have enjoyed a day among live stock with keener appreciation of quality and fitness than the day recently spent with W. M. Carruthers, at his extensive ranch near Mayfield. Some great prize winners are being developed in both Berkshires and Shorthorns. The Berkshire herd of 18 brood sows would be hard to duplicate anywhere, and the young boar, Mayfield Champion 2nd, is probably the greatest boar ever produc-

W. M. Carruthers

ed on the farms. In all probability he will be seen on the fair circuit in coming years. We feel that he is superior to the selection made by Dean Curtiss to head his herd at Ames, Iowa.

Also traveling the fair circuit will be seen two grand show sows which are considered by Mr. Carruthers to be nearly equal to Rookwood Lady

100, the sow that was sold last August to Mr. Frank Brush of Santa Rosa. She was later made grand champion at the National Swine Show at Omaha, an honor which means the pinnacle of perfection.

More champions are coming from the East. In a few weeks will arrive 15 daughters of Rival's Champion's Best, the greatest living Berkshire sire.

At the 1917 California state fair the grand champion sow and the reserve grand champion sow were both products of these farms, and at the Western Berkshire Congress, held in Salem, Oregon, recently, three of the championships and one grand championship were won by hogs sold at the last Carruthers Farms sale. The premier exhibitor's banner at the Panama-Pacific International Exposition was won by hogs that came originally from the Carruthers Farms. It is evident that this herd has been the progenitors of more prize winners than any other herd in the state during the past three years.

Mr. Carruthers is the originator of the private sale in this state, and for the past two years his sales have made the highest averages of any Berkshire sales held in America. Dean Curtiss, the noted Berkshire authority at the last annual sale announced to the assembled buyers that the offering which Mr. Carruthers was putting up for sale had never before been equalled in the United States.

It is a real pleasure to see such great development going on and such wonderful specimens of the Berkshire breed being turned out to win the prizes that are offered for classy porkers.

## Field Notes from the Live Stock Men

Billings, Montana is planning for Midland Empire Fair and Stock Show for 1918. It is proposed to equip for 500 head of stock.

Artillery horses are now demanded of a lighter weight than earlier in the war. The heaviest type of a drafter is considered not so hardy under severe war conditions.

Drouth stricken Texas has thousands of head of live stock starving. The railroads and government forces are uniting in moving the stock as rapidly as possible.

Lancaster County, Pennsylvania, farm bureau and Pennsylvania state college are uniting in a farm steer feeding demonstration. Others in that state are urging more liberal feeding of cotton seed meal.

Registrations of the American Jersey Cattle Club show an increase of 44 per cent, while the increase in the transfers of ownership is nine per cent; authenticated milk and butter-fat tests, five and one-half per cent.

Peters, Lamson & Walker report the sale of four registered Duroc-Jersey gilts and one boar to the Southern Sierras Power Company for their big ranch. This company will go in for high class registered Durocs and Shorthorns.

Wm. Bernstein, one of Kings County's Poland-China breeders, writes that the demand for thoroughly good Poland-Chinas was never greater than at the present moment. We know that Kings County turns out some remarkably fine stuff.

All America, in the live stock line, has its eyes on the International which is the center of attraction for this week. War demands and the large earnings of the live stock men have added to the wonderful interest usually shown in this great exposition.

Live stock breeders of Nebraska recently met at university farm at Lincoln and talked and observed the 500

hogs in feeding tests. The university is also making a test with 50 steers. In connection with the farmers week was an exhibition of pure bred live stock.

Notwithstanding the war interest, the National Horse Show was pulled off at Madison Square Garden during the middle of November with over 1600 entries. The function was conducted this year in behalf of the Red Cross fund. Gross receipts are not far from \$100,000.

For Fontana Land Company: seven bred sows and gilts to W. Moore; for J. S. Prendergast, one bred sow, W. Moore; for Peters, Lamson & Walker, one boar to A. C. Whidden; for W. M. Taylor, one boar to A. C. Whidden; H. S. White of Chino and Falfadale Farms was obliged to refuse association orders as their boars have all been sold.

The International Sheep and Wool Bureau of Chicago is the newest organization along live stock lines. One of its activities is shown in that it has recently transferred several hundred range ewes to the corn belt section of the Middle West. They are also working for recognition by the bankers of live stock men's needs and where a farmer has one sheep he is given another pure bred and a mortgage taken on the two.

Rancho Rubio, owned by Elmer Lamb, Ceres, reports the following recent sales: C. J. Boyd, bred gilt, Modesto; J. N. Chenoweth, bred gilt, Visalia; J. D. Bradshaw, bred gilt, Hughson; C. M. James, four bred gilts, Escondido; Walter McGarvey, two open gilts, Hughson; J. S. Cowan, boar, Hendersonville, Tennessee; George L. Dickson, boar, Ceres; Fred W. Dickson, seven bred gilts, Hawaiian Islands; Dr. L. J. Belknap, two gilts and one boar, San Jose.

The Southern California Duroc-Jersey Association reports that it furnishes any prospective buyer with an

**DUROC JERSEYS**

Sows, gilts and a few boars of the best breeding FOR SALE

H. P. Slocum & Son R 1 Willows, Cal.

uninterested expert hog man to select Durocs from any of the many herds of Durocs in Southern California. This service is free to the buyer. Sales last week through the secretary's office are as follows:

"With the object of determining the effect of the 'Meatless Day' on the demand for marketable beef cattle, the California Cattlemen's Association has been requested to furnish the food administration for California with the most reliable figures that can possibly be obtained at short notice, of the number of fat cattle now ready, and the approximate price at which they are held. All cattlemen are requested to address the California Cattlemen's Association at its office, 320 Sharon Building, San Francisco, and furnish complete data as to the exact number of really fat cattle they have available and in prospect, price placed on same and shipping point, in order that the officers of the association may be in a position to make proper representation to Mr. Ralph Merritt, the food controller, on the subject and secure such relief as the situation warrants."

**REPORT OF DAIRY COMPETITION**

Prof. F. W. Woll, in charge of the State Dairy Cow Competition sends the following report of October performance of the herds competing for the Cultivator's three \$100 prizes.

**HORSES' SHOULDERS AND BACKS**

Too much care cannot be exercised in seeing that the collar is a perfect fit. A collar which is too large is quite as likely to injure the horse as one that is too small. The collar should be scraped each morning and carefully cleaned before it is again put on the horse. It is well to oil the harness, if this has not already been done, and have it soft and pliable. For the first few days of hard work on soft ground, the shoulders of the horse should be bathed in cold water every night after the harness is removed. The horse will be very sore and tired for a few days and should be given every kind of attention. Watch the hames to see that the draft is at right angles with the shoulders. If it is too low, the collar will be constantly "kicking up" at the top and the horse will soon have a sore neck. If the draft is too high, the collar will not rest securely on the lower part of the shoulders where the horse is best prepared to throw his weight. If there are any calloused lumps on the horse's shoulders or back, they should have been carefully removed during the winter when his services were not much needed. If the collar is put on over one of those "sit fasts," it will have the same result as a man trying to walk with a button in his shoe or a bunion on his foot.—Farm, Stock and Home.

**MARKETING COTTAGE CHEESE**

The utilization of skimmilk by making it into cottage cheese and using the cheese as a substitute for meat has been urged jointly by the United States food administration and the department of agriculture. Ordinary pasteboard oyster pails make serviceable containers for marketing cottage cheese locally in small retail quantities.

**MORE HORSES PER MAN**

In view of the probable shortage of farm labor next spring, now is a timely occasion to rig up several three and four-horse eveners to be used on the farm implements. One man with a four-horse team will do almost as much work in preparing the spring seed bed as two men, each using a two-horse team.

Without more meat and fat from America than the Allies have received in the past three years, they cannot remain in fighting trim.

**Elliott-Brant Rancho Guernseys  
Are Persistent Producers**

The results of our first two years of official testing show our herd to average 10,172.28 Pounds of Milk and 507.97 Pounds of Fat. One half of these cows were heifers with first calf who averaged 8,670.24 Pounds of Milk and 436.01 Pounds of Fat (only seven pounds under the average of all A. R. records). Our mature cows averaged 12,710.5 Pounds of Milk and 621.52 Pounds of Fat (120 pounds over the average of the mature cows of the breed).

A bull from these cows will increase the production of almost any herd.

## California Cattlemen's Association

By David J. Stollery

THE purposes of this association, as in part prescribed by its articles, are:

To procure the enactment of legislation beneficial to the cattle industry.

To prevent the theft of cattle, to aid in prosecution therefor; and to offer rewards for the apprehension of criminals.

To procure the best possible market for cattle products, and to this end to prevent combinations or monopolies.

To act as a bureau for the collection and distribution of information concerning prices, sales, shipments, supply and demand of cattle, and other matters of interest.

To enlarge the market for cattle products.

To promulgate sound and correct principles of breeding, fitting and marketing cattle.

To make beneficial traffic agreements.

To generally do such things as may at any time be suggested in the interests of the cattle industry.

### To Increase Production

Representations have been made to the association by Ralph Merritt, federal food controller for California that it is the urgent demand of Mr. Hoover and the administration that the supply of live stock throughout the United States be increased to offset the present European shortage, estimated by them to be at least 40,000,000 head. To further their purpose in California a commission of three has been appointed under the United States food administration of California, of which the president of this association is a member, the other members being Gordon H. True, professor of animal husbandry of the University of California, and the president of the California Swine Breeders' Association.

The board of directors of this association, while they have pledged their active support in carrying out the above objects will seek to secure for the cattle industry of the state such consideration as is consistent with prevailing conditions, and that the rules and regulations to be issued by the food administration shall be so framed as not to militate against the attainments of the objects the federal food commissioner has in view. Remedies for any disabilities resulting from any such rules and regulations will be suggested through its president as they may be observed from time to time, and will, we feel sure receive the serious consideration of the food commissioner.

Under the above conditions we can count upon the cattlemen of the state to do everything in their power to forward the interests of the United States and its Allies in bringing the war to a successful conclusion.

### Hide and Brand Law

The cattle protection board, appointed by the governor under the authority of the last legislature, counts upon the assistance of the association in carrying out the measure known as the "Hide and Brand Inspection Bill."

The hearty support of this association, should, we feel, be given in enforcing the provisions of this bill. Meanwhile we must observe its effects upon the cattle industry in order that the effort of the Association may hereafter be directed in curing any defects that may appear.

### Improve the Market

This association realizes the necessity for improved marketing conditions for California live stock, both for the larger cattle raisers as well as for the producer of smaller quantities of beef cattle.

Our affiliation with the American National Live Stock Association and the participation in its councils by several of our directors insures the earnest consideration of the necessities of the larger class throughout the United States, and the association will interest itself actively in local marketing conditions wherever necessary, so as to better them wherever possible.

### Stockyards

Efforts that are now being made by the state market director in consulta-

tion with our board, with the active cooperation of the farm bureau of the state of California, will, we hope, lead in the near future to the establishment of local marketing facilities under state supervision, as well as the creation of state regulated stockyards in most of our principal cities, both of which will enjoy the cooperation of the cattlemen themselves. This should insure better prices for "less than carload" members and eliminate several commissions.

### Packers Being Investigated

At the solicitation of the American National Live Stock Association a large sum was voted by the last congress to enable the federal trade commission to thoroughly investigate the meat packing industry in the United States. Francis J. Heney of California has been retained by the federal authorities, and the interests of the live stock men are being represented by W. Fisher. Expert accountants are working on the books of the packers, and there is no doubt that as a result of the investigation stabilized prices for live stock will be established, greatly to the benefit of the cattlemen who have hitherto been seriously handicapped by the fluctuations in prices, which it is suggested have been controlled by the packing interests. The support of the association should be given to the efforts of the American National Live Stock Association to better our conditions in this regard.

### Grazing

The hearty cooperation of the forest service has been promised in increasing grazing facilities and conditions. It only remains for the association to make known its wants in this particular, to insure favorable consideration under liberal regulations.

The act of December 29, 1916, affords an opportunity to stock raisers to take up 640 acres of "stock raising lands" on any part of the unreserved public lands vested in the federal government.

The foregoing does not pretend to cover all the activities possible by the association, and other problems will be dealt with as they arise. Suggestions on the part of any members tending toward the welfare of the industry at large will be welcomed at any time.

We trust that our campaign will be so successful that we can make assured the appointment of local boards in each county, who can give attention to local needs, and, acting in concert with the board of directors of the association, work to the mutual benefit of all. Interested stock men may write the secretary, David J. Stollery, 320 Sharon Building, San Francisco.

## Veterinary

Answers in this column by Dr. Wm. Petrie, 2714 South Harvard Blvd., Los Angeles, are without charge. For immediate mail answer remit \$1.00. In writing questions give full symptoms or particulars of injury of animal.

### Founder

I have a horse about 14 years old that is very nervous. When I purchased him a year ago he showed considerable stiffness in the fetlocks and has been growing worse ever since. Now when he is lying down he stretches out his limbs and groans a great deal, but when he gets up he shows his real weakness. At first he can hardly stand. He draws his hind legs under him, putting his whole weight on the hind feet, and nearly drops over back. When he moves he is very stiff and appears to have considerable pain. Of course we can not work him. Is it kidney trouble or what is wrong and what would you advise doing with him?—Subscriber, Etiwanda.

The trouble is all in the front feet. It is inflammation of the lamina of the feet, probably caused by acute indigestion. Remove the shoes and pare the feet thin on the bottom. Let him go barefooted for a long time. Get a pound of saltpetre, mash it fine and give him a small tablespoon of it

in the feed twice a day. Also blister the skin around the tops of the front feet but not in the hollows at the heels. Have your druggist prepare a blistering ointment made of two drams of biniodide of mercury, four drams of cantharides and five ounces of lard. Mix well. Rub it in well with the fingers and tie the horse so he can not reach it with his nose for

Every ball of the YUBA TREAD kept at work at food production helps as much as a hundred balls flung into German trenches.

24 hours. Then grease the parts with lard and turn him loose. Repeat the blister every two weeks until four or five blisters have been applied. All this will hasten the growth of the hoofs and relieve the inflammation. He should soon be able to do your work on the farm but such horses are seldom good on the road again.

#### Horse Rubbing His Tail

Lately one of my horses backs up to a post and rubs his tail. What is the trouble and what can be done for it?—Subscriber, Etiwanda.

The trouble may be due to a mite in the skin or to worms in the rectum. Scrub out the skin well with soap and warm water and then wet the skin with a solution of permanganate of potash, one dram to half a gallon of water. If this does not relieve him then steep about four ounces of tobacco in two gallons of water and when cool strain and inject it into the rectum. Repeat this once a week for two or three weeks.

#### Fungus Growth on Horse's Feet

I have a ten year old gelding that has a growth on each front foot at the back end of the frog which extends two or three inches farther back than where the frog should end. It makes the horse quite lame when walking on plowed ground. I have cut them off and am sending you a sample of the growth. It was quite painful to him when cutting them off and bled quite freely. Treated it with potash permanganate solution and with powdered alum. There is less lameness now but the parts where the growths were removed are quite sore. The horse was cut on both feet just where the growths appear on barb wire some

time ago. I fear the growths may return. What can I do to prevent it?—Subscriber, Olay.

The fungus growths on the horse's feet are such as often follow barb wire cuts. It is caused by the wire dragging the ends of the nerves out and leaving them exposed. Nature in trying to cover them up sends out the growth of fungus tissue. You did right in cutting them off. You should have cut them very close, even below the natural surface and then you should have seared the parts with a red hot iron. Then you should have put about a full teaspoon of Monsel's iron powder on the parts and covered it with surgeon's cotton and then covered this with a bandage wrapped several times around the foot. This might be left on for a week or longer. After that it would be easy to heal the wound by dusting on a little dry lime or burnt alum. It is not too late to follow this treatment now.

#### Caked Udder Before Calving

If a cow's udder becomes hard before she has calf should she be milked? Is it absolutely necessary that a calf should have the first milk? What is the best treatment for caked udder?—Subscriber, El Cajon.

By all means milk her out twice a day. It will make little or no difference with the calf whether it gets the first milk or not. Also give the cow one pound of epsom salts and half a pound of common salt dissolved in three pints of hot water. When cool give it all at one dose as a drench. It would be good to give every cow a dose like this two or three days before calving. It cools out the system and is a good preventive for milk fever.

## A Great Sale of Quality Holsteins

The Long-Heralded Guaranty Sale at Sacramento  
a Proof of the General Recognition of the  
Worth of Holsteins

**S**OLD to W. J. Higdon for \$6500." The time, Wednesday, December 5; the place, the great Guaranty Holstein sale of the California Breeders' Sales and Pedigree Co. at Sacramento; the bull a descendant of King of Pontiacs, with 228 A. R. O. daughters, on one side, and on the other from Prince Gelsche Walker, the famous bull which A. W. Morris & Son sold to Santa Anita Rancho for \$12,500. This young animal which Higdon bought is the son of King Korndyke Pontiac, now the chief sire in the herd of Fred W. Kiesel of Sacramento. Miss Valley Meade De Kol Walker, with a record of 36.81 pounds of butter in seven days as a three-year-old, is the dam. She is from the Morris herd. This bull is King Korndyke Pontiac 20th.

The top notcher of the females was Korndyke Sadie Vale Rena, the famous McAlister heifer. Fred W. Kiesel took her away after bidding her up to \$2300, and then announced that he came prepared to take her if it required \$5000.

Sales Manager Hughes reported that the average of \$957.37 made at this sale gives it the record of third highest in the United States and of course such average makes it supreme among sales west of the Rocky Mountains. No such sale was ever held anywhere when quality of stock is considered. A Wisconsin auctioneer said he had never seen a sale before in which six 30 pound cows had been offered at auction.

Averages secured by individual consignors have been calculated as follows: Santa Anita Rancho, eight head averaged \$1388; McAlister & Sons, Chino, 11 head averaged \$1328.50; Alexander Whaley of Tulare, three head averaged \$1067; A. W. Morris & Sons of Woodland 15 head averaged \$951; Palo Alto Stock Farm, Palo Alto, eight head averaged \$950; Bridgford Company of Knightsen, ten head averaged \$921.50; Gotshall and Magruder, three head averaged \$812; Fred W. Kiesel of Sacramento, three head averaged \$892. R. F. Guerin of Visalia, two head averaged \$665. W. J. Higdon of Tulare, three head averaged \$652; Toyon Farm Association, one animal, \$1000; J. S. Gibson Estate

Company, Williams, one animal, \$430; Dr. E. J. Weldon, Sacramento, four head averaged \$421.

The auctioneers were Col. Ben Rhoades and Col. J. E. Mack of Wisconsin. The manager was C. L. Hughes and other bidders were R. S. Guerin and a big bunch of thoroughbred believers in pure bred stock.

Some other of the big sales were: Stanislaus Abbecker Maid, by Stalder Bros. to Fred Kiesel, \$1375; the cow, Rag Apple Alcartra, was sold by Bridgford Company of Knightsen to Alex Whaley for \$1175.50; the cow, Fairmount Echo Alcartra, from Bridgford Company to Otto McClure of Santa Ana and J. W. Benoit of Modesto for \$1225.

The heifer, Lady Sadie Vale Joe Karlay, was sold by Gotshall & Magruder of Ripon to John Benoit of Modesto for \$1400; the cow, Miss Luit Aralia Burke, was sold by Morris to A. M. Bibbens and H. E. Cornwell of Modesto for \$1450; the cows, Princess Hartog Walker and Miss Filled Korndyke Walker were sold by Morris to E. D. Barry, Jr., of Daggett for \$1400 each; the heifer, Natoma Verna Korndyke, was sold by Kiesel to the Morris for \$1300; the bull, Finderne Soldene Pontiac Valdesa was sold by Palo Alto Stock Farm to George A. Smith of Corcoran for \$1150; the cow, Anokkia Diotime Korndyke, was sold by Santa Anita Rancho to Bibbins & Cornwell of Modesto for \$1350.

The Red Cross bull, offered for sale by Mrs. Anita Baldwin, the entire proceeds to go to the Red Cross of the county of the purchaser, was purchased by Guion R. Gibson of Williams and I. G. Zumwalt of Colusa.

It was a great sale, and Manager Hughes and all members of the California Breeders' Sales and Pedigree Company have occasion to feel pride at its success.

## Insure Hogs

**V**ACCINATION is cheap insurance against hog cholera in view of the present high prices of pork, according to Dr. C. W. Hobbs, field veterinarian and director of the serum laboratory of the Kansas state agricultural college.

The exact health condition of the hogs or pigs should be ascertained before treatment. The herd should be penned in a clean and disinfected enclosure the day before they are treated. This allows them to become reconciled to the new surroundings. One may then take temperatures and come to some definite conclusions as to the condition and health of the pigs.

### Ascertain Hog's Condition

Swine that are penned and prepared for immediate treatment will show abnormal temperature and thus render it impossible for the veterinarian

it outside the pen where the pigs are kept. Nail a strip across the trough three feet from the top. Place the pig on his back in the trough with his face under the strip. An assistant should hold his hind legs.

The side of injection should be thoroughly cleaned with a cresol solution and then dried. The serum should then be injected in the arm pit or axillary space, dividing the dosage in each side. The virus should be injected in the inside of the thigh.

### Feed Is Not Needed

Feed should be withheld a day or two previous to vaccination and from six to eight days after. Plenty of exercise and green pasture are all the pigs need after vaccination.

It is advisable at all times to employ a qualified veterinarian to vaccinate swine. He will be able to give the exact condition and will under-

As They Raise Hogs In Some States

As They Raise Hogs In California—Usually

Hog comfort is just as profitable as human comfort. Without discussing the wallow question, we may, at least, filthy corrals. They cost a lot of money. Clean cement also costs—it also makes more money.

to give an accurate statement as to their exact condition.

The operator should be required to take the temperature of each individual before administering the serum or virus, and if any of the animals show an abnormal temperature, they should be given only the serum and be isolated for investigation. All those showing normal temperatures may be given the simultaneous treatment. Those that are isolated may be given the serum and virus after they regain normal condition.

### When to Give Treatment

The best age for treating pigs is from 10 to 15 days after weaning. Give one cubic centimeter of serum per pound weight of the pig up to 35 pounds and after that one-half cubic centimeter per pound weight. Half a cubic centimeter of virus per pig is sufficient. Should there be any infection on the farm, pigs may without danger of infection be treated about 10 days before being weaned, as nursing pigs rarely contract cholera. The milk from the mother, if she is immune, protects the pigs. Pigs must not receive the serum and virus treatment before being weaned unless their mothers are immune.

Many breeders are following the plan of vaccinating pigs before they are weaned, as then there is no danger of losing them and the expense is lessened considerably.

### To Administer Serum

A convenient method of administering the serum to pigs of from 35 to 100 pounds is to take a V-shaped trough eight to ten feet long and place

stand the dosage. If one is not available, however, it is easy for a person to learn to administer the virus and serum accurately. Anyone can administer serum but a permit must be secured from the live stock sanitary commissioner before one is allowed to use virus.

### WASTE IN HOLDING HOGS FOR FUTURE SHIPMENTS

A loss of five weight of hogs and waste of feed result from the practice of purchasing local hogs in small lots and holding them in local stockyards until a carload shipment is collected, according to specialists of the United States bureau of markets. They point out that at this and other seasons when runs are light it often takes local buyers four or five days to assemble enough small lots for a carload. As facilities for feed and watering are inferior in small yards the hogs make no further gains on their feed and often suffer actual loss in live weight. Local buyers, therefore, would do well to specify a certain day for the delivery of lots from the various farms and load and ship without holding. Farmers also could club together to make up cooperative carload shipments on regular week days, thus saving the margin lost in individual small lot selling.

Modern warfare consists of united, coordinated effort on the part of entire nations. If the present war teaches Americans to cooperate it will not have been entirely wasteful.

Tractors are the busy Berthas of agriculture.

## Races of Bees

Written for California Cultivator By Ralph de Ong

**T**HERE are but few races of bees common in California. Of these the Italian are the most popular on account of their great freedom from brood diseases. This point is especially valuable for the beginner and the small beekeeper, for foul brood is the rock upon which scores of ventures have been wrecked.

### Italian

There are variations in the type of the Italian, principally in the markings of the abdomen, the general appearance being a light colored bee with the abdomen largely yellow, either a solid yellow color or more or less striped. They are very prolific, which accounts in some measure for their resistance to diseases, for even though a considerable percentage of the young is lost by foul brood there will nearly always be sufficient brood matured to maintain the strength of the hive. The Italian bees are gentle, build few queen cells, swarm less than Carniolans, are good workers, keep their hives sanitary, but cap their honey rather dark, which detracts from the appearance of comb honey. Some beekeepers report considerable trouble from their tendency to rob neighboring hives.

### Carniolan

These are a dark grayish-black bee, quite common in California. They are one of the largest honey bees, gentle, good workers, much inclined to build extra queen cells and to swarm often. The honey is capped white. These bees are apparently not as resistant to foul brood as are the Italians and hence are losing favor.

### German or Black Bees

A dark colored bee, rather small, difficult to handle even by the use of smoke, less prolific than the two former races, have a dirty hive, build a large number of queen cells and are very susceptible to brood diseases. The honey is capped white.

The Italian bee has been carefully bred in this country, longer than any other race, which will account in part for its high development. There are several reliable breeders of queen bees in this state from whom pure stock can be purchased and in this way gradually Italianize the apiary. A fertilized queen, alone, is all that is necessary to change the race in an established apiary for if she has been bred true, her offspring, both drones and workers, will be Italians.

## Write for It

**T**HE Committee on Public Information, Washington, D. C., which consists of the Secretary of the Navy, Secretary of War and George Creel, has been most active in sending out a series of pamphlets and reports upon our nation, its making ready for war, the reason for the war, and other points invaluable at this time. The American people are doing a lot of fighting with their heads, and this series of books should be in the hands of the people. Most of the reports are free for the asking. "National Service Hand Book," and "Battle Line of Democracy, Prose and Poetry of the Great War," are each sold at 15 cents. The latest to be added to the series is Number five, "Conquest and Culture, Aims of the Germans in Their Own Words." It is a 171 page book with map showing "Why Germany Wants Peace Now and The Pangerman Plan as realized by War in Europe and Asia." From this latter we quote extracts from utterances of Kaiser Wilhelm and other public men of Germany:

"The German empire has become a world empire. Everywhere in distant quarters of the earth, thousands of our countrymen are living. German guardians of the sea, German science, German industry, are going across the sea. The value of what Germany has upon the sea amounts to thousands of millions. It is your earnest duty gentlemen, to help bind this greater German Empire firmly to our ancestral home. \* \* \* It is my wish that, standing in closest union, you help me to do my duty not only to my countrymen in a narrower sense, but also to the many thousands of countrymen in foreign lands. This means that I may be able to protect them if I must." This is from a speech of the kaiser, June 16, 1896. It is one of his most pointed and significant utterances. The protection of German citizens of South America could only mean interference in the affairs of South American nations, and if they refused such interference it was likely to mean such ultimatums as Austria sent Serbia. Such a statement was a threat against the Monroe doctrine and was likely to involve the United States.

Also touching upon the United States of America, von Edelsheim, an officer of the general staff, in 1901 wrote in "Operations Upon the Sea," translated in 1914: "If the German invading force were equipped and ready for transporting the moment the battle fleet is dispatched under average conditions, these corps can begin operations on American soil within at least four weeks. \* \* \* The United States at this time (1901) is not in position to oppose our troops with an army of equal rank. \* \* \*

"The fact that one or two of her prov-

inces are occupied by invaders would not alone move the Americans to sue for peace. To accomplish this end the invaders would have to inflict real material damage by injuring the whole country through the successful seizure of many of the Atlantic seaports in which the threads of the entire wealth of the nation meet. It should be so managed that a line of land operations would be in close juncture with the fleet, through which we would be in a position to seize in a short time many of these important and rich cities, to interrupt their means of supply, disorganize all governmental affairs, assume control of all useful buildings, confiscate all war and transport supplies, and lastly, to impose heavy indemnities. \* \* \*

"As a matter of fact, Germany is the only great power which is in a position to conquer the United States."

### SUMMER SESSION IN LOS ANGELES

Many papers of the state have made announcement that the next summer session of the University of California would be held in Los Angeles high school. There will be certain sessions in Berkeley as heretofore, but we understand the main summer school will be in the south. The papers have not however, given the information as to the work to be taken up by the college of agriculture in this school. We have from Prof. J. Eliot Coit information that the college of agriculture will have important work in this summer school which will extend from June 24 until August. Of course the Cultivator will give more explicit information as to the program to be followed in due time, but it is well that our readers should know that the division of citriculture of the state university will have entire charge of the horticultural work of this school. There will be courses on citrus fruits, and others on semitropical fruits, agronomy and animal husbandry, and they will be along most practical lines. One special course will be given to the poultry industry. The agricultural work will be in charge of Professors Coit, Condit and Hodgson.

If you have not begun to inquire into the fitness of tractors for your farm you will be surprised to find how the inventive genius for which America is famous has conquered the obstacles which you have thought stood in the way of your owning and using a tractor. And if you have not investigated the advantages of farming with power you will be surprised at the benefits it will bring you.

Farm boys should lay in plenty of nuts and popcorn. It's going to be patriotic to eat it instead of candy this winter.

# Farm for Profit

## and Help U. S. Win the War

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

## MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent, produce to the limit. Fertilize your land—the increase in yield and price of crops will more than pay all the fertilizer expense—it will enable you to farm with profit. Don't spend your time working worn out land. Make it pay—Fertilize with Hauser's Organic Fertilizer.

### HOGS

**Registered Durocs**—We offer for sale a choice service boar out of a daughter of Modesto King and by a grandson of Burk's Good E Nuff; young sows and boars out of Model Queen of U. F. and by a son of Golden Wonder; young sows and boars out of a granddaughter of John Orion and sired by a son of Model Col.; three young boars out of a great sow of Crimmon Wonder breeding and sired by a son of King's Col. Every one cholera immune by the simultaneous method. Registered, crated free of charge. If you cannot visit us write for prices. **Derryfield Farm, I. O. O. F. Building, Sacramento, Cal.**

**The Billiken Brand of Chester Whites**—Entirely sold out of bred sows and gilts. Have a few open gilts of March and April farrows; also 6 boars, same age. Have 9 young tested sows to offer for late December shipments. These have each farrowed once and will be bred for a late March or early April farrow. Fall pigs, both sexes, now being weaned and will be ready for delivery during December. Good breeding stock is getting very scarce and rapidly increasing in value. If you want some of this easy feeding, melon type, get busy with your orders. **C. B. Cunningham, Mills, Cal.**

**Grape-Wild Farm Berkshires**—World's Fair Grand Champion Grand Leader 2nd heads our herd, not only himself a champion but the sire of champions. At the 1916 California state fair his daughters won all of the senior sow classes including the grand champion sow. At the 1916 Oregon state fair a Grand Leader sow was junior champion. We are offering a number of choice boars of exceptional breeding and are also booking orders for fall pigs. **A. B. Humphrey, Escalon, San Joaquin Co., Cal.**

**20 of the Finest Boars Ever Sold to improve the herds of pork producers.** High price of pork assured because of the scarcity of breeding stock. Improve your herd with a good Poland-China boar. I have them from six to eighteen months old, priced from \$40 to \$100. Saving all sows for Kings County Poland-China Breeders' Sale, February 20. **Bernstein's Ranch, Hanford, Cal.** Hogs shipped on approval.

**Bargain**—Choice young Duroc-Jersey registered boar, 8 months old, son of First Choice and Advancer of Napa, \$30 if taken immediately; also a few weanlings at \$10 each. Apply **San Diego Land Corporation, 401 Southern Title Bldg., San Diego, Cal.**

**Superba, World's Grand Champion Poland-China boar and one of the greatest sires of the breed.** Spring boars ready for service, also few sows bred to this noted sire, reasonably cheap. **Rough's Greenfields, Arlington Sta., Riverside, Cal.**

**Berkshires**—First prize junior boar; first and second senior boar pigs including junior champion; fifteen spring and fall open gilts sired by Ames Rival 115, champion boar; and two junior yearling bred sows priced cheap for immediate sale. **F. D. Hall, Ferris, Cal.**

**We Pay Cash for Hogs of All Sizes,** weights and breeds. Any number from one to several thousand considered. What have you? **Durbin and Forbes, 722 San Fernando Building, Broadway 4170, Los Angeles.**

**For Sale**—Thoroughbred Poland-China weanlings, and gilts, also 18-months old boar, winner first prize **Riverside County Fair, Primma Vista Gardens, R. R. 4, Arlington Sta., Riverside, Cal.**

**PLW. Duroc-Jerseys,** the most consistent winners wherever shown. **Peters, Lamson & Walker, Devore, San Bernardino County, Cal.**

**Big Type Durocs**—Well grown out February and March pigs of either sex in any quantity. We ship only the tops and butcher the culls. **F. M. Johnson, Napa, Cal.**

**Most Money in Duroc-Jerseys**—Bred sows and weanlings, either sex all the time. **Delta Farm and Live Stock Co., Colton, Cal.**

**Large Yorkshires**—The ideal hog for the progressive farmer. Service boars and fall pigs, both sexes, for sale. **A. L. Tubbs Co., Callatoga, Cal.**

**Large Type Poland-Chinas** are prolific and profitable. Can furnish boars any age at reasonable price. **J. A. Crawshaw, Hanford, Cal.**

**Rancho Rubio Durocs** all sold out except some choice fall boar pigs. Write for prices. **Elmer Lamb, Ceres, Cal.**

**Greenwood Farm Durocs**—"Size with Quality." **H. C. Witherow, Palo Cedro, Shasta County, Cal.**

**Berkshires**—Sired by Star Leader, the \$1,500 boar, ready for service. **Kounias Registered Stock Farms, Modesto.**

**Durocs**—P. & L's Defender by Defender heads herd. **Joseph Prendergast, Route 2, Box 87A, San Bernardino, Cal.**

**Model Herd Berkshires** bred for size and quality. Weanlings and gilts. **J. L. Gish, Laws, Cal.**

**Carruthers' Farm Berkshire Hogs**—Our herd won Premier Exhibitor prize at the P. P. I. E. Exposition, Mayfield, Cal.

**Poland-Chinas**—A few good breeding boars. **S. F. Williams, Orland, Cal.**

**Oregon, California Government Lands.** Latest Green Booklet Free. Tells "How, Why, Where." Write **Joseph Clark, Sacramento.**

**Free List of Monterey County bargains.** **Bohannon Realty Co., King City, Cal.**

### POULTRY

**White Leghorn Baby Chicks**—We have culled our flock down to 2500 of our best laying hens that average over four pounds each. They have paid a nice profit every month this year. Baby chicks will be scarce this spring for the reason that there were very few male birds kept over. You should place your order early and get the chicks when you want them. **Lyon Hatchery, Gardena, Cal.**

**Order Now,** pure bred White Leghorn chicks, 15c each until March 15th, then 12c. Eggs \$1.00 per 15; \$2.00 per 30; \$6.00 per 100. Big plant, best strains foundation stock, thousands of breeders, 20,000 feet under roof, green feed and fresh cut bone fed daily. Remember, the chick or egg cost is small compared to the feed cost, so get the best. Catalogue free. **Newton Poultry Farm, Dept. 3, Los Gatos, Cal.**

**Baby Chicks**—From my thoroughbred and carefully selected flock of S. C. White Leghorns. Orders booked now for January and February delivery at \$12.00 per 100, \$110.00 per 1000. March delivery \$10.00 per 100, \$95.00 per 1000. Correspondence solicited. **J. R. Heinrich Poultry Yards, Arroyo Grande, Cal.**

**Spring Chicks**—We are booking orders now. S. C. White Leghorns, only selected and fully matured stock that is bred to lay used in the breeding pens, which assures strong and vigorous chicks. \$12 per 100; \$100 per 1000. **H. A. Schlotthauer, Exeter, Cal., Route A.**

**Penn's Quality Barred Plymouth Rocks** are correctly bred. Blood lines that produced the WORLD'S FAIR and other noted winners BOTH in Utility and Exhibition classes. Eggs and breeding stock. Catalogue. **GOLDEN RULE POULTRY FARM, St. Helena, Cal.**

**200-290 Egg Leghorns, Wyandottes, Anconas, Reds, Rocks, Minorcas, Orpingtons.** Chicks, eggs weekly. Booking orders January, April delivery reduced prices. Cockerels that transmit laying qualities; \$3.00-\$10.00 profit per hen last year. **C. Beeson, Pasadena, Cal.**

**Baby Chicks**—We start in January to hatch those sturdy youngsters, like we had last season. We will have lots of them too, but please order early. **White, Brown and Buff Leghorns, R. I. Reds, Barred Rocks, and Black Minorcas.** **Campbell Poultry Ranch, Campbell, Cal.**

**Day Old Chix**—Barred Rocks, Rhode Island Reds, Black Minorcas, Brown Leghorns, Buff and White Orpingtons. Other popular breeds a matter of correspondence. **Enoch Crews, Seabright, Cal.**

**Poultry Wanted**—We pay the highest market price for all the local poultry we can get, no matter how large the quantity; also fresh ranch eggs. We remit immediately. **National Poultry Co., 607 E. Third St., Los Angeles, Cal.**

**Baby Chicks (White Leghorns)** shipped on approval before remitting. No weak ones charged for. **Schellville Hatchery, Schellville, Cal.**

**"Eastman's Bred to Lay"** Barred Plymouth Rocks. Choice Cockerels. **Fairmead Poultry Farm, Fairmead, Cal.**

**Official 200 Egg White Leghorns** in Washington Contest. **Charles Hudson, Escondido, Cal.**

**For Sale**—Pearl Guineas and Golden Seabright Bantams. **E. A. McKinley, Ukiah, Cal.**

**Special Prices**—Silver Campbells, Barron White Leghorns. **J. D. Brubaker, Hemet, Cal.**

Want clean-cut, sober, dependable man, a hard worker and good manager of men. Knowledge of dairy cattle and hogs desirable. Must show successful alfalfa record. Excellent living conditions, fine equipment, good future. Give age, full experience and salary expected or no attention paid. Address North, care of Cultivator

**Wanted**, by established California company, ten men with rigs preferred to solicit and collect in Central, Southern and Northern California, prefer resident agents who can work part or all time, good pay and several weeks work to right parties. Address J. H. Yetter, 115½ North Broadway, Los Angeles.

**Wanted Position as Ranch Superintendent**, development, alfalfa and grain a specialty. Years of experience. Best of references. Address Arnold Taylor, Box 78, Terra Bella, Cal.

**Wanted**—Position as manager of breeding and beef herd by graduate veterinarian who knows how. Address Park, Care Cultivator.

**Wanted**—To hear from owner of farm or unimproved land for sale. O. K. Hawley, Baldwin, Wisconsin.

## TURKEYS

**Mammoth Bronze Turkeys** from my best prize-winning stock. Eggs in season. N. E. Mulick, Willows, Cal.

## LIVE STOCK

**For Sale**—Highly bred Kentucky Jack. Black with white points, five years old this winter. Good height, weight and length. Bought of Ed Bradley, Trenton, Ky. Eligible to registration. He is by Silver Crown No. 2652, by King George No. 3189, by Silver Crown No. 79: first dam, Black Anna No. 3984, second dam, Rox Anes No. 149. J. C. Joplin, Santa Ana, Cal.

**Butte City Shorthorns**, Shropshires, Berkshires and Ponies. Stock of all ages for sale. Can supply one or a carload. Get our prices and descriptions before buying. Butte City Ranch, Box C, Butte City, Glenn Co., Cal.

**Young Bred Milch Goats**, Due Fresh in the spring, \$25 each, also few matured Does. Inclose stamp for reply. M. A. Wood, 632 N. 3rd St., San Jose, Cal.

**Registered Shires**—Blackhawk Stock Ranch. Importers and Breeders. Easton & Ward, Burlingame, Cal.

**For Sale**—Eleven weanling mules. Chas. Hubbard, Riverdale, Cal.

## TURKEYS

**Our Geese and Turkeys Win Again**—Grand Champion Sweepstake Special for best pair of birds in show. For size vigor and quick maturity, our stock are best. East or West. Stock and eggs in season, also Collie pups. Correspondence solicited. John G. Mee, St. Helena, Cal.

**Giant Bronze Turkeys and Eggs**—Choice breeding stock. M. M. Reiman, Planada, Cal.

**For Sale**—Mammoth Bronze turkeys. The Best In The West. Geo. A. Smith & Son, Corcoran, Cal.

## What Next?

Written for California Cultivator By Jean A. Koethen

**T**HE beginning of the season of 1918 is upon us. What are we poultry folks going to do about it? We cannot single handed lower the price of feed or raise the price of eggs, but we can get in touch with all the other poultry keepers on the outside through existing poultry organizations or something better, and we can quietly and steadily on the inside, improve our own flock till we have something we can hold up to the gaze of an admiring world as "the best ever" in some one particular.

Ben Franklin's joke about "hanging separately if we don't hang together" is no joke at all to the poultryman. Everybody else has combined — bakers, grocers, butchers, orange growers, walnut growers. What is to become of the poultryman if he sulks in a corner and refuses to play?

In planning to improve our individual flocks the coming year, we must aim at more eggs, more and better meat, more nearly standard bred stock.

## Better Layers

We need more eggs. It costs anywhere from \$3.00 to \$6.00 a year to feed a laying hen just now. If she lays less than 12 dozen a year her eggs will cost more than they bring. Hens that do not lay must be sold to the butcher or to the neighbors, anything to get rid of them. The very life of the industry depends on getting rid of these unprofitable loafers.

Principles and methods of selecting the best layers in the flock have been given so often in this column that I need not repeat them farther than to say, find the best layers somehow. Trapnest, cull by color of legs and beak in November, or according to lateness of molt or according to the capacity of the hen as shown by the condition of her "lay" bones, or by all together, or if you can do no better, take a month off and sit down in your hen yard and watch to see what hens go to the nest oftenest, which lay at the earliest age, which have the reddest combs and the loudest voices. Find the best one, anyhow. One hen will do to breed from, if only she is a good one. When she has been found mate her to the best cockerel (I should have said the hen must be in her second year) you can find, the son of a high producer, if you can find him, a good crower, alert, not undersized, of fair color and obvious vigor. If he is a fighter, so much the better. Raise a few chicks from such a pair as this and you will have made a start toward improvement in egg production.

## More Meat

But we want meat as well as eggs. Can the same breed be made to produce both? Easily, if it is the right breed. In many of our laying contests Leghorns have come out first, that is, as a class, but in nearly all cases where

the average of Leghorns has been higher than that of any other breed, some single Red or Rock or Wyandotte stood at the head of the list. This does not prove that Rocks or Reds or Wyandottes are better layers than Leghorns, but it certainly does prove that there is no reason why the American breeds, with proper selection and breeding, should not be exactly as good layers as Leghorns.

The dual purpose fowl has this great advantage, that it is a producer not only of eggs but of meat, and meat is what the world stands in the greatest need of. Cockerels need not be rushed to market, as Leghorns are, as soon as they reach broiler size. They are better as fryers and just as good as roasters, and some experts hold that the roaster size is the most profitable. The hens, when they have completed their two years as layers, used to sell for what it cost to raise them. They hardly do this now, but the margin of loss is much less than that involved in the marketing of old Leghorn hens. The eggs of dual purpose hens are larger, as a rule, than those of Leghorns, and pullets of many of these breeds lay a full sized egg from the start. The heavier the hen, the larger egg she lays. My Light Brahma pullets this fall have nearly every one laid an egg that passed as a full sized hen's egg from the start. When these pullets are a year old they will lay extras. It may be that we shall never see Leghorns supplanted by Rocks and Reds and Wyandottes on commercial farms, but I believe we shall see the coming year a decided increase in the popularity of the heavy breeds as farm and back-lot fowls. More of my neighbors in our little suburban town are raising chickens or planning to keep a few than have ever been interested before. And the birds these people keep are invariably heavy hens. They want the meat and the large eggs.

## Breed to Standard

Can a productive flock be a standard bred flock? Why not? Standard bred fowls are not necessarily exhibition birds. They are birds that have been bred with due regard for the standard of perfection as well as for utility qualities. In such a flock birds that are decidedly off color or undersized are discarded. Breeders are selected not only for fecundity, but must pass in color and size and type as well. The best layers are not the largest birds in a flock, but many birds fully up to standard weight are excellent layers. An undersized hen with a big egg record is hardly likely to be as good a breeder as an average sized hen with a slightly lower record. Phenomenal layers for some reason rarely pass on their qualities to their descendants. The hen to be relied on as a breeder is the vigorous, well developed heavy layer, but not the phenomenal layer.

Egg production has been regarded

as the foundation of the poultry industry. In normal times this was probably the case, but now, when war time efficiency is demanded everywhere the hen that produces only eggs is having trouble to show as good a reason for existence as the hen that produces both eggs and meat, and the mongrel has no show at all. Let us make our slogan for 1918 "Meat and eggs; plenty of both, and good looks besides."

## DRAFT CLASSIFICATION

The next draft, or rather the next quota, will be selected on an entirely different basis from that of the first liberty army. All former exemptions are wiped off the slate, and a new classification, as given below, will obtain. To enable those in charge of the call to classify those of draft age a questionnaire is being sent out. The classification is:

Class one will comprise unskilled laborers or those without dependent relatives.

Class two will comprise skilled laborers with only slightly dependent relatives.

Class three will comprise technical experts, county or municipal officers, municipal firemen and policemen, workmen in arsenals, armories, and navy yards, assistant managers of agricultural and industrial enterprises, and those having aged, infirm or invalid dependent relatives.

Class four will comprise the heads of necessary agricultural and industrial enterprises, merchant mariners and those upon whose daily labor wives and children are dependent.

Class five may cause a smile because it includes "officers of states or the United States," clergymen and theological students, together with "persons physically, mentally, or morally unfit." The list also includes all persons in the military or naval service, licensed pilots, aliens and alien enemies.

## LADIES AUXILIARY

At the last meeting of the California Association of Nurserymen, October 10, 11, 12, 13, a ladies auxiliary was organized.

The purpose of this society is to promote sociability among the ladies attending the annual meetings of the California Association of Nurserymen and to encourage a keener interest in the art of horticulture, thereby working for the uplift of the nursery business to which this society is allied.

Secretary Mrs. L. H. Elmer of San Jose is sending invitations to ladies of the households of the members of the Nurserymen's Association to become members of the Auxiliary. This

will doubtless add to the social pleasures and to the profitableness of the nurserymen's meetings.

## PROOF POSITIVE

"I will produce just one undeniable fact which shows woman are more practical than men," says Bum Bunkster. "When a man's hair begins to grow scanty, what does he do? He buys some patent medicine hair grower that was never yet known to produce hair. When a woman finds it necessary to increase her hirsute adornment what does she do? She buys hair?"

Fear is more contagious than most diseases, and more fatal.

## The Best Feed on the Market

Has the highest protein at the lowest price \$2.80 per 90-lb. bag, subject to market changes; see that your hens eat as much Dry Mash as they do grain; feed them lightly of grain in the morning and make them work for it; either have a scratching pen or spade up a part of the ground and rake the feed under; keep "A-1" Dry Mash in a dry form before them all day; about one hour before feeding them their grain in the evening WET their Mash and let them eat all they will; put it on top of the Dry Mash, then feed them all the grain they will eat; this stuffing process will give them a full crop to carry them through the long night of inactivity; analysis is printed on every bag; give it a trial. At your Dealers or

The Globe Mills, Los Angeles

## Bargains Bargains

## Mandy Lee Incubators

We are selling out our line of Mandy Lee Incubators. While they last we will offer the 140 egg Mandy Lee Incubator for \$16.00, F. O. B., Los Angeles. These machines are a snap at this price. Six patented and distinctive features. Absolute satisfaction guaranteed. A few of the other sizes for sale. WRITE FOR CATALOGUE.

Los Angeles, Cal.

## Get under the Shower of Gold

coming to farmers from the rich wheat fields of Western Canada. Where you can buy good farm land at \$15. to \$30. per acre and raise from 20 to 45 bushels of \$2. wheat to the acre it's easy to make money. Canada offers in her provinces of Manitoba, Saskatchewan and Alberta

## 160 Acre Homesteads Free to Settlers

and other land at very low prices. Thousands of farmers from the U.S. or their sons are yearly taking advantage of this great opportunity. Wonderful yields also of Oats, Barley and Flax. Mixed Farming is fully as profitable an industry as grain raising. Good schools, markets convenient, climate excellent. Write for literature and particulars as to reduced railway rates to Sept. Immigration, Ottawa, Canada, or to

## GILBERT ROCHE

3-5 First St., Sheldon Block  
San Francisco, Cal.

Canadian Government Agent.

## Somewhere in America

Laying submarine cable, hundreds of miles of it, to scores of isolated lighthouses is one of the telephone tasks made necessary by the war. The Bell System has also built lines connecting some two hundred coast guard stations.

It has built complete telephone systems for fifteen National Army cantonments and fifteen National Guard camps, each a city in size, and also at many naval, officer's reserve, mobilization and embarkation camps and at army and navy stations.

It has provided an enormous increase in long distance facilities throughout the country, that satisfactory service may be maintained between cantonments, training camps, guard outposts, military supply stations, war industries, the National Capital and other centers of Government activity.

The Government facilities at the National Capital have already been increased three-fold and there has been a tremendous increase in local and toll facilities.

Fifteen thousand miles of telephone wire have been taken from other use for the exclusive service of the Government and some 20,000 miles of telegraph facilities also provided.

Meanwhile the Bell System has given generously of its man power, until over seven thousand men are in service or recruited for military duty.

Members of the Bell System whether they have already gone to France or whether they have stayed at their posts to help mobilize the country for victory, are equally in the service of the Nation.

### CHRISTMAS IN CALIFORNIA Written for California Cultivator By Ida M. Blake

I wish I might send the sunshine,  
Or a bit of the sky's own blue,  
And just a breeze of the mountains  
From California to you.

If you only could see the roses  
Blooming everywhere  
And breathe the perfume of oranges  
In the balmy summer air,

See the golden heart in the poppy,  
Beside the country road,  
And pepper trees so graceful,  
With their crimson berry load.

Best of all the grand old mountains,  
Beautiful indeed to behold,  
And folded within their bosoms, the canyons  
Whose wonders are yet to be told.

Just to think it really is winter,  
And the East is frozen and cold,  
While we are basking in sunshine  
In the land that ne'er grows old.

So I'm sending you Christmas greetings  
With wishes fond and true,  
And hope e'er the New Year is ended  
California may charm you too.

### A REAL CHRISTMAS

**H**ER name was Philippa, a royal name for such a very small, poor English maid, but she had always been called "Flip," and she lived in Duchess row. Duchess row makes you think of something stately; but, alas, here it meant just a row of narrow, grimy houses standing in a dark and dreary street, where the sunshine never seemed to come—a place of poor people in the heart of toiling London. Flip lived at 9 Duchess row with her mother, a widow. They had the topmost room of the house, and of all the poor people in Duchess row I do not think any were quite as poor as Flip's mother, who had to work day and night to earn a scanty living by making buttonholes in coats and waistcoats for a ready made clothes warehouse. It was a hard life for the two, but Flip possessed a brave and stanch little heart beneath her threadbare frock and when she came out of school each afternoon would sit until her eyes were burning and her poor little fingers raw and aching, helping her mother.

And it was so she sat one afternoon a week before Christmas day trying to catch the last gleams of murky daylight which came through the window of their room. It was a bitterly cold, cheerless day, not a typical Christmas with frost and snow, but leaden skies and a biting east wind made all folks shiver and long to be home by a cozy fireside. But fires are a luxury in Duchess row, and there was but scant warmth in the room where Flip and her mother sat, working hard.

"If we can get these finished tonight you can run out with them, an' when you come back we'll 'ave a bit more coal, an' I'll git a bit of fish from round the corner, an' you shall 'ave a nice 'ot supper, deary," said the pale mother with a loving look.

"That'll be just splendid," replied Flip, "an' then we'll set before the fire, an' you'll tell me about them real Christmases you used to 'ave when you were a girl."

"I don't like talking of them days," said the mother with a sigh as she folded up the last bit of work. "'Ere you are deary. Jest put on yer 'at an' run with these." And in another minute or two the light little figure, laden with a large bundle, was speeding up the great busy thoroughfare.

Sometimes, with all the good will in the world, the constant journeying to the warehouse seemed to her long and weary, but tonight her thoughts of Christmas made her forget all fatigue.

"Ow lovely it would be," she thought, "if we could 'ave a real Christmas, with plum pudding an' 'olly an' presents! Fancy if I could give mother a present! I know what I'd like to give 'er—one of them cases to 'old needles and thimble an' a bodkin which I saw at 'Amilton's bazaar. But it ain't much good wishing." And here her reflections came to an end, for she found herself at the warehouse.

She had soon delivered her parcel to the fat manageress and received the poor payment due and, threading her way cleverly back through dusty corridors and down winding stairs, soon found herself in the jostling

street again. She turned her footsteps home, when a gleam of something bright on the dirty pavement caught her eye. She bent down. It wasn't—no—yes, it was—a silver sixpence! She picked it up. Could such luck be true? A silver sixpence found on the ground and therefore her very own, to do what she liked with!

"Why, now I'll be able to git mother a real Christmas present. It's jest like a fairy tale," she thought, her blue eyes shining with excitement, "an' I know what I'll buy, an' I'll get it, too, before I go 'ome, 'cause it won't take me a minit."

Hamilton's bazaar was not very far away, and, sure enough, in five minutes Flip was gazing steadily in at the brilliantly decked and lit window at a needlecase in red velvet and gold, an article which for all its gorgeousness was marked but fivepence three farthings.

"I want a needlecase with a thimble an' a bodkin an' a reel of cotton, like them up there," said Flip, with all the dignity of a possessor of wealth.

"Well, you must wait a bit!" snapped the assistant, turning to another customer, a stout, cheery looking man, accompanied by two rosy, well dressed children.

"I bin waitin' a long time. Why can't you git me one down?" replied Flip, with the perseverance of the east end child.

The girl impatiently detached one of the needlecases.

"Where is your money?" she asked. "Ere, of course. Wot d'yer think?" said Flip, handing her the coin.

The saleswoman took it, looked at it once carelessly, again narrowly.

"Why," she exclaimed, "this is not a sixpence at all—it is only an imitation one!" And, turning quickly, she beckoned the tall, imposing looking shopwalker, who stood near. "This child is trying to pass false money," she said as she gave him poor Flip's treasure trove.

He examined it and then, taking hold of the child's thin arm said:

"Come, come; where did you get this money from? Tell the truth now."

Flip's face went red and then very white. She did not realize or understand her offense. She only knew that if the sixpence was bad she could not buy the dearly coveted gift. Her heart seemed ready to break, and she burst into a flood of tears as she sobbed out:

"I found it in the street—it's true, it is. But I can't buy the present now."

The shopwalker hesitated, and then the cheery looking customer who had been waiting his turn to be served broke in by saying in a voice that had a strong country twang in it:

"Don't you cry, lassie. You don't mean any harm, I guarantee. Le me see that coin," he continued, turning to the shopwalker, who did as he was desired, for he was being addressed by an old and valued customer.

"Well, I don't know," said the cheery man. "It is not a sixpence, I agree, but it is a half sovereign and a very good one too." And in the twinkling of an eye he had deftly exchanged the imitation sixpence for a gold coin from his waistcoat pocket.

"There, my lass, take your money and run home."

Was it a dream? Flip pinched herself when she was in the chill street again. No, it was all true—a happy reality to find a bad sixpence and then see it transformed into a golden half sovereign. She had forgotten the velvet needlecase; she had but one thought—to get home—and home she soon was, where her anxious mother heard all her wonderful adventures.

So, after all, it was a real Christmas in the top room.—Exchange.

### HOPELESS

A three-hundred-pound man stood gazing longingly at the enticing display in a haberdasher's window. A friend stopped to inquire if he was thinking of buying the marked-down lavender silk shirt.

"Gosh, no!" replied the fat man wistfully. "The only thing that fits me ready-made is a handkerchief."

Use honey, corn syrup, dark syrup or maple syrup with hot cakes and on bread and muffins.

## The California Cultivator

Weekly—24 to 32 Pages One Dollar per Year

## The Cultivator Patterns

8426—Ladies' Waist. Cut in sizes 36, 38, 40 and 42 inches bust measure. This simple waist has a large hemstitched collar cut square in the back and rounded toward the front.

8618—Misses' and Girls' Cooking Outfit. Cut in sizes 6, 8, 10, 12, 14 and 16 years. This pattern includes the apron, cap and cuffs.

8641—Misses' or Small Women's Dress. Cut in sizes 16, 18 and 20 years. The waist has the surplice closing, and the skirt is a two-gored model with an apron front cut in a graceful point.

8110—Ladies' Shirtwaist. Cut in sizes 36, 38, 40 and 42 inches bust measure. The waist has wide box plaits at each side of the front and back.

8629—Ladies' and Misses' Long Coat. Cut in sizes 34, 36, 40 and 44 inches bust measure. The coat has long, loose lines, but it is given a trim appearance by the buckled belt which draws it in at the waistline.

8410—Children's One Piece Dress. Cut in sizes 2, 4, 6 and 8. The dress buttons from neck to hem, and has a good looking pointed collar.

8432—Ladies' Yoke Skirt. Cut in sizes 26, 28 and 30 years. This skirt has a hip yoke with a straight one piece lower section.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

### HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 c) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

### LIBERTY BREAD TO SAVE WHEAT

TESTED recipes which enable cut in use of wheat flour. These recipes are used in cooking classes in our schools.

One and one-quarter cups milk and water, one tablespoon sugar (or water), one tablespoon fat, one-half teaspoon salt, two and one-third cups flour, one cake compressed yeast, or one cup liquid yeast, one-quarter cup warm water, two-thirds cup corn meal.

Add sugar, fat and salt to liquid and bring to boiling point. Add corn meal slowly, stirring constantly until all is added. Remove from fire, cool mixture, and add compressed yeast, softened in one-quarter cup of warm water. Add flour and knead. Let rise till about double its bulk, knead and put in pan.

When light bake in moderate oven for at least an hour.

### Oatmeal Bread

Next to corn in popularity have come oats. This is a new oatmeal yeast bread, not unlike Graham bread in appearance, having a sweet nutty flavor much favored by those who like dark breads.

One cup milk and water or water, one teaspoon salt, one tablespoon sugar, one cup rolled oats ground through meat chopper, 2½ cups flour, one-half cake compressed yeast or its equivalent, one-quarter cup lukewarm water.

Scald liquid and pour it over the rolled oats, sugar, salt and fat. Let stand about half hour, until lukewarm. Add yeast softened in warm water. Add flour and knead. Let rise until double its bulk. Knead again and place in pan. When very light bake in moderate oven from 45 to 90 minutes, depending upon the size of the loaf.

### Barley Yeast Bread

In modern times it is little known, although it has all the properties to recommend it to the family larder.

One cup milk and water, one tablespoon sugar, one tablespoon fat, one teaspoon salt, one-half cake compressed yeast, one and one-sixth cups barley flour, two and one-third cups wheat flour.

Soften the yeast in part of the liquid. Combine ingredients. Mix into a dough. Knead and let rise till double its bulk. Knead again and put in pan. When once more double its bulk, bake about 45 minutes. This makes a dark bread and is best when made into crusty, small buns.

### Rye Bread

Rye, also generally grown, is less pleasing to the majority of people, in breads, but here is a rye yeast bread for variety:

One cup milk and water, one tablespoon sugar, one tablespoon fat, one teaspoon salt, one-half cake compressed yeast, softened in two tablespoons water, 2¼ cups rye flour, 2¼ cups wheat flour.

Combine ingredients. Mix into dough and knead. Let rise until double its original bulk. Knead again. When again double its bulk, bake 45 minutes.

### Potato Yeast Bread

One-half cup milk and water or water, four tablespoons sugar, four tablespoons fat, 1½ teaspoons salt, four cups boiled potatoes, mashed fine, eight cups flour, one-half cake compressed yeast, one-quarter cup warm water.

This makes three loaves.

### LIBERTY SWEETS

Should candy be omitted from the Christmas box for the soldier in camp, and from the little ones' stockings? Yes, if we are to create a surplus for the millions of men on the firing line, the United States Food Administration for California says: A clever combination of fruits and nuts made with brown sugar and syrups of various kinds, however, may be substituted for candies. Such sweets keep well, are universally liked, and are wholesome.

### Popcorn Candy

For making popcorn candy either honey, maple syrup, molasses, or corn syrup may be used. To one cup of syrup allow one tablespoon of vinegar. Boil together until syrup hardens when dropped into cold water. Pour over freshly popped corn and

mold into balls or fancy shapes for the Christmas tree.

### Bitter Sweets

An attractive variety of candies may be made by dipping sweet fruits in bitter chocolate. Use for this purpose dates, citron, candied orange peel or crystallized fruit. Melt unsweetened chocolate in a double boiler. Keep the chocolate just warm enough to prevent solidifying. With a silver fork drop pieces of fruit in the chocolate. See that each piece is completely coated, then remove to waxed paper to harden.

### Stuffed Dates

Remove the stones. Fill with peanuts, walnuts, hickory nuts or any nuts available. Peanut butter makes a good filling that is different. Press the dates in shape and roll in granulated sugar, chopped nuts or a mixture of cocoa and powdered cinnamon.

### Chocolate Dainties

Put through the meat chopper a half cup each of dates, figs, and nut meats. Add one tablespoon orange juice, a little grated orange peel, and one square of melted unsweetened chocolate. Mould into balls and roll in chopped nuts or granulated sugar. This mixture may be packed in an oiled tin, put under a weight until firm, then cut in any shape desired.

### Maple Creams

Boil one cup maple sugar with one cup water until it forms a soft ball when dropped in cold water. Remove from the fire and stir rapidly until it becomes creamy. Form into balls the size of marbles and put nut meats on either side. Lay on wax paper to cool.

### Fruit Paste

Put through the meat chopper enough cherry, peach or quince preserves to make a half pint with the juice. Heat fruit and add two tablespoons of gelatine, previously softened in a very little cold water. Stir well, and continue stirring until it begins to cool and thicken, then pour into oiled dish to make a layer one inch thick. Let dry slowly, sprinkle with sugar and place in box with waxed paper between the layers. A mixture of dried apricots and dates may be used for this paste. Wash apricots and soak over night in enough water to cover. Pour off water, bring to a boil, pour over apricots and let

stand till cool. Put apricots and dates through a meat chopper and proceed with the proportions as given.

For dessert serve a fruit salad or fruit omelet; cream cheese with honey or fine preserves; fruit desserts with honey or just enough white sugar to bring out the fruit flavor.

 ers at shipping points

## HAY

Under date of December 8, Scott,  
 Magner & Miller says:  
 Arrivals during the past six days were  
 only 712 tons. These light arrivals were  
 occasioned only by the stringent car situ-  
 ation which is worse now than it has  
 been of late. Inquiry in the interior of  
 the state is now becoming active and  
 sales are being made daily at higher fig-  
 ures than are quoted here in San Fran-  
 cisco. In fact there is a decided under-  
 current of strength in the entire hay situ-  
 ation in the western part of the United  
 States which appears to justify the  
 higher basis of values in our own state.  
 Livestock has been suffering recently on  
 account of the shortness of old pasture,  
 and in some sections they are compelled  
 even now to use hay to carry the stock  
 along.

The situation in the southwestern part  
 of the United States where the hay crop  
 was nearly a failure, (this particularly  
 applies to the states of Texas as well as  
 Oklahoma) will, no doubt, necessitate  
 drawing on California.

## Let the Things Needed in the Home Be Your Christmas Gift

A selection this Christmas of a useful and beautiful gift for the home not only emphasizes your own discrimination and good taste, but it convinces those to whom the gift is presented that you fully appreciate their sense of the fitness of things. Such a gift constantly reminds them of the splendid sentiments which inspire a sensible gift at this time when a frivolous one has no place in the thoughtful person's plans.

**You'll Find the Sensible, Practical Gifts This Year at Barker's**

When you visit Los Angeles on your Christmas shopping tour, don't fail to visit Barker's Store for innumerable suggestions of what is best to give for the home. If you can't come to the city, just write our Mail Order Department about what you wish. Secure the services of our expert shoppers who will select for you with complete satisfaction.

## Citrus Fruit Market

Los Angeles, December 12, 1917.

Extreme cold in many Eastern markets has lessened the sales of citrus fruit, and this has resulted in slight depression in the market. However, Navelis are held firm because extreme shortage in supply of Navelis not only in Southern California but Northern and Central is just beginning to be appreciated by Eastern trade. Central California has probably shipped more than a half of its season's output and will probably have yet to ship not more than 700 cars. Southern California has shipped practically nothing as yet. Shippers have tried to send some fruit which would not pass inspection. Lemon markets remain firm.

## Shipments

Shipments of citrus fruit from Southern California since November 1, 1917: Oranges, 1947; lemons 362, total 2309. To same date last season, oranges 1687, lemons 558, total 2245. From Central California, oranges 1132, lemons 39, total 1171. To same date last season, oranges 2183, lemons 93, total 2276. Shipments from Northern California, oranges 112. To same date last season, oranges 586.

## AT THE AUCTIONS

## MARKET NOTES

San Francisco reports a much lighter tonnage of barley in warehouses and on wharves on December 1, than same date last year; 1917, 33,821 tons; 1916, 58,777 tons. Wheat in hand this year, 26,815 tons, last year, 14,834 tons.

Watsonville is prevented from shipping apples as freely as desired this year because of car shortage.

The supply of casabas, Christmas melons and the late keepers seems to be shorter than previous years.

Bakers of Los Angeles announce that they are compelled to stop the baking of fancy bread loaves and hereafter will bake only four standard loaves weighing, one, one and a half, and two and four pounds.

The immense government requirement in condensed milk is creating serious conditions in cheese and butter production. Eastern cheese makers are now paying \$3.20 to \$3.50 per hundred pounds for milk and condensaries are offering as high as \$3.70. The cheese makers assert they cannot pay any such prices with cheese remaining as it is.

Shipments from California for the week ending December 10 are: Lettuce, 42 cars, mixed vegetables, 65; celery, 194; grapes, 10; raisins, 167; cauliflower, 25; sweet potatoes, 7; dried fruits, 73; mixed fruits, 11; apples, 10; onions, 5; potatoes, 48; tomatoes, 3; cabbage, 1; artichokes, 3; pumpkins, 1.

Governor Cantu of Lower California has appealed to cotton growers who have lands over the line for funds to send a commission to Washington in an endeavor to secure a modification of the order stopping free and unrestricted passage between the United States and Mexico.

## NEED OF MINERAL SALTS

The problem of the selection of food grows more complicated as prices advance and the available food materials decrease. One of the most vital points in which the diet is likely to fall short is in the mineral salt content and in the shortage of growth promoting substances called vitamins.

The following suggestions are given for conserving these essential nutrients by the Ohio Council of Defense:

1. Water in which vegetables are cooked should be either served with the vegetable or used in making of soup.

2. Potatoes should be cooked in the skins regardless of the final method of serving. This is also true of many other vegetables and fruits.

3. Unhulled or brown rice is greatly to be preferred to the polished rice from which much valuable material has been removed.

4. Fine patent flour is deficient in both mineral salts and vitamins. The milling of a higher per cent of the wheat kernel into flour would remedy this deficiency.

5. Milk should be the last thing excluded from the diet of children, because of its many advantages as a tissue-building and growth promoting food. "A quart of milk a day for every child is a good rule."

6. Skim milk, despite its shortage of fat, is as valuable a source of vitamins as whole milk.

7. Ordinary "greens" are an excellent source of mineral salts.

Linn County, Oregon, will ship out ten carloads of beans this year. Though the yield was very light on account of the dry summer, it is 100 per cent in excess of last year's.

## THE CASE AGAINST RATS AND MICE

Rats and mice are among the worst animal pests in the world, according to biologists of the United States department of agriculture.

From their home among filth they visit dwellings and storerooms to pollute and destroy human food.

The rat carries bubonic plague and many other diseases fatal to man and has no doubt been responsible for more untimely deaths among human beings than all wars of history.

In the United States rats and mice destroy each year in homes, in factories, stores, and warehouses, in cars and on ships, crops, poultry, and other property valued at more than \$200,000,000—an amount equivalent to the gross earnings of an army of 200,000 men.

Grain eaten and wasted by rats and mice on many farms would pay all the farmers' taxes.

Rats and mice breed from six to ten times a year, producing their destructive kind at an alarming rate.

They are parasites without a single redeeming characteristic.

## A GREAT CATALOGUE

The Selma Cling has place of honor on first cover page of the most complete and instructive nursery catalogue we have ever seen. The Selma Cling is a mid season canning peach, following the Tuscan, and one long wanted by canners of California. This peach has been grown in the state for nearly 40 years, but of the peach more may be learned on page 22 of the great catalogue which we refer to. There are, in the catalogue including cover, an even 100 pages, and with fine type and illustrations it is literally packed with information invaluable to the orchardist. This information is brought together almost entirely by Mr. Roeding himself.

Regarding it the Fancher Creek Nur-

sery says: "Although Mr. Roeding's views are rather pronounced and he is regarded as a radical by a great many people, we wish to say that his own orchards and vineyards comprising 1000 acres in several counties in the state, embracing a number of varieties of fruits, all of which by the way are profitable properties, are a sufficient demonstration that his methods of pruning, culture, etc., are based on sound principles. Mr. Roeding is fortunate in possessing an open mind. He is not so wedded to his own ideas that he is unable to learn from others. No one probably realizes more forcibly than he that results are the only things that count."

This statement is easily verified by people who have come in contact with Mr. Roeding during the last 32 years of his connection with the nursery business. The service which comes from this long experience is to be had for the asking by any patron of this nursery. We will refer directly to the catalogue again and call attention to pages four, five and six where explicit information as to systems of planting orchard trees may be found, not only given from Mr. Roeding's own experience but from carefully worked out plans of a practical civil engineer. Charts and explanations are given which show the methods and advantages in the square system, the quincunx, the hexagonal and the alternate systems. As noted, there are not only full instructions given in the books, but charts or diagrams make exceptionally plain every step in the work of laying out an orchard. Methods of pruning and how to shape the young trees are made plainer with literally dozens of photographs from trees pruned and unpruned.

Every prospective planter should write at once for this great catalogue to Fancher Creek Nurseries, Fresno.

## New Record Book for California Producers

The California Cultivator has just published a new and most useful Record and Account Book for California Fruit Growers, Farmers, Live Stock Men, Dairymen, Beet Growers, Poultrymen, and all other California Producers,—something that has long been needed but never before attempted, to suit the peculiar diversity of products of this state.

Among the special pages provided are the following:

"Fruit Crop Record," "Live Stock Record," "Poultry Record," "Daily Record of Labor," "Individual Tree Record," "Dairy Record," "Farm Crop Account," "Live Stock Account," "Household Expenses," "Field Expenses," "Cash Receipts," "Inventory," and others that form a complete, easy-to-keep record system.

There is nothing complicated about this Account Book but it is complete and will be of great value to anyone wishing to know "where the money goes," which crops pay and which do not, who owes you and how much, and many other things to which you may quickly refer.

A copy of the California Cultivator Farm Record and Account Book will be sent to any address prepaid and a year's subscription to California Cultivator, new or renewal will be credited upon receipt of \$1.25. Send all orders to

## Arizona Method of Cleaning Irrigation Ditches

Results at Salt River Valley Experiment Station Show Sheep to be Admirably Fitted for the Work. Other Experiments.

**E**XPERIMENTAL work in the extermination of Johnson grass begun last year has been continued. One field that has been plowed and harrowed at frequent intervals for nearly two years, without any irrigation, still shows a considerable growth of Johnson grass.

One field that was equally as badly infested was planted to cotton in the spring of 1916. This was cultivated through the season, somewhat more than ordinary tillage methods being given. Considerable hand-hoeing was given the field, the effort being to keep the grass from getting a start. The cotton was planted late and cut short by an early frost, yet despite this handicap it paid for the extraordinary labor and showed a good profit.

The history of the field this season proves that this is the practical method of getting rid of this weed. The cotton was followed with Tepary beans in the spring of 1917. Only a few scattering shoots of grass have shown this season, and as Superintendent Wood says, "No more cultivation is required the second season to keep down the grass than should be given to any cultivated crop by any good farmer."

This would seem to settle the question of the best way to exterminate Johnson grass; proves that the old way advocated by many of keeping the water off and fallowing is not practicable, and incidentally disposes of the bugaboo which Johnson grass has been supposed to be.

I remember a few years ago some farmers got alarmed because they said that "Bermuda grass was running out their alfalfa." Pretty soon, observing, thinking farmers began to notice that a Bermuda sod turned under was the best sort of a preparation for almost any crop, and the explanation was that the soil was supplied with much needed humus. Now some farmers are beginning to find that Johnson grass supplies a tremendous amount of humus, and already I find that there is a change of sentiment towards this pest (?).

One of our clear headed farmers told me a few days ago that he would like to buy a quarter section that was well set in Johnson grass because he felt that he could control it and handle it so as to make it even more profitable than the same acreage of alfalfa.

A useful plant out of place becomes a weed. In our impatience to exterminate some of these plants that persist in growing where we want some other plant to grow we overlook the opportunity to use the weed.

In New England we used to fight the ox-eye daisy, or white daisy, as it was frequently called. My father spent many weary hours in digging out any stray daisy plants that got started. It was an invariable rule never to pass by a daisy plant on the old farm. We had to stop and dig it up or mark the

spot and return to it at a more favorable time.

One day a new man moved into the neighborhood, right on to the poorest, worst daisy infested farm in the district. We wondered how he was going to get rid of the daisies. Well he didn't try, just went ahead with his

ing the scattering of weed seeds. Among the first to use sheep for this purpose was the Salt River Valley experimental farm, although hundreds of farmers now have their ditches fenced.

Sudan grass is becoming a very important crop in the Salt River Val-

state highway near Mesa and about 15 miles east of Phoenix. There is considerable need of a dairy herd and of barns and silos on the farm. These no doubt will come in time, and in the meantime the work which is being done is proving of great value to the valley farmers.

Sheep on the Ditch Bank

The hired men that work without pay, board themselves, and pay for their board Salt River Valley Experiment Farm.

farming and paid no attention to them. He had found that if cut early they made the best milk producing hay to be had. So he cut his daisy hay early, fed it to good cows, fertilized his fields, reseeded from time to time, gradually built up the farm to a high

ley. At the station farm it is found that Sudan grass sown in May produces about two tons the first crop and about four tons additional in the three following cuttings. A new use is being made of Sudan grass in the Salt and also in the Yuma Valleys.

An Irrigation ditch which has "gone to grass."

An Irrigation ditch which is kept free from vegetable growth by sheep.

state of fertility, and got rich, not exactly in spite of the daisies but because he found that it proved better to use the weed than to fight it.

I think that we are gradually coming to the more intelligent use of weeds rather than spending too much energy in a one-sided fight of extermination. The work which the experimental station is doing will help to show that the most economical way is after all the simplest.

Speaking of weed control, one of the most potent factors of weed distribution is the irrigation ditch. This is hard to keep clean and free of grass and plant growth. To keep it cut out by hand is a slow, expensive job. Fencing the ditches and grazing sheep in the ditches and on the ditch banks is by far the most satisfactory and the cheapest way of keeping the ditches in good condition and prevent-

This is to thoroughly disk alfalfa fields immediately after the first crop is cut in the spring and seed to Sudan grass. At the station farm it is found that with the best stands of alfalfa the Sudan grass is choked out, but in fields of old alfalfa where the stand is not quite perfect, the Sudan comes up and remains in a semi-dormant condition until hot weather. Then it shoots up and two cuttings can be made which are mostly Sudan with a little alfalfa; then the fall cutting will be nearly all alfalfa.

The practice of the best farmers has long been to seed barley in the old alfalfa fields in the fall, making lots of winter pasture and a big cutting of grain and alfalfa hay in the spring. I expect to see the seeding of Sudan grass in the spring practiced almost as universally.

The station farm is located on the

### INCOME TAX

**Y**OU won't have to figure out your own income tax all by yourself hereafter. The government is going to send out men to help you. It will be up to you to hunt up these men, who will be sent into every county seat town, and some other towns besides, to meet the people. Postmasters, bankers and newspapers will be able to tell you when the government's income tax man will be around and where to find him. He will answer your questions, swear you to the return, take your money, and remove the wrinkles from your brow. Returns of income for 1917 must be made between January 1 and March 1, 1918.

"The government recognizes," Collector of Internal Revenue Carter of Los Angeles, said today, "that many persons experience a good deal of difficulty in filling out income tax forms. The government recognizes that taxpayers at points where collectors' offices are not easily accessible find it hard to get proper instruction in the law. Next year, when every married person living with wife or husband and having a net income of \$2000, and every unmarried person having a net income of \$1000 for the year 1917 must make return of income on the form prescribed, there will be hundreds in every community seeking light on the law and help in executing their returns. My own and every other collection district in the nation will be divided into districts, with the county as the unit, and a government officer, informed in the income tax, assigned to each district. He will spend hardly less than a week in each county, and in some counties a longer time, very likely in the court house at the county seat town. In cities where there are collector's branch offices, he will be there, and in other cities possibly at the city hall. My office will in due time advise postmasters and bankers and send out notices to the newspapers stating when the officer will be in each county. It will be unnecessary for prospective taxpayers to ask my office for forms on which to make returns. The officer who visits their county will have them."

It may be stated as a matter of general information that "net income" is the remainder after subtracting expenses from gross income. Personal, family, or living expense is not expense in the meaning of the law, the exemption being allowed to cover such expenses.

The new exemptions of \$1000 and \$2000 will add tens of thousands to the number of income taxpayers in this district, inasmuch as practically every farmer, merchant, tradesman, professional man and salary worker and a great many wage workers will be required to make return and pay tax.

The law makes it the duty of the taxpayers to seek out the collector. Many people assume that if an income tax form is not sent or a government officer does not call, they are relieved from making report. This is decidedly in error. It is the other way round. The taxpayer has to go to the government, and if he doesn't within the time prescribed, he is a violator of the law, and the government will go to him with its penalties.

## Diseases of the Citrus Tree

By Prof. H. E. Stevens, Florida Experiment Station

SEVERAL well-known fungus diseases are commonly found in the citrus groves of Florida. Some of these are widely distributed and cause a large amount of injury to trees and fruits each season. Others are less regular in occurrence and perhaps more restricted in distribution, but during favorable seasons they are frequently responsible for serious losses in fruits and no little injury to the trees. There are certain diseases of this group that attack only the main parts of the tree, such as the roots, trunk and branches. Others are found chiefly on the fruits or foliage and a few attacks all parts of the tree, the fruit included.

These diseases, along with the insect pests, usually share the growers' annual returns from his grove, and in some cases they may take a large part, if not all, the profits, and perhaps make heavy inroads into the principal of his investment. It is not uncommon for 25 to 50 per cent of a citrus crop to be lost through the ravages

A Fine Cluster

Bunches of dates sometimes weigh 50 pounds, and the effort is to secure bunches that ripen as nearly as possible at the same time. With some varieties artificial incubation is necessary.

of a single disease, or a much higher percentage may be rendered inferior or worthless from attacks of one or several of the more common citrus troubles. I have seen cases where fully 90 per cent of the fruit in a grapefruit grove were affected by citrus scab, and perhaps half of this fruit would have been graded as culls. A similar condition frequently occurs where melanose is severe. Stem-end rot may cause from a fourth to one-half of the fruit to drop, and it has been estimated that in the past season eight to ten per cent of the fruit shipped out of the state each season was lost through decay. The combined injury of these various diseases causes losses that will amount to a very large sum each season. They levy an annual tax on the citrus growers of the state, the magnitude of which is not fully realized. All along the line, from the time the tree is planted until it is producing; from

the time the fruit appears on the tree until it arrives on the market, these diseases are responsible for losses that directly affect the growers in dollars and cents. They are parasites in a double sense, affecting not only the vitality of the citrus tree, but the growers' pocketbook as well. If the citrus growers of Florida were taxed a sum by the state each year, equal to the total losses caused by diseases, such action would be vigorously resented and immediate steps would be taken to remedy such a condition. But with the diseases, in a great many cases, they are allowed to continue on from season to season, imposing an enormous tax, which the grower perhaps only feebly protests against or accepts as a condition that cannot be avoided.

If such conditions could not be remedied the outlook for the citrus industry would be far from promising. It appears to me that the remedy lies in a better understanding of these diseases and the method for their control by the citrus grower himself. A great deal of information of a practical nature is available on this subject and a great deal of advice and instruction along this line has been given out in the past, but unless this is accepted and applied faithfully and intelligently, very little progress can be made in the direction of disease control. Disease control is one of the problems connected with the growing of citrus fruits. It is one that must be fully recognized and mastered, if success is to be expected. Disease control is probably more important than any other single operation connected with the production of citrus fruits, and it is the one of which the least attention is usually given. This is amply illustrated in the depleted condition of many grove trees throughout the state and in the large amount of worthless and inferior fruit that is grown each season. Such conditions to a very large extent might well be avoided.

A grove may be suitably located, well cared for regarding its culture, judiciously fertilized, and it may produce ample crops of fruit under these conditions, but if this fruit is unsalable or if it rots before it can be disposed of, the grower has accomplished nothing for his efforts. His time, money and energy have been wasted, which he might perhaps have spent to much better advantage in some other direction. There are many citrus growers working under conditions similar to these today. They give close attention to the use of fertilizers, to the cultivation of their groves, and the production and marketing of a large crop of fruit, which is highly commendable, but they usually neglect disease control, which may be the main factor determining the value of such a crop after it is produced. It costs just as much to produce an unsaleable fruit under these conditions as it does one of perfect quality, and there is certainly a wide difference in the return from these two classes of fruit. The same will apply to grove trees. A diseased tree is a dead expense and only tends to reduce the profits from those that do pay.

## "Substantially Colored"

STATE Commissioner of Horticulture Hecke is sending out a "substantially colored" orange, that is, an illustration in colors indicating the orange which will pass as "substantially colored". This provision of the standardization law has caused no little comment, even friction on the part of the growers in some of the citrus sections. On the back of the color card is given the text of sections 11 a and 11 b which specify the standard for the fruit. We quote these sections as follows:

Section 11a. It shall be unlawful for any one to sell, offer for sale, ship or deliver for shipment any citrus fruits, which are immature or frozen to the extent of injuring the reputation of the citrus industry of the State of California if shipped, and for any one to receive any such citrus fruits under a contract of sale, or for the purpose of sale, or for shipment, or

for delivery for shipment; provided, however, that nothing in this section contained shall be construed to prevent the sale or shipment for sale of frozen or otherwise defective fruit to a by-product factory, or the manufacture thereof into citrus by-products; nor shall this section apply to the sale, or contract for sale, of citrus fruits on the trees, nor shall it apply to common carriers or their agents who are not interested in such fruits and are merely receiving the same for transportation.

Section 11b. An orange shall be deemed properly matured for sale, or to be offered for sale, for shipment, or to be offered for shipment, under the provisions of this act, either when the juice contains soluble solids equal to, or in excess of, eight parts to every part of acid contained in the juice, the acidity of the juice to be calculated as citric acid without water of crystallization, or when the orange

is substantially colored on the tree. The foregoing provisions shall not apply to shipments of oranges to foreign countries other than the Dominion of Canada, during any season provided such shipments are made after the first day of November.

### SHIPPING REGULATIONS

Effective December 1, shippers of oranges and lemons will be required by food administration regulation to load refrigerator cars seven boxes wide and two high the entire inside length of the car, either under ventilation or refrigeration.

Shippers of vegetables and deciduous fruits are requested to advise the limit of safety to which they may increase the carload above minimum, so proper regulations may also be issued at once. It is absolutely necessary that everything reasonably possible be done to increase the efficiency

of refrigerator cars and the railroad power handling perishable commodities, in order that the present refrigerator car supply may handle perishable traffic for the year just beginning.

There is little hope of the car shops being able to fill railroad orders for additional refrigerator cars to any extent during the coming year, because of being employed on priority government war orders.

A careful survey of the entire transportation conditions just made, we believe justifies that conclusion that

of getting results. The organized farming interests of the state are squarely behind this committee which will meet immediately and plan to cooperate with other organizations in solving our problem."

The names of the labor committee were given in last week's Cultivator on Page 611.

CALIFORNIA BULLETINS

Another bunch of valuable bulletins and circulars has been issued by the University of California college of ag-

Dates at Mecca, Riverside County

This engraving is used by courtesy of the Coachella Valley Submarine. This is an imported plant offshoot of a date grown in Algiers. It has been planted for eight years in Mecca. The date industry of the Coachella Valley has grown very rapidly, and it is believed that it will add greatly to California's wealth. The imported date offshoots are the smallest feature in the date industry, for success has been had with many seedlings grown in the valley. This has been necessary because the demands have far exceeded any possible importation.

with maximum cooperation, the railroads will be able to handle perishable traffic without serious delay.

LABOR COMMITTEE

Commissioner Hecke has issued the following statement: "No more important question is before the people of California today than that of farm labor supply. The farmers must do their part in feeding our Allies and in keeping down the cost of foodstuffs to the consumer at home, and therefore they must be given a dependable supply of labor to harvest greatly increased acreage. The testimony of the best informed farmers in the state is to the effect that without additional labor the 1918 crop will fall below the production of 1917. For this reason the farmers and fruit growers at the fiftieth fruit growers' convention instructed me to appoint a labor committee which would take up with the state and government authorities this vital question of a labor supply. This committee has been appointed after mature deliberation and consultation with the various farming interests of the state, and I feel certain that no better committee could be selected at this time, nor one that would be surer

riculture. Every one touches topics of present day interest. They are: "Home Pickling of Ripe Olives" by Frederic T. Biloletti; "Prevention of Stinking Smut of Wheat and Covered Smut of Barley" by W. W. Mackie; "Utilization of Idle Lands for Wheat" by Chas. F. Shaw; "Poultry on the Farm" by J. E. Dougherty, Circular 186; "Infectious Abortion in Cows" by F. M. Hayes, Circular 183; "Extending the Area of Irrigated Wheat in California." by Frank Adams, Circular 182; "Selecting Corn Seed," Ernest B. Babcock, Circular 180; "Potash from Tule, and Fertilizer Value of Certain Marsh Plants," by P. L. Hibbard, Bulletin 288.

THE TWO SIDES

"There are two sides to every argument," said the ready made philosopher. "Yes," replied the gloomy person, "but it makes a difference which side you choose. There are two sides to a piece of fly paper."

The devil has so many people working for him that he can loaf most of the time.

# Farm for Profit

## and Help U. S. Win the War

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

## MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent, produce to the limit. Fertilize your land—the increase in yield and price of crops will more than pay all the fertilizer expense—it will enable you to farm with profit. Don't spend your time working worn out land. Make It pay—Fertilize with Hauser's Organic Fertilizer.

## A New Persimmon

IN THE illustrations may be seen the Tamopan persimmon. It is the newest introduction to California, brought here by a returned missionary, K. M. Gordon now living in Los Angeles County. Regarding this fruit Mr. Gordon says:

"The writer arrived at Tientsin, North China, in November, 1904, just after the persimmons were well on the market. He has spent all, except two, of the intervening years in that interesting land. The first day in China he bought some persimmons, and liked them very much and has enjoyed them more than any other fruit ever since.

"When he returned to America on furlough in 1911, he succeeded in securing some of the Tamopan (meaning big grist stone because of their large size and flat shape) persimmon trees from a region noted for producing large and fine flavored persimmons of this variety. He was fortunate enough to secure good, healthy trees which were planted in Fresno County. The trees began to bear fruit in 1913.

"We have been asked, how are these persimmons superior to those already on the market? As the Valencia and Washington Navel are the leading commercial oranges of California, as the Eureka is the leading commercial lemon, as the Bartlett is the leading commercial pear, and as other varieties of fruits have leading commercial varieties, so the Tamopan is the leading commercial persimmon of North China. We believe that it is destined to be the leading commercial persimmon of North America.

"The Tamopan persimmon tree is

meaty and of excellent flavor. It is large, measuring from three to four inches in diameter and weighing from six to ten ounces each. The skin is rather thick and tough. This enables fruit dealers in North China to store the fruit in a cool room so as to have it on sale from October until April. The writer and many other Americans

Persimmon Vender in Tientsin  
This Chinese street merchant is selling Tamopan persimmons brought down from Manchuria.

and Europeans residing in North China always had this fruit on the table every day so long as it could be secured at the market."

### PISTACHE EXPERIMENTS

G. P. Rixford, physiologist of the bureau of plant industry, writes: "The article on 'Pistache Experiments' by Claude D. Tribble in your issue of No-

Primitive Plowing

This photograph was taken in a persimmon orchard north of Pekin near Ming tombs.

hardy, adapting itself to extreme hot and cold weather. In North China, its native home, the mercury frequently rises as high as 113 degrees and drops as low as 15 degrees below zero. It is a large tree, having a tendency to grow tall. It is seedless and is propagated by grafting. The writer does not know the life of the tree. He has seen some certainly more than 50 years old. These old trees bear several hundred pounds of fruit each crop.

The fruit is seedless. The flesh is

venember 24 requires some correction. He mentions the Carpellate variety as proving to be a very small variety and worthless. This variety has fruited at the United States Introduction Garden, Chico, and produces large nuts with green kernels, a large proportion of the shells of which are naturally split, an advantage when treated with salt, as almonds are treated, as it allows the brine to enter. The Carpellate, so called, probably because Thomas H. Kearney of the United States department of agriculture, who secured the variety, with others, at Bronte, Sicily, failed to get the local name. The variety is first class in every particular, and David Fairchild, chief of the office of foreign seed and plant introduction, proposes to call it "Bronte," an appropriate name under which it will probably be distributed hereafter.

"The printer probably made Mr. Tribble call the 'Koz,' the 'Kog.' This variety, with the Large Red Aleppo, was presented to the department by an ex-missionary, a resident for 30 years in Syria near Aleppo. The Koz, known in that country as the 'Walnut Pistache,' turned out to be a male when blossoming at Chico and on the grounds of Mr. Tribble."

### APPLE SCALD

There has long been trouble with cold stored apples scalding where left in storage room for a long period. It has now been discovered by experts Brooks and Cooley of the department of agriculture that stocks of apples in closed room generate quantities of carbonic acid gas. The lack of air movement and the depositing of moisture on the fruit are also factors in this scalding. The reduction of the high humidity and the changing of the air in the storage occasionally is said to reduce and even prevent entirely this trouble. The department says:

Well aerated apples remained free from scald, while in all cases poorly aerated ones handled in the same way from the time they left the tree throughout storage, became badly scalded.

Scalded fruit was found to be more mealy and poorer in flavor than unscalded. Scald, in addition to rendering the fruit unsightly and reducing its market value, rendered the apples extremely susceptible to certain storage rots.

Apples were apparently little harmed by several weeks' storage under poorly ventilated conditions if better aeration was provided before the fruit reached a certain critical period in its storage ripening. The maximum length of time that the fruit can re-

main in poorly ventilated storage without incipient injury, however, has not yet been determined for many varieties. Final recommendations in regard to the frequency of ventilation, therefore, can not be given as yet, but the investigators state that the fundamental fact that ventilation will prevent the disease has been established, and advise storage men to avoid taking chances of smothering the fruit.

Scald, it was found, increased with an increase in temperature from 41 to 68 degrees Fahrenheit. Higher temperatures were unfavorable to the development of the disease and with certain varieties such as Grimes Golden 32 degrees was more favorable to the development of the disease than 41 degrees Fahrenheit.

Investigations of this disease by the department specialists are still going on, but the facts already obtained indicate the necessity of important changes in storage methods.

#### LOS ANGELES COUNTY FARM BUREAU ORGANIZED

At the mass meeting last week for the formation of a Los Angeles County farm bureau there was a membership reported of about 2240. At the original meeting called by the Los Angeles County council of defense 48 paid-up subscribers were secured. At that time a temporary organization was effected of which Senator Cogswell was the chairman. This temporary organization, with Dr. H. J. Webber of the university aiding, has secured an additional membership of 1891. Japanese committees were appointed to work among the Japanese farmers, and this committee reports a Japanese membership of not far from 300.

The next step will be the organization of local centers in every section of the county. These centers will elect delegates to the central or county bureau, and these delegates will have power to perfect the county organization. Meantime the matter has been presented to the board of supervisors of the county, and without any question the board will recognize the demands of the times and at once appropriate the \$7,000 necessary for the first year's expense of the one county agent and his five helpers.

It is unfortunate that there seems to have developed a line of cleavage between "farmer" and "horticulturist." Membership in local centers was secured with the expectation that the constitution and by laws as given in the state bulletin should be adopted, but at this meeting a new constitution was presented, differing in an important respect from this constitution. A director from each farm bureau center was allowed to stand as in the original, but instead of four directors at large to be elected in the annual meeting, the new constitution provides that two women directors at large be chosen by the directors. As the representation from fruit growing sections will be greatly in excess of the representation from general farming sections, the "farmers" feel that there is opportunity for discrimination.

The minimum number which a county of the size of Los Angeles can have and receive aid from the government by the appointment of one of its officials for this work is about 1600. As this has been exceeded by some six or seven hundred, it is plain to be seen that Los Angeles is answering the call to produce "more and better."

#### COOPERATION IS INSURANCE

Writing in the Sun-Maid Herald Dr. Shahbazain, a raisin grower of Fresno County, says:

"You must expect to work for success," he said, "and work does bring success. You must also use good judgment in handling vineyard problems. The raisin business is best in the hands of the association. We are our own market masters, and by working together we bring success to each other.

"Cutworm, frost, sunburn, drouth and unseasonable rain are natural losses which can be minimized by the careful grower. The greatest loss of all comes after the raisins are in the sweat box. If the price of raisins gets below the cost of production we have hard times, as everyone knows. The association of growers is our insurance that the raisin price does not go below the cost of production."

## Standard Barrel

FROM the bureau of standards, department of commerce, is received a circular with rules and regulations promulgated under the authority of the federal barrel law. In a letter regarding it the bureau says:

"You will note that a standard barrel is provided for, together with three specified subdivisions thereof, namely, the three-quarter, one-half and one-third barrels. These standards are mandatory ones and must be exclusively used for all purposes within the purview of the law. If a barrel of other size containing fruits or vegetables or any other dry commodity is sold or offered or exposed for sale anywhere in the United States, or if any such barrel is shipped in interstate commerce, the provisions of the law are violated, and any person guilty of a willful violation is liable to

the penalties provided for therein. The only dry commodities which may be sold in other sized barrels are cranberries, for which special size barrels are provided by this act; lime, the sale of which is regulated by the provisions of the federal lime barrel law; and such dry commodities as are within the proviso of section 3, namely, those sold exclusively by weight or numerical count. This proviso is a commodity exemption and not an exemption of an individual shipper. If a commodity is sold exclusively by weight or numerical count, then the commodity is not within the purview of the law. If it is not sold exclusively by weight or numerical count, and this is a matter of fact, then the commodity is within the purview of the law and everyone is required to sell it in the same manner, namely, in the barrels and subdivisions standardized.

There are no fruits or vegetables commonly sold or shipped in barrels,

which are exclusively sold by weight or numerical count, and therefore, to all of these the law applies."

The standard barrel must contain 105 quarts or 7056 cubic inches, three-quarters barrel 78 3-4 quarts or 5292 cubic inches; a half barrel 52 1/2 quarts or 3528 cubic inches; one-third barrel 35 quarts or 2352 cubic inches. Of course there are other provisions giving the diameter, distance between heads, circumference of bulge, length of stave and other items. The bureau does not demand absolute exactness, but we note in the diameter, the "tolerance" is only one quarter of an inch, also one-quarter of an inch tolerance as to distance between heads, with a tolerance of one and three-eighths inches in the circumference of bulge and half inch in the length of stave. The entire text is given in the bulletin. We doubt not it may be secured by writing Director S. W. Stratton, Bureau of Standards, Department of Commerce, Washington, D. C.

Every Fruit Grower  
Should Have This  
Book

## Grow Apples For Profit

CALIFORNIA is a great Apple growing state. There are thousands of acres of good apple land, which can be bought reasonably, at elevations from 2000 to 4000 feet which are splendidly suited to the growing of apples.

The local markets can readily consume all of the good, high quality apples that are produced in California. In addition to this, the export trade is rapidly increasing.

#### Apricots

As a commercial proposition, California, particularly, has a monopoly in Apricot culture. We can supply trees budded on Peach, Apricot and Myrobalan roots. The Tilton, Blenheim and Hemskirke have proven wonderfully profitable varieties.

#### Cherries

The enormous profits realized from Cherry orchards, the popularity of the fruit in the East, the very excellent keeping qualities, present a series of reasons for extending the field for the planting of Cherries in all sections of the state suitable to Cherry culture. Our stock of Cherry Trees was never finer.

#### The following varieties of Apples

are good sellers and good keepers:

Stayman's Winesap Winter Banana  
Arkansas Black Black Ben  
Jonathan King David Delicious  
Rome Beauty Mammoth Black Twig

#### Plums

Few plums are grown in the East, so that California Plums find a ready market. The Plum is easily grown in all parts of the state, and will do well in a wider range of soil and climatic conditions than almost any other fruit. Failure of crop is almost unknown.

#### Notice:

Our stock of deciduous and citrus trees is very large, and, of course, cannot be covered in a single advertisement. Our stock comprises fruit and nut bearing trees, ornamentals, berries, shrubs, vines and roses.

## Old But Always New

Since Henry Weber began to build his good wagons more than seventy years ago, the Weber wagons that today go out all over this land under the International Harvester warranty have become a farm necessity.

Yet Weber wagons are not the same now as then. They are always new and better. Improvements are always being added, some of them patented, and therefore exclusive Weber features.

The famous International fifth wheel which distributes the strain on the front bolster and sand board steadies the bolster and prevents bending or breaking of circle iron and king bolt—the new folding end gate which is split proof, stays securely in position, and locks easily—the convenient center link end rods, the tool boxes, the binder rods, are some of these improvements.

Each of these features, designed to give greater strength and longer life, more convenience and better service, makes Weber wagons better now than ever before. Buy your next wagon from a dealer who sells the Weber.

## High Cost of Gardening

Written for California Cultivator By Ernest Branton

**E**XPENSIVE gardening is not always the best or the most satisfying. It is not so much a question of garden as of gardener. It is his attitude that counts for most. He who grows plants best through personal care and culture gets the greatest benefit whether he grows plants each worth one cent or one dollar. If one gardens for pleasure he is most satisfied, reaps the most profit.

If catalogs reek and teem with high-priced novelties the garden owner may have to exercise a little self denial, but he may be consoled by the thought that others are experimenting with these plants, and if they be found really good they will soon be cheap enough for all. Only those grossly selfish covet those plants his neighbors cannot afford. Someone has to pay exorbitant prices for novelties or they prove slow or late, or even impossible of introduction. Such plants are not necessary to a beautiful garden, often not even desirable.

He who wishes an abundance of flowers at little cost must not seek the new or rare, and luckily there exists no such need. Seed stores and plant depots everywhere are filled with good standard stock of low cost. The chief reason nearly all plants of merit are low in price is because they are so desirable that everybody wants them and therefore all dealers handle them. From this one would assume that the best seeds and plants are of moderate cost, and such is really the case. They are most common because proven most desirable, and generally most easy of culture for a fair degree of success.

A large part of the success found in gardens rests upon the expenditure of intelligent care of soil and crops. But if one has to labor too much the pleasure is lessened and cost increased. It is therefore necessary to grow that class of plants that will prove permanent and productive with least change of position or condition. As we are prattling of flowers rather than of plants, it is highly pertinent to remark at this stage that herbaceous perennials have no superiors in this line. And it is not necessary to buy these for many may be grown from seeds, and the few difficult of home production may be purchased. Even these need be procured in but small quantities, for if properly handled they may by division soon become many. The best home gardens are owned by those most interested in plants and flowers, all other conditions being equally favorable to all considered. Make your garden beautiful and you will learn to love it.

### Heavy Soils

Temperature is not the only factor affecting the hardness of plants, at least not the prevailing atmospheric temperature. During winter many plants that are hardy in a light sandy soil will be found injured by cold in a heavy clay soil even though thermometers register the same temperature in both places. The chief source of trouble seems to be lack of drainage, for soil moisture does easily escape from heavy soils and may even lie about the crown of the plant and there freeze, a condition impossible in a well drained soil. In the worst of these soils, during a long, wet winter tender plants will rot away yet

pass the season unharmed on a light soil in the immediate neighborhood. If humus and sand could be mixed in heavy soils to a good depth, not only the trouble noted would be removed but the soil would thereby be rendered much more fertile by reason of availability.

### Petrified Forests

In several parts of Western America there are some remarkable examples of petrified forests, or trees turned to stone. Most notable are those of Arizona. Of similar material and formation is one at Calistoga, Napa County. In Elysian Park, Los Angeles, workmen have lately found some remarkable sections of preserved trees in stone, so true to nature that the grain of the wood, the finest markings in the bark, knots, broken stubs of branches, etc., all are as plain as in the living timber. As one of the park commissioners of Los Angeles it has been my privilege to handle and examine these sections closely, and I have a fine piece a foot long and six inches in diameter that is as natural in appearance as though taken but today from the trunks of a cypress. As perfectly preserved sections of Cupressus MacNabiana have been found in the now famous asphalt beds, I believe the petrified cypress may be the same species, though none now live closer to Los Angeles than Oregon.

### Natural Beauty.

The natural is beautiful, and in nothing is this fact accentuated more than in gardening. Do we need any proof of this beyond our own observation? Why is the ancient Greek statuary so noted if not for its fidelity to nature? Why does the noted and successful artist occasionally throw down his chisel or his brush in despair and not resume work until the "spirit" moves? It is because for the time he feels powerless to reproduce nature and has to leave the work until his tired nerves have had a rest from the great strain of what? Trying to produce something "original" or "distinctive"? Not at all! For those tasks are easy. The supreme problem is: to reproduce nature.

It is through failure to grasp this point that landscape designers and planters fail. Too many think no reputation can be gained until they shall produce something "strikingly original." As though such a thing were possible. Success is measured by the multitude according to the number of tongues set to wagging over their work, and they fail to distinguish notoriety from fame. The former generally springs from failure, if measured by the proper standard, but fame comes only from success. In nothing is this more true than in landscape design and garden building. To the layman of good taste a painting or a piece of sculpture may be seen to be good or bad at once, but with gardening his judgment is not so good, for it is too large and too far from his grasp, being a higher and finer art than painting or sculpture and one that time alone can finish. For in gardening only the eye of a fellow artist can see the beauty and finish and sufficiency, or the vision, of the yet-to-be. Seldom does the well-planned and well-planted garden appear sufficient to any but the far-sighted artist who designed it.

## Resumption of French Sugar Production

By Commercial Attache C. W. A. Veditz, Paris, in Sugar

**I**N VIEW of the high price and the shortage of sugar in France, which necessitated the issuance of sugar cards some six months ago, considerable interest attaches to the fact that in the French territory recently evacuated by the enemy there are more than 40 sugar manufactories, not including those which, although no longer in territory held by the enemy, are too near the army front to make their operation possible. A recent semiofficial report covers conditions discovered in 37 establishments,

of which two were in the Oise Department, seven in the Aisne; six in the Pas-de-Calais, and 22 in the Somme.

The repair and the resumption of productive operations in these works is, of course, tied up with the question of the possibility of cultivating the soil in the vicinity and of raising a sufficient crop of sugar beets to provide the necessary material for making sugar. It was therefore necessary to consider both the agricultural and the industrial point of view in studying the question of renewed sugar production in these regions.

**Conditions Near Soissons**

In the zone between Soissons and the neighborhood of Nesles-Athies the sugar factories were found to be relatively little damaged, requiring but slight repairs, and therefore readily able to resume operations. The soil, moreover, was generally fit for cultivation, and at several points farm tractors and agricultural machinery furnished by the Ministry of Agriculture were at work. But the residence of the population had suffered great damage; many houses had damaged roofs and walls and others were largely destroyed by the fire. Frequently doors, windows, flooring, and furniture were lacking or completely destroyed.

The agricultural machinery and tools previously in use were, whenever any remained, damaged and out of repair. In the court-yard of the sugar works at Athies (Somme) the investigators found a collection of plows, mowers, thrashers, etc., which had previously served for farming in the immediate neighborhood and which had apparently been brought there by the Germans for repair. As in most of the industrial establishments in the recovered area, the Germans had removed from the sugar works all machinery of copper and bronze. They carried off parts of steam engines, the copper parts of evaporating vats, of cooking reservoirs, electrical machinery, and dynamos. They also removed most of the machine tools in the repair shops—lathes, planing machines, etc. As a rule, moreover, the chimneys had been mined, and in falling had demolished part of the plants.

**Great Devastation in Arras-Peronne Section.**

The region comprising Arras, Bapaume, Albert, Foucaucourt, and Peronne is the most completely devastated. Fields and farms are cut up by trenches, shell explosions and mines, and covered with zig-zag lines of barbed-wire fences and obstructions. On the hillsides are numerous subterranean shelters dug by the enemy. In many of the fields the lower strata of the soil have been brought to the top, and the upper arable layers are often invisible. Throughout large areas the trees that bordered the roads and surrounded the houses have been cut down by the enemy. Others are shattered or burned, leaving only charred, broken trunks. The enemy also exploded mines at the more important road crossings, leaving funnel-like holes 60 to 80 feet in diameter and 20 to 30 feet deep. Most of these holes, however, were promptly filled with bricks and stones.

In this region entire villages have been so completely destroyed that their sites are almost indeterminate—among them Estrees-Damecourt, Saily, Le Sars, and Coucellette. In other villages (Villers-Carbonel, Briesur-Somme) of the houses there remain only parts of the walls, with partly unsupported roofs. Next to nothing is left of Peronne, Chauny, Bapaume, and other towns that have figured in the official communiques. To level and clean up the soil in these regions will alone require considerable labor, and unexploded shells and grenades make this task precarious. Many of the industrial establishments are totally destroyed, and in the others all copper and bronze and all machine tools have been removed by the enemy.

**Conditions Better North of Arras**

In the region west and northwest of Arras the fields have suffered less damage and can be cultivated within a short time. The factories at Bihucourt and Dainville can be restored and repaired. Some of the others have been destroyed by mines. Twelve sugar manufactories are reported as admitting readily of sufficient repairs to make their operation possible within a relatively short time. Even here, however, considerable work must be done before the neighboring farms can again be cultivated.

Pending the reconstruction of homes, temporary shelters will be required for both the farming laborers and the industrial employees. As draft animals will be scarce the use of tractors will be necessary on as large a scale as possible. The work of sorting and classifying such machinery, tools and building material as can still be used will be undertaken promptly and it is believed will facili-

tate the resumption of productive operation, although of course it will be necessary to obtain elsewhere in France, or from abroad, much of the manufacturing equipment indispensable for the normal operation of the sugar manufactories, as of other industrial plants, in these regions.

**CONDITION OF TRUCK CROPS IN CALIFORNIA**

By R. G. Risser, Bureau of Crop Estimates

The condition of truck crops, December 8, is as follows: Artichokes 87 per cent, cabbage 85 per cent, carrots 90 per cent, cauliflower 72 per cent, celery 80 per cent, lettuce 78 per cent, onions 86 per cent, peas 87 per cent, strawberries 90 per cent, tomatoes 92 per cent.

Forty five hundred acres cabbage Los Angeles, Orange and San Diego

Counties affected by dry weather. A few early cars shipping next week. Heavy movement March and April. Fifteen hundred acres carrots Los Angeles County producing well.

Five thousand acres cauliflower Los Angeles County badly in need of rain or heavy fogs. Big acreage offset by unfavorable conditions. Heavy shipments will follow change of weather and continue through winter. Fifty and fifty-five cents per dozen paid to growers.

Five thousand and five hundred acres celery not materially injured by recent frosts. Thirty-five cars rolling per day, 20 per cent of the crop shipped. Big movements expected in December and January. Continuance of wilting winds may temporarily check shipments.

Thirty-six hundred acres lettuce Los Angeles County all stages of growth. Shipments brisk but quality and firm-

ness of heads reduced by weather conditions. Growers paid ninety-five cents to dollar fifteen per crate.

Twenty-five acres lettuce Imperial County, growing rapidly. First car December tenth seven weeks earlier than last year. Early plantings soft and making seed stalks due to warm weather. Eighty per cent stand. Big movement January and February, 250 per cent increase over last year.

Fifteen hundred acres peas Imperial County growing well.

Eight hundred acres tomatoes Imperial County up and protected. Weather favorable.

General prospects for thirty per cent increase in shipments of winter and spring vegetables.

Weather continues warm and clear with drying winds last of week. Car shortage not acute this week. Acreage figures subject to revision.

# And Now He Cultivates With Dynamite

The man who was wise enough to plant his orchard with the aid of Hercules Dynamite is also wise enough to keep it in proper shape by cultivation of the soil around the roots of the trees. He enlists the help of Hercules Dynamite in this work too.

In the Fall of the year he blasts holes between the rows of trees, at the ends of the roots, shaking and loosening the soil, and giving the roots new food and softer earth through which to grow.

## HERCULES DYNAMITE

you see, not only helps to start an orchard right but also helps to keep it right.

The man who plants an orchard with Hercules and then cultivates with Hercules will obtain full crops of splendid, healthy fruit—fruit that can be sold at the highest prices. And because his trees are in good condition he will obtain such crops year after year.

If Hercules Dynamite is not already working for you put it on the job at once. As a first step fill out and mail the coupon below. You will receive by return mail a copy of "Progressive Cultivation," a 64 page book which tells of many ways in which dynamite may be used to advantage in the orchard and on the farm.

## OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertiser in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscriber must have mentioned the Cultivator when writing the advertiser.

## THIS WEEK'S COVER

Cedrus deodara, one of the most striking—and the most beautiful—tree on earth, especially in the springtime when the silky and silvery tassels are reflecting the light from every angle. A hardy tree, if planted on the mountains and neglected it still clings to life and responds quickly when given better treatment. A native of the Himalayas, it has taken to California conditions with as much satisfaction as the eucalyptus from Australia. The tree does not do well in northern and eastern states.

The avenue shown on the cover is, so far as we know, the longest and finest of any planted to this tree, and the Cultivator camera has been used to bring to our readers a few of these wonderful trees. We are not certain, but we believe these trees were secured from the old-time nurseries of John Rock, now the California Nursery Company.

Increase the beauty of the California landscape by planting some of these cedars. They do not look well on a narrow street, but where conditions are right nothing can be planted which will add more to California's beauty.

## MERRY CHRISTMAS

In this season of peace on earth and good will to men the true pacifist is becoming more and more militant, for he realizes that true and lasting peace comes only when it is a just peace. We believe it is coming and hope it will be soon. There are many hopeful signs to make this Christmas season a bit cheerier. While we are all saving and all answering the many demands, let us keep sweet and be as cheerful as possible.

A Merry Christmas to every reader of the Cultivator.

## RED CROSS

This is Red Cross week. We hope every subscriber of the Cultivator will be a member of this great organization. An effort is being made in the hope that more than 467,000 new members may be secured in this state and in Arizona and Nevada. The minimum number of members desired in the United States is 15,000,000.

## WAR SAVINGS STAMPS

The drive is on for \$2,000,000,000 in gold to aid in the war, this to be supplied in part by the pennies, nickels and dimes in the toy banks of the boys and girls of the United States. There is an excellent probability that the boys and girls will answer as promptly as did their elders in the liberty loan drive.

## INCOME TAX

As noted in another column, internal revenue collectors will visit different communities as soon as possible and aid in giving information as to the making of returns to the revenue office. These returns are more or less complicated, and as thousands of people who have never before paid an income tax will now be called upon to do so, everyone must inform himself, for, bear in mind, ignorance will be no excuse for the making of improper returns. We have found officers of the department anxious to be of service and give information. Meantime those who are too far away to consult the revenue officer should use the Cultivator or any other source of information. Write of your problems.

## SUGAR!

District Attorney Woolwine of Los Angeles and a number of sugar beet growers are in Washington hoping to secure justice to the sugar beet growers and to have them put in a position where they can aid in the production of more sugar, but so far as a getting together of the growers and manufacturers is concerned there is no more prospect of that than at the adjournment of the meeting described in the last Cultivator. There have been several stories started that the entire matter was settled, but the growers are generally refraining from signing up, and some have already planted other crops. The situation is certainly most unfortunate, and while there is yet time for a getting together of the two factions, there should be swift work.

Meantime the waitress at the restaurant says: "One or two lumps please?"

## NEW CHIEF

Alonzo D. Melvin, for many years at the head of the bureau of animal industry of the United States department of agriculture, died at his home in Washington early this month. Dr. Melvin has built up a great organization in this bureau and has advanced the live stock industry. He will be succeeded by Dr. John Robbins Mohler. There are more than 5000 employees engaged in the work of this bureau. These men are located in every state, and in almost every county, of the Union and have been given special powers since this country entered the war. Inspectors of meat and meat products are under the direction of this bureau.

Dr. Mohler, the bureau's new head, is a native of Philadelphia and has been connected with the department

since 1897. He has worked up from a field inspectorship until he became in 1902 assistant chief.

## HIGHER RATE

"Safety First" is the slogan of the farm loan bureau, and with all interest rates increasing the only way to secure safety for investors in bonds of the farm loan banks was to add one-half of one per cent to the interest rate. Loans so far as actually made have borne the five per cent rate. It will now be five and a half, which is still far under the commercial rate paid by farmers. Ultimately when the absolute solvency and security of the farm loan bank has been established in the minds of investors it is to be presumed that the rate will be materially lowered. It is possible it may go as low as four per cent, but probably it will be long before this can be brought about.

## WHY NOT

A subscriber of the Cultivator has suggested that we have in our larger cities, at least in San Francisco and Los Angeles, an agricultural club, this not necessarily of the type of the ordinary farmers club, but one having to do with the larger questions of agriculture and working much along the lines of the present City Club, Municipal League, and other similar organizations which have to do with the uplift of civic life. It might have permanent headquarters or it might have weekly gatherings at luncheon or dinner tables. All cities have a large number of those who are interested in agriculture, many of them directors in agricultural concerns. This is true in California to a far greater extent than in any other section. From toy shop owner to banker, business men usually feel that they are not fully equipped unless they have a place in the country. It is too often true that these places are not as great a factor in food production as they should be, but this is not so widely true as it was formerly.

Why may not these people meet and discuss their problems?

## RAIN

"What rain?" is the question. It is the rain that has not come yet that we are discussing. Everybody is talking about it, and, like the question as to when the war will end, everybody's opinion is perfectly worthless. It is going to rain, and we believe a-plenty, which, as noted above, is an opinion entirely worthless.

Live stock men are seriously concerned. Worse, they are feeding valuable concentrates and high priced hay. At best it will be weeks before pasture or new crop will be of any use. The only suggestion which can be given is that everything be done to take advantage of the downpour when it does come. May it be soon.

Appeal comes for still greater production of food. Last month this one state shipped East over 55,000 tons of food. Other months the demand will be as great. We must trust to the weather and to labor. There's the rub. But councils of defense and committees are at work. With the results of their efforts and labor saving implements we must succeed.

"Diligence is the mother of good luck."

There are 4,200,000 automobiles in service in the United States and approximately 1,750,000 of these are owned by farmers. The auto is no longer "a pleasure car" exclusively.

## This Week's War News

The proposition to establish a free market at Camp Kearney has been abandoned.

Roumanian forces have practically ceased all activity. Future action may be controlled by conditions in Russia.

General Allenby is still holding Jerusalem and has advanced his forces far to the north and east of the city.

The sinking by the Germans of a number of Norwegian vessels in the North Sea has angered more than ever the people of that country.

The governor's mansion at Sacramento was dynamited on Monday night; part of the rear of the house was blown off, but no one injured.

The senate military committee is asking pungent questions as to why department red tape is not cut and more munitions supplied to the American army.

The fake story that the Y. W. C. A. was to promote and support a dance hall in Camp Lewis has been denied and shown to have been promulgated by enemies of the country.

There has been great activity in northern Italy, and while the Huns have made slight gains it has been at fearful cost. French and English artillery and infantry are aiding the Italians.

The first American vessel to go down under U-boat attack was the torpedo boat destroyer, Jacob Jones. Over 50 men were killed by the explosion of the torpedo. Only a small portion of the crew were saved.

A bill has been introduced into congress taxing congressmen's own salaries in excess of \$6000. This under the excess profits tax section of the law. Apparently the congressmen consider themselves still in a separate class.

It is rumored that the aid given by Germany to the Austrians in driving the Italians from Austrian soil has stopped much of Austria's peace talk. On the other hand, German laboring classes are circulating pamphlets "Done with the War. Down with the Kaiser."

New "offer" of peace is anticipated from the kaiser at Christmas time. This probably for home consumption purposes. He will recommend that the whole matter be referred to a commission or to any body until he and the Prussians can have time to recuperate. The Allies will answer "Unconditional surrender."

There has been constant and terrific bombardment in eastern France, and expectation of greater activity on the part of the Teutons. It is now thought that this threatened activity may be to induce the Allies to withdraw forces from Italy. Such attacks as the Teutons have made have been defeated by the barrage of the Allies' artillery. The feeling prevails that when attack is made it will be at its fiercest in the sector held by the American forces.

Russia and the Central Powers have signed their armistice. So far as known its provisions are most humiliating, and probably will mean great losses to the Russians. The German propaganda with the Bolsheviks seems to be supreme. Unless there is another revolution it is probable the armistice will lead to permanent peace and release of 2,000,000 German prisoners. The Germans, however, will retain Russian prisoners and say to them "Wait until the termination of the war."

# Agricultural News Notes of the Pacific Coast

## Northern California

Napa County is installing extensive drainage systems.

There will be quite general planting of chestnuts in Butte County.

Oroville reports its crop of Navel oranges as 25 per cent of normal.

Mendocino County is now assured that it will soon have a farm adviser.

Growers of hops are discussing pooling their interests and holding for 50 cents.

Reports from New York show California grapes in drums bringing long prices.

Auburn, Placer County, is shipping out a greater number of olives than any preceding year.

Apple packers from Medford, Oregon, have been brought to the orange packing houses of Butte County.

The Surprise Valley irrigation district of Modoc County means many thousand acres more of food crop.

All phases of bean culture were discussed at a bean convention held recently at University Farm, Davis.

The Glenn County Fair Association has elected directors for the coming year. Date for next fair not yet set.

Colusa and Butte County warehouses have been filled with rice, and Sutter warehouses are now taking some of the surplus.

Professor Flossfeder recently gave instructions to vine growers of Butte County, touching upon methods of growing, pruning, etc.

Hindus who cleaned up a small fortune on Butte County rice fields last year are now headed for India where they will be "some capitalists."

Butte County says that her "substantially colored" oranges are now even better color than the law demands. The packing season is now in full swing.

The California Tractor and Implement Association voted to hold a great tractor demonstration at the University Farm, Davis, four days preceding the annual 1918 picnic.

The Humboldt County Dairymen's Association met recently in Ferndale, made nominations for officers for the coming year and appointed a committee to prepare for an annual banquet to be held in January.

Sacramento Valley farmers are planning to attend a public hearing conducted by the department of agriculture in San Francisco, December 15. The meeting is to determine as to federal standards for shelled corn and various wheats.

The state railroad commission has authorized the Grangers Business Association, which has a number of warehouse along the Sacramento River, to raise storage rates. Prices now are, for 30 days or less, 50 cents per ton; 60 days or fraction, 75 cents; over 60 days and up to May 31, \$1.00.

The Yolo County farm bureau recently discussed the matter of Chinese labor. It appeared that farmers were practically unanimous in a wish to have Chinese labor introduced but took no definite action until the wish of the federal government should be learned. The first point with the Yolo farmers was patriotism. Incidentally a discussion showed practically unanimous opinion as to the advisability of closing saloons in order to secure more efficient help.

## Central California

Stanislaus County produced in excess of 300,000 sacks of beans.

Rice growers of Kern County are erecting a rice mill at Wasco.

Tulare County reports the major port of its Navel crop already shipped.

Fig growers recently met at Ceres and discussed growing and marketing problems.

The State Automobile Association is conducting a campaign for 5,000 new members.

Cattlemen of Tulare County state that cattle on the hill ranges are suffering for feed.

Sanislaus County employment bureau reports labor a plenty for this period of the year.

A \$30,000 olive packing plant is completed at Lindsay and has begun work on this season's pack.

Dairymen of Riverdale, Fresno County, have formed a cow testing association which began its test December 15.

"125,000 acres by February 1", under the new contract is the slogan of the California Associated Raisin Company and thousands of raisin growers.

Tulare County hog producers have been auctioning cars of fat stock, receiving pay according to dressing test as reported from the packing house.

Two irrigation districts of the Lindsay-Strathmore and Terra Bella districts in Tulare County are completing work which will bring 27,000 acres "under the ditch."

University hogs made an exhibition of themselves for the benefit of San Joaquin Valley swine breeders recently. Five hogs of the same age showed different methods of feeding.

In the discussion of growing beets in San Joaquin County recently a sugar beet grower asserted that as a rule beet growers are losing money at the prices which have prevailed.

At a mass meeting of dairymen in Fresno, resolutions were adopted pledging "ourselves to give hearty and earnest support and cooperation to the Associated Dairymen of California."

The Grange of the Patrons of Husbandry at Aromas, San Benito County, has elected officers for the coming year. This Grange has been especially active in the organization of farm centers.

The committee having charge of Raisin Day observation closed its year with several hundred dollars in the treasury. After New Years a new committee will be appointed to boost 1918 Raisin Day.

The Kern County farm bureau is contemplating the organization of a county mutual fire insurance concern. The success of other county insurance associations is proof of their advantage to the farmer.

The San Joaquin Valley Milk Producers' Association held an all day meeting at Fresno last Saturday. President Henderson of the Associated Dairymen of California and Market Director Weinstock were speakers.

At a recent meeting of bean growers of San Joaquin County to discuss the general situation in regard to beans a committee of three was appointed to take steps toward forming an association of bean growers for that county.

## Southern California

Vegetable growers of the South are appealing for a large dryer or dehydrator.

The Hemet Orange Growers' Association is planning to ship out a carload of Christmas oranges.

The Tournament of Roses at Pasadena New Years day promises to be the biggest and finest ever.

Citrus growers in all sections of Southern California report trees showing wonderfully thrifty growth.

The Covina Citrus Association disbursed over \$540,000 last year. Its average to growers was \$1.11 per box.

The Azusa Citrus Association shipped during the past year 150,000 boxes of oranges and returned about \$240,000.

Great fleets of kelp cutters are working off Southern California shore cutting kelp from which potash is secured.

The farm adviser of San Bernardino County recently gave a pruning demonstration to fruit growers of Chino and Ontario.

Many ice cream manufacturers advertise that they are using honey instead of sugar for the sweetening of their product.

Celery growers of Southern California recently held a meeting at El Monte and decided to organize a co-operative marketing association.

The Riverside Chamber of Commerce is planning for a meeting at Riverside which will discuss the advisability of a farm school in the south.

Citrus growers in all sections of Southern California recently held a meeting at El Monte and decided to organize a cooperative marketing association.

Imperial Valley farmers are elated at news from Washington that Secretary Lane has given to Imperial permission to take waters from Colorado River at Laguna Dam.

The board of trustees of Fullerton has passed an ordinance which makes it a misdemeanor to use milk bottles for canning fruit or any other purpose for which they were not intended.

The state board of horticultural examiners held an examination this week in Orange County for the purpose of qualifying candidates for the position of horticultural commissioner.

At the recent annual meeting of the Covina Orange Growers' Association A. R. Evans was chosen president; L. L. Ratekin, vice-president; H. M. Houser, treasurer; C. E. Crawford, secretary-manager.

Southern Pacific car shops of Los Angeles are now turning out nine freight cars every eight hours. These shops will complete in excess of \$5,847,000 worth of rolling stock within the next few weeks.

The contention between beet producer and sugar manufacturer is yet unsettled and the Los Angeles County district attorney and members of the growers' association are in Washington presenting the matter to Hoover.

A. J. Stalder of Rosamaines Ranch near Riverside is credited with being the first man to employ goats to tramp down his silage. Being short one man he borrowed three goats, which performed their task to the entire satisfaction of Mr. Stalder.

## The Coast and General

Baker, Oregon, is making heavy shipments of sheep.

The Idaho Rabbit and Pet Stock Association has been organized in Boise.

Fruit growers of Minnesota will meet in annual convention in St. Paul, January 1.

A federal specialist in cotton classification is now in Yuma, Arizona, to assist farmers.

The Hawaiians export to the United States, mostly in tropical fruits, \$6,000,000 worth of products.

The Ohio state corn show will be held at Columbus, January 28 to February 1. Corn, small grains and potatoes will be entered.

Americans conducting business enterprises in Mexico have formed the American Chamber of Commerce of Mexico in Mexico City.

The Oregon Dairymen's League has organized. Its aim is to start a dairyman's educational campaign and later take up marketing problems.

Nine thousand dollars worth of horses and mules have been gathered in the vicinity of Ashland, Oregon, for the use of the American army.

Two thousand boxes of apples for the soldiers will be placed on board trains carrying troops East, by fruit growers of Washington County, Idaho.

The United States food administration has made a ruling regarding salmon packers that the taking of unreasonable profits will not be permitted.

The American Automobile Association has resolved to withdraw all racing until the close of the war. The association is also encouraging enlistment of all qualified auto and truck drivers.

The Washington State Dairymen's Association met at Sequim, Clallam County, December 13 and 14. Creamerymen, dairymen and inspectors of the state also met at Sequim at the same time.

The report persists in the daily press that President Wilson will bring before the present session of congress the proposition to take over the running of the railroads of the country for the period of the war.

An absolute embargo on shipments of corn and oats into eastern territory was made effective on Saturday, December 8. The main purpose of the embargo is to give opportunity to move soft corn to the markets as rapidly as possible.

All exemptions granted under the first draft rulings are revoked. Beginning the 15th all men of draft age were placed under new classifications, given on Page 619 of last issue. The privilege of enlisting also has ended for all men who have been drafted.

Evaporators of Payette, Idaho, are running night and day shifts in an endeavor to handle all the apples that are pouring in on them, and it is reported that all barns and warehouses are overflowing with apples waiting shipment when the transportation situation clears.

Owing to early frosts, also to the late planting in some sections, the corn crop for the past season shows a large percentage of soft corn and the food administration is appealing to the farmers to use great care in securing hard and fully ripened seed for next season's planting.

## MORE WORK FROM YOUR HORSES

Heavy spring work takes the surplus flesh from the horse. His collar no longer fits. His neck and shoulders chafe and gall. He can't do his full share of work and you lose money. Prevent these evils by using TAPATCO Pads.

### A NEW AND BETTER HOOK ATTACHMENT

Consisting of wire staple, reinforced with felt washer (note where arrows point). This gives the hook a better hold and prevents pulling off. The weakest point is made strong and life of pad greatly lengthened.

Found Only on Pads Made by Us.  
Look For The Felt Washer.

SOLD BY DEALERS EVERYWHERE

The American Pad & Textile Company  
GREENFIELD, OHIO

Canadian Branch: Chatham, Ontario.

Pat. In U. S. Dec. 1, 1914.  
Pat. In Can. Apr. 6, 1915.

## Our Spring Pigs Are Mighty Good Buys

We have for sale a limited number of specially selected spring pigs, sired by Mayhews Leader 6th, a son of the \$3000 Grand Champion of the World, Grand Leader 2nd.

These pigs are well developed and are excellent value at their prices. All are cholera immune. The guarantee of Anchorage Farm is behind every pig.

Write today for full information to

ANCHORAGE FARM  
ORLAND, CALIFORNIA

Home of STAR LEADER,  
Premier Berkshire Boar of the  
Pacific Coast.

## Santa Anita Rancho

Anoakia Breeding Farm

**ARABIAN THOROUGHBREDS:** Two-year-olds, sired by Imported Stallion the are the choicest thoroughbred mares on Santa Anita Rancho.

**SADDLE HORSES:** Some of which were sired by Ibn Mahruss, world renowned imported desert saddle stallion, and Don Castano, a five-gaited Kentucky saddle stallion. These horses are mostly three-year-olds.

**POLAND-CHINA AND BERKSHIRE BOARS:** Four to nine months old. Sired by famous Poland-China herd boars, Banker's Boy and Glenview Wonder. And Berkshire boars, Kintyre Laird, Grandson's Duke and Fashion's Longfellow 5th. The dams are from the best blood lines. Most all these animals have winnings at World's Fair. Write for catalogue.

**HOLSTEINS:** We will sell a number of young bulls. Some sons and grandsons of the noted State Record Cows. Write for details.

Correspondence Invited

Anita M. Baldwin

W. H. TAYLOR, Superintendent

Santa Anita, Cal.

Lady Beatrice

Senior and Grand Champion cow at the 1917 California State Fair and a big winner in the English show yards. Record 8538 pounds.

## INNISFAIL MILKING SHORTHORNS

Our herd consists of animals from the leading herds of England and the United States. All milk records from females are official. Average records 8000 pounds and over. Young bulls for sale suitable either for dairy or beef herds.

Alexander & Kellogg

Farm on Grisy Island SUISUN, CALIFORNIA

## SERVICE TO THE BUYER TO THE SELLER

Economy of time, effort, and money is only one of the many services our organization is delivering to both sellers and buyers of registered livestock in public auctions. If you want to consign cattle for public sale, or disperse your herd to best advantage, write us about it.

California Breeders' Sales and Pedigree Co.  
C. L. HUGHES, Sales Mgr. SACRAMENTO, CAL.

To keep thoroughly posted subscribers should read every advertisement in the California Cultivator columns.

## Who's Who

With the issue of August 11 the Cultivator started its series of "Who's Who" articles to bring before its readers some of the livestock producers of California who are responsible for the large development of the industry. Where did they come from and how long have they been engaged in California development, also how do they look, so pencil and camera are to be used, and some homely, everyday photographs and notes regarding them will bring us closer together. Bear in mind we say "homely photographs" and not photographs of homely people. The idea we wish to convey is that so far as possible we will secure photographs in everyday surroundings at the homes of the livestock producers.

Written for California Cultivator By F. F. Stonerod

W. J. HIGDON

TULARE County stands fourth in dairy production in the state. She probably stands first in the advancement of the cooperative idea. W. J. Higdon of Tulare is one of the prominent figures in the county who has done as much or more than any other one man to write Tulare in red letters. He was one of the organizers of the Dairymen's Cooperative Association, a concern which has always received a premium of five cents per pound for butterfat over Los Angeles quotations. This association has paid

lare. He went East and selected the herd, but before it was loaded aboard the cars for shipment the quarantine was clamped down, and it was many months before he was able to get his cattle to California. Meanwhile he became interested in Holsteins and while waiting for his Guernseys to arrive he got busy and bought a herd of the White and Blacks. He went right into the herd of a noted Washington breeder and selected a bunch of his best heifers bred to a son of a world's record cow. Then he picked up a few more good ones at the large sales and bought a few at private sale. One of his best investments was the great young son of Prince Gelsche Walker, Prince Riverside Walker.

W. J. Higdon

dividends to the stockholders from its inception, and its success is as much due to its secretary, W. J. Higdon, as it is to the cooperation of the individual members.

Mr. Higdon is a native Californian and although not born in Tulare County he has been living there for many years. He got into the pure bred live stock business on a large scale about three years ago. Always an admirer of the Guernsey he decided to purchase a high class herd and put them on his fine ranch on the edge of Tu-

## Field Notes from the Live Stock Men

A. A. Jenkins, Tulare County, reports the sale of a young bull sired by Gertie's Son's Victor out of an R. of M. dam, to Chris G. Straszacker of Tipton; also a son of Gertie's Lad to C. J. Dillon of Hanford.

F. F. Stonerod, who has visited the stock men in all sections of California during the past months for the Cultivator, has joined the 144th F. A. of the California Grizzlies Battery and is now in Camp Kearney. His battery will presumably soon be "somewhere in France" supporting the rest of the liberty army boys. This will explain why the little Ford runabout with Mr. Stonerod will not be visiting, for sometime to come, amongst our livestock friends.

R. H. Whitten owner of the Whitten Ranch, has just purchased from E. D. Frazier of Missouri, his famous herd boar, Jumbo Bob. This boar was sired by the 1106 pound Long Jumbo, and his dam was a 900 pound sow by the 1100 pound Big Bob. Jumbo Bob weighed 900 pounds as a two-year-old, has 1 1/2 inch bone. He has sired several gilts that have sold for over \$500 each, and at Frazier's last two sales open gilts sired by him brought up to \$250 and five sows bred to him averaged \$252. He is probably the greatest breeding boar that ever left the Corn Belt. He already has several sons and daughters in California, one of his best sons being a sire in the herd of W. Bernstein.

Guy H. Miller, proprietor of Venadera herd, reports the recent purchase of a fine bull calf from Meridale Farms of New York, the home of the great Meridale Jerseys. The calf is sired

by their promising young sire, the Jap's Owl, a son of Spermfild Owl's Eva and the Imported Jap. Spermfild Owl's Eva has a yearly register of merit test of 993 pounds of fat, 1168 pounds of butter 85 per cent fat. This is the second highest test of the breed, and the highest test ever made by a cow of any breed that was milked but twice daily while on test. The dam of the calf is Spermfild Perfection, a daughter of Spermfild Owl 2nd, sire of nine heifers in Register of Merit with first calves. Spermfild Perfection is now on yearly test as a junior three year old, and in the first 111 days had made 200 pounds of butter fat. It will be noted that this bull calf is strong in the blood of the great Spermfild Owl, sire of 48 cows in the Register of Merit, two with tests of over 900 pounds of butterfat and 28 with tests of over 500 pounds of butter fat in a year. Spermfild Owl is considered by many breeders the greatest sire of the Jersey breed. This calf is a big strong youngster of good conformation and I expect him to make a valued sire in Venadera herd.

The extension specialist in dairying of the New Jersey State Agricultural College gives five precautions that should be followed in washing utensils: 1. Rinse all receptacles thoroughly in luke-warm water. 2. Wash them with a good soap or alkali in water as hot as the hand will bear. 3. Rinse in hot water. 4. Sterilize with steam. 5. Expose to the bright sunlight for two or three hours.

Killing cattle ticks is cheaper than feeding them.

## Holstein Breeders Sale

Written for California Cultivator By C. L. Hughes

HE promised Holstein history was made at Sacramento on December 5 when 72 splendid registered Holsteins went under the auctioneer's hammer for a total of \$68,930, an average of \$957 per head. This is the third highest average for any Holstein sale ever held, and is the highest average ever obtained in the world where the top animal sold for less than \$7000.

The sale abounded in features, for when prospective buyers began to drop in at the sale grounds, December 4, they found a string of cattle that more than fulfilled the printed claims made for them, and the real importance of next day's event began to be realized.

Prominent breeders from as far north as Washington were present, and E. Susaeta of Chile was on hand to secure a few good ones for the large South American interests which he represents.

Sale morning dawned crisp and sunny, and by 10 o'clock probably the largest assemblage that ever attended a Holstein sale in California was on hand. Lots had previously been drawn to determine the order in which the animals were to appear in the sale, and first position fell to an outstanding three year old, West View Pearlre Alcartra, consigned by McAlister & Son, Chino. Even her outstanding excellence did not succeed in warming things up on the first animal sold, and she went to H. E. Vogel of Fresno for the very much below her value price of \$500. From here on bidding was lively throughout the entire sale which went on during the day and well up to midnight before the last animal was sold.

Every breeder who consigned to this sale is entitled to the highest praise for permitting the selection of such cattle from his herd, a fact that was emphasized in the advertising of the sale, the truth of which is better realized now that the sale is over, and space will permit the mention of only a few of the outstanding features of the sale.

The big sensation was of course King Korndyke Pontiac 20th, consigned by Santa Anita Rancho and finally secured by W. J. Higdon of Tulare for \$6500, after a bidding duel with R. F. Guerin of Visalia. This bull fits in splendidly with the herd of great females that Mr. Higdon has collected and rounds out a herd that is bound to be heard from one of these days, not overlooking the good influence upon it of the new herdsman, Harry L. Redd, who made a lot of friends during his first appearance at a California Holstein event.

A feature around which a great deal of speculation had centered was the appearance in the sale ring of McAlister's "leading lady," Korndyke Sadie Vale Star-Rena. She proved to be aptly nicknamed for she topped the females of the sale when after spirited bidding she went to Fred W. Kiesel at \$3100. Mr. Kiesel figured prominently in the bidding on top stuff throughout the sale and was fortunate enough to secure seven of the very good ones. Besides that his herd came into prominence when the \$6500 bull was sold, for he is sired by the Kiesel herd sire, King Korndyke Pontiac, and again when a yearling daughter of Prince Gelsche Walker Korndyke, the other Kiesel herd sire, sold for \$1200, one of the prominent individuals and prices of the sale.

One of the bright spots in the sale was the beautiful little heifer calf, Lady Vale Joe Karlay, which Gotshall & Magruder called "the heart of our herd." She found favor all around the sale ring, but John W. Benoit of Modesto was there to take her home, which he did on his bid of \$1400. Benoit was a keen bidder on a number of the tops and succeeded in getting the last bid on three of them.

Toyon Farm Association secured one of the real bargains of the sale when they made the last bid of \$1950 on the great 31 pound cow, Woodcroft Ybma Pietje, from the McAlister consignment, and also secured the great 32 pound cow, Jennie Terzool Hicks 4th and her yearling daughter.

J. D. Patterson bought one of the very promising heifers of the sale when his bid of an even \$1200 took

the yearling heifer, May Walker Gelsche Korndyke.

After the catalog was published Alex Whaley made a record of 32.19 pounds butter in seven days on his great cow, Winifred Hotaling 3d, and she went into good hands when W. J. Higdon took her home at \$1750. Harry Redd, under whose care the 32 pound record was made in her first seven days on test, says she is a 35 pound or better cow, and he will now have an opportunity to develop her.

E. D. Barry, Jr. wanted only a few but required some of the best and showed rare judgment in his selections. He secured a great daughter of King Mead of Riverside and took the only two daughters of Prince Gelsche Walker in the sale, keen bidding taking them up to \$1400 each at which price Barry secured them both.

Geo. A. Cressey, the Modesto banker, continued his good selection of young stock and took home two splendid heifers.

H. E. Cornwell and A. M. Bibens of Modesto figured prominently in the bidding and secured three head of top females.

H. M. Cross of Merced secured one choice heifer and a young bull that was unquestionably one of the big bargains of the sale. This young fellow, King Morco Alcartra 2nd, is sired by King Morco Alcartra and out of Miss Gelsche Walker Korndyke, 23.17 pounds butter in seven days at 28 months of age and rated one of the very best daughters of Prince Gelsche Walker.

H. A. De Wolf of Ripon succeeded in getting the last bid on several choice ones to add to the herd he is establishing.

Post-Card Ranch, Corcoran, found a soft place in the sale and took home a great young bull in King Pontiac Pietertje Ormsby, at a price that looked far below his worth.

A. B. and B. G. Comfort of Guernsey were fortunate in securing the beautiful young bull, King Riverside Mead, whose breeding will do much toward advancing the quality of the Comfort herd.

Otto McClure was on hand and got into action when he and John Benoit joined in placing the last bid of \$1225 on a daughter of the \$50,000 bull, King Segis Pontiac Alcartra, out of a 31 pound dam. This great heifer was in the Bridgford consignment.

Alex Whaley was out after some good ones and secured a few after trying for many. He succeeded in getting a daughter of the \$50,000 bull from the Bridgford consignment for \$1175 and came in for one of the bargains of the sale when he secured the McAlister heifer, Queen Beauty Juliana, for \$725.

Of the various consignments nothing need be said. The result of the sale tells the story of how well the breeders presented their best cattle in a sale in which not a single cull appeared.

Col. Ben A. Rhoades was the auctioneer on the block and never before was his splendid salesmanship better displayed than in this sale. Col. J. E. Mack of Fort Atkinson, Wisconsin, was the auctioneer in the ring and won a host of friends at the ringside by his gentlemanly and effective work. C. L. Hughes acted as pedigree man in the box.

Following is a complete list of animals sold with prices and names of buyers:

Consigned by McAlister & Son

Females: Korndyke Sadie Vale Star-Rena, \$3100, Fred W. Kiesel; Woodcroft Ybma Pietje, \$1950, Toyon Farm Association; Ybma Pietje De Kol Mead, \$825, A. W. Morris & Sons; Abbeker Korndyke Segis, \$1400, A. W. Morris & Sons, K. S. P. Golden Queen, \$800, Bridgford Company; West View Pearlre Alcartra, \$500, H. E. Vogel; Queen Beauty Juliana, \$725, Alex Whaley.

Females: Miss Korndyke Mercedes, \$1050, McAlister & Son; Lady Mercedes Netherland Walker, \$920, H. E. Cornwell; Rag Apple Alcartra, \$1175, Alex Whaley; Fairmont Echo Alcartra, \$1225, J. W. Benoit, and E. O. McClure; Oakvale Jennie Korndyke, \$525, Fred W. Kiesel;

## CUTTER'S BLACKLEG PILLS

"California's Favorite" for nearly 20 years

For the Prevention of Blackleg in calves and young cattle

Their superiority is due to nearly 20 years of specializing in "Vaccines and Scrums only."

Year in and Year Out they give better satisfaction than any other vaccine made, and the cost of a few cents per dose is cheap insurance against a disease that always takes the fattest and best.

Single Pills may be used for ordinary and range stock.

Double Pills should be used for pure bred and high grade stock.

Use any Injector, but Cutter's simplest and strongest,

Prices:

10 dose pkg. Single pills \$1.00  
50 dose pkg. Single pills 4.00  
10 dose pkg. Double Pills 1.50  
50 dose pkg. Double Pills 6.00  
Cutter's Pill Injector.... 1.50

Insist on Cutter's. If unobtainable, order direct.

Write for new booklet, "The Control of Blackleg." It tells about Anti-Blackleg Serum which cures Blackleg and may be used simultaneously with vaccine to combat outbreaks and safely protect valuable stock.

The Cutter Laboratory, Berkeley, Calif.

When writing advertisers, mention the Cultivator.

## High Protein Tankage for Hogs

Nutritious Animal Foods must contain large percentage of either carbohydrates or proteins or both. Organic food contains both but in widely varying proportions. Carbohydrates give strength and animal heat. Proteins replace wasted tissues and promote growth. A "Balanced Ration" is a feed so proportioned as to contain these substances in proper relative quantities for the requirements of the animals to be fed. As feed for hogs all grains are deficient in growth producing proteins. One pound of WILSON'S HIGH PROTEIN TANKAGE to ten pounds of grain gives a well balanced ration, makes rapid and solid growth and when feeding to sows makes heavier, stronger pigs. Feed separate or mixed, wet or dry.

Feeding Booklet sent on request.

Female: Inka Tritomia De Kol Burke, H. M. Cross.

Total sale 72 head sold for \$68,930, average \$957.

Holstein Bull Nets \$1500 for the Red Cross

The welfare of the boys at the front was not forgotten by the Holstein breeders during the Guaranty Sale at Sacramento, for at the suggestion of James W. McAlister, Jr. of Chino, the consignors and the California Breeders' Sales and Pedigree Company joined in the purchase of a well bred young bull from Santa Anita Rancho. At the close of the sale, well along to ward midnight, 23 breeders and the sales company donated \$50 each to a fund for the Red Cross and drew lots for the ownership of the bull. The sales company drew the lucky number and immediately offered the bull to the highest bidder with the provision that the entire proceeds would be donated to the chapter of the Red Cross designated by the purchaser. Gion W. Gibson of Williams and I. G. Zumwalt of Colusa bought the bull jointly at their bid of \$300, and this sum added to the \$1200 previously donated made the neat total of \$1500, half of which went to the Williams chapter and half to the Colusa chapter of the Red Cross.

### Holstein Breeders' Banquet

A banquet and meeting of California Holstein-Friesian Association was held at Travelers Hotel, Sacramento, on the evening of December 4. Over 100 breeders and their guests, and the entire class in dairy husbandry at the University Farm, participated. The evening was made memorable by stirring

ring talks by Judge Peter J. Shields, J. M. Henderson, Jr., E. O. McCormick, H. H. Phillips, J. E. Mack, Prof. Edwin C. Voorhies, and Robert E. Jones. The meeting and banquet was voted a huge success, and President Fred W. Kiesel was commended from all sides for his excellent arrangement of the event and his happy manner as the presiding officer.

## Hogs Doing Their Bit

A Great Pork Producing Ranch near the Boundary Between Los Angeles and Ventura Counties. Hampshires and Durocs, all of High Degree, by the Hundreds.

CALIFORNIA has thousands of little picturesque nooks traversed by its magnificent system of highways which are proving wonderfully attractive to tourists and pleasure seekers. Better, many of these little valleys are showing their beauty by producing of the earth's best, giving food to our armies and the armies of our Allies. The wonder is, as we see how rich many of these sections are, that

pens are each supplied with comfortable quarters for the sows, and the comfort is added to by the shade of live oaks which dot the entire place.

The Janss Company, with Mr. Braley as superintendent, began some years ago to fit this ranch for producing some of the finest of pure bred swine. There are also some cattle on the place, but this is purely a commercial or beef proposition, with leaning toward the Whitefaces, or Herefords.

On the Conejo Ranch

Alleyway through the farrowing pens. Farrowing houses shown in background at margins.

they have so long escaped intensive culture.

None of California's highways traverses a more beautiful section than that from Los Angeles through Hollywood, the southern edge of the San Fernando Valley and down the Conejo grade into Ventura and toward Santa Barbara and the north. Many a little

Some months ago, desiring to give more attention to pure bred swine, the East was scoured to secure a thoroughly up-to-date hog man. In the Middle West they found Mr. Manley, whose life has been spent in the breeding of Duroc-Jerseys and Hampshires. These being the favorites with the Janss people, a contract was soon

Coming to Feed

Hundreds of fine Hampshires are being bred on this ranch.

farm and live stock ranch is placed in the little valleys where thousands of live and white oaks give abundant shade for stock.

One of the finest of these is the Conejo Ranch owned by the Janss Investment Company. This is some distance northwest of the old-time "town" of Calabasas. The town, by the way, consists of a school house and a couple of stores where ice cream and gasoline may be secured. The ranch is southeast of the old Conejo grade and is made up of rocky hill-sides and rich valleys. There are somewhere in excess of 5000 acres of land in the ranch.

It lies on both sides of the state road, the ranch house, garage, silos and some of the larger buildings on one side, while the hogs are mostly corralled on other. The maternity

closed, and Mr. Manley was soon in the field, selecting and breeding both Hampshires and Durocs.

That the selection and breeding were well done is shown by some of the winnings at the last state fair. There were winnings of blue ribbons, of championships and of grand championships. True, there are hundreds—yes, more than 1600 hogs on this one ranch to select from. This great number of pure breeds makes possible selection of prize winners. Every individual not of the "bluest" of blood and finest of lines goes to the market.

On the ranch there are: Hampshires, not the old-time bacon type but a bred-for-the-block type, which will make more pounds of pork from less feed; Durocs of some of the country's best strains. We believe the stock from the Conejo will prove to be long

winners at later state and other fairs. The Janss people are capable of pushing this great property to the limit with abundant capital and the work of Superintendent H. H. Braley and Manager J. B. Manley, the former Nebraska swine breeder.

REPORT OF DAIRY COMPETITION

Prof. F. W. Woll, in charge of the state dairy cow competition, reports the following average production of butterfat per cow for the month of November in herds entered in competition for the California Cultivator prizes:

November	No. Cows	Fat
Ambort	24	36.62

Coppini & Coppini	60	27.08
Darnell	2	19.30
Beebe	18	31.87
Iverson	37	44.21
Hansen	102	26.34
Tekelsen	53	29.69
Trigg	35	35.97
Coppini, J. W.	21	36.06

The cows in the herd of L. Hess were all dry during the past month, and those owned by F. J. Kell of Stockton have been sold to D. J. Sullivan of Stockton, from whom it has not been possible as yet to secure a statement of production. As the cow-testing associations to which both these herds belonged are without testers at the present time, it is very likely that they shall have to be considered out of the race.

Farm Butchering Saves Pork Costs

**H**OG Killin' on the farm, in spite of much encouragement given it in recent years, is not yet a general practice. The custom of buying meat from local stores or hucksters is increasing among farmers in spite of the fact that meat, especially pork, can be grown and cured at home for much less than the cost of purchased meat. The cheapest meat a farmer can use is the product of his own farm. This is also true of the suburban or town farmer who fattens one or two hogs on kitchen and truck garden wastes. Many farmers, it is said, will have their own meat supply for the first time this year.

This is the equipment needed for slaughtering: An eight-inch straight sticking knife, a cutting knife, a 14-inch steel, a hog hook, a bell-shaped stick scraper, a gambrel, and a meat saw. More than one of each of these tools may be necessary if many hogs are to be handled and slaughtered to best advantage. A barrel makes a very convenient receptacle in which to scald the animal. It should be placed at an angle of about 45 degrees

at the end of a table or platform of proper height. The table and barrel should be securely fastened to prevent accident to the workmen during the scalding. A small block and tackle will reduce the labor of handling the animal.

Only hogs which are known to be healthy should be butchered. There is always danger that disease may be transmitted to those who eat the meat, while the quality of the meat is always impaired by fever or other derangements. Hogs can be killed for meat any time after eight weeks, but the most profitable age at which to slaughter is eight to 12 months. An animal in medium condition gaining rapidly in weight yields the best quality of pork. Hogs intended for slaughter should remain unfed for at least 24 hours, or better, 30 hours, and all the clean, fresh water they will drink should be provided. Temperature can not be controlled on the farm, but it is possible to kill when the weather is favorable. In the fall it is best to kill in the evening, allowing the carcass to cool over night.

Feeding Corn, Milo and Other Coarse Fodders

**W**E have an inquiry from a San Jose subscriber as to the value of corn fodder, especially for horses, how it should be harvested and fed; also an inquiry from a Los Angeles subscriber as to the feeding of dwarf milo. These questions were referred to Prof. F. W. Woll of the university farm at Davis, and he answers:

"As to comparative dairy feeding value of dwarf milo fodder and alfalfa hay, in the absence of exact experiments no definite figures can be given. It is certain that the former cannot entirely take the place of the latter in feeding dairy cows or other farm animals, for it is low in protein and supplies mainly starchy materials that go to produce heat and fat, while alfalfa hay is a high protein feed. But for maintaining stock at an even weight or, to a limited extent, for fattening cattle and sheep, milo stalks and similar feeds will prove well adapted as partial substitutes for hay, especially in these days of high prices for all feeding stuffs. Judging from the amounts of digestible components in alfalfa hay and milo or kafir stalks, we are doubtless justified in assuming that the latter have approximately one-half the feeding value of alfalfa hay for the purposes stated, and they may be utilized to advantage as part of the roughage ration for all kinds of farm stock, but especially for wintering cattle or sheep or for idle stock.

"The best way of feeding stalks of either the grain sorghums or Indian corn is to run through a feed cutter or shredder. This method will enable one to realize a maximum nutritive value from the feeds as they will then be eaten practically without waste. In the Central and Eastern states corn stalks are now commonly shredded in the fall and fed from the stack or in the barn. If one has a silo and some succulent feeds like green alfalfa available at the time of filling the silo, the dry stalks of either Indian corn or the sorghum varieties can be made into silage and a valuable and palatable feed secured. It is also possible to make at least a fair quality of silage out of these products by adding

considerable water to the cut stalks as they go into the silo or after each load.

"A 1500 pound horse will eat about 20 pounds of hay or more a day. If he is working a part of the feed must be given in concentrated form, either oats, barley, milo, etc. Ordinarily a horse doing moderate work is fed some 12 to 15 pounds of hay per head daily and about 10 to 12 pounds of grain or grain feeds. The latter may be either oats, barley or milo, or mixtures of these grains with wheat bran, cocoanut meal, beet pulp, etc., the bulk of the grain ration being as a rule made up of barley or oats. Milo is often fed heads and all to horses doing light work."

ABERDEEN-ANGUS

The American Aberdeen-Angus Association, 817 Exchange Avenue, Chicago, is issuing a beautiful 88 page book, cover in four colors, "Supremacy of Aberdeen-Angus Cattle." It gives reports of many fat stock shows of Great Britain and America and many illustrations, beautiful half tones, of prize winners, also half tones of different cuts of beef from Aberdeen-Angus steers. Besides finished records quoted there are short articles touching upon Aberdeen-Angus in feed lot, for baby beef, their behavior in different sections of America, and items showing the favor in which they are held by the breeders, feeders and packers.

The milking pails should have few seams, and such seams as are present should be made smooth with solder. If any rust spots appear, such as is often the case with light-weight tinware, an entrance is given in the soft iron for unfavorable bacteria and for particles of decaying matter.

The Allies should be thankful that Americans eat turkey for their Christmas Day feast instead of pork.

Brawley, Imperial Valley now has over 500 acres of cabbage planted.

No Other Tractor Like It

**S**END the coupon below for the wonderful story of the little Bean TrackPULL Tractor—the tractor that works in orchards and vineyards as no other tractor can. Note some of the features listed below. Then get the book at once. Compare this tractor with the kind you know. See how this one fits your needs.

1. Pulls instead of pushes itself over the ground.
2. Can be "gee-ed" and "haw-ed" out of holes and soft places like a team.
3. Has full-power pull on turns as on the straight-away.
4. Turns clear around in a 10-foot circle (5-foot radius).
5. Plows or harrows as close up in the corners of fields as a team.
6. Plows as close to vines and trees as a team.
7. Makes little difference how far off center you hitch.
8. Goes under branches of trees no team can get under.
9. Runs stationary machinery up to 10 h.p. when not in the fields.
10. Weighs less and costs less to run than wheel-type tractors of same power.
11. Pays for itself in what it saves.
12. Light weight on long track surface.
13. Cultivates 10 to 15 acres in 10 hours.
14. Plows from 4 to 7 acres in 10 hours.
15. Little power required to pull tractor—power all goes to pull implements.

BEAN TrackPULL Tractor

Mail the coupon now — it doesn't obligate you. It simply brings you all the facts. When you get them decide if you want the patented Bean or an ordinary kind. For more than 30 years we have built and sold reliable orchard and farm machines. You can rely on the fact that the Bean Tractor at work makes good our every claim.

KILLEFER QUALITY

Monarch Cultivator

KILLEFER EFFICIENCY

The Killefer Monarch Cultivator has more uses on the ranch than any other tool we manufacture. For chiseling bean and beet land before planting it has no equal. As an Orchard Cultivator, where deep cultivation is desired, it gives perfect satisfaction.

As an Alfalfa Cultivator, when fitted with our Special Alfalfa Tooth, it does excellent work, loosening the ground to a depth of from six to eight inches without injuring the stand. This deep cultivation enables the water to percolate to a greater depth than by any other method of cultivation except subsoiling.

Made in 5, 6 and 8-foot sizes. Send for Descriptive Circular M.

## Rubberkote

Will Make Your ROOFS and BUILDINGS the Same as NEW

NOW IS THE TIME TO PAINT YOUR House, Barns, Silos, Windmills, Fences and Roofs. Rubberkote is made for all exterior painting, twice as heavy as stains, guaranteed to outwear any local paints, easy to apply as it comes from the package. Heat, rust and weatherproof; made for the weather conditions of the West. Rubberkote is made for all makes of roofs, either tin, shingles, galvanized iron, corrugated iron, shakes, composition, paper, Malthoid, Rubberoid, etc. Rubberkote is made in four permanent colors, green, red, brown and black. Guaranteed not to peel, scale or blister for five years. Stands contraction and expansion; weighs over 500 pounds to the barrel.

We pay freight to any railroad point in California

In three size packages only. Note prices. Only a limited amount at these prices.  
 RUBBERKOTE, Color Red and Brown, 50-gal. barrels, freight paid....55c gal.  
 RUBBERKOTE, Color Red and Brown, 25-gal. barrels, freight paid....59c gal.

## State Beekeepers Convention

THE executive board of the California State Beekeepers Association has issued a call for a general meeting of beekeepers of the entire state to assemble in Los Angeles in the state building at Exposition Park, December 28, 10 a. m. The principal business of the meeting will be the organization of a state beekeepers exchange. The department of agriculture, the state university and the state market director have given assurance of support for this movement, and the beekeepers will take advantage of the present conditions to put their organization on a business basis. F. A. Alexander of Ontario is president and M. C. Richter is the secretary. Other

members of the executive committee are James Kerr, Charles F. M. Stone and J. C. McCubbin. Besides the regular discussion of business and organization, President Alexander will touch upon buying and selling collectively; Harris Weinstock will discuss cooperative marketing; county clubs and other work in the past will be the subject of an address by A. W. Horne; rubbing elbows with the farm adviser by some representative from the state farm; what the department will do for the bee keeper will be discussed by E. F. Atwater, representing the bureau of apiculture; better queens and better methods, or how to get more and better honey will be discussed by Professor Willis Lynch.

## Apparatus for Bee Culture

Written for California Cultivator By E. Ralph de Ong

THE modern hive with removable frames is not just a home for a swarm of bees; it is a tool for the beekeeper. And only by its use would the large commercial apiary be possible. Sixty years ago the movable frame was unknown and the box hive or "bee gum" was a solid mass of comb and propolis (vegetable gum) with narrow runs here and there by means of which the bees could crawl through the mass. When honey was desired the hive would be torn open and a chunk of the conglomerate comb and propolis was cut out. If much brood was present the entire piece was probably thrown away, the damaged cells were leaking honey freely, and altogether it was far from being an attractive article in itself or one which could be utilized in the modern system of extracted and comb honey. Some beekeepers were so radical as to burn sulphur in the hives at night and kill every bee in the colony and then rob it at their leisure. These wasteful practices are now at an end in commercial beekeeping for two reasons especially; first, an attractive material must be put out to compete with other beekeepers, and this is possible only with a good grade of extracted honey or a pleasing comb honey package; second, the introduction of brood diseases makes it absolutely necessary to be able to examine the contents of any hive, quickly and without seriously disturbing the bees.

The desired end in both cases is reached by means of the modern hive, the Langstroth type being the standard. This consists of a four sided box, usually dovetailed together, the end boards are rabbeted to serve as a support for eight or ten frames, nine and one-eighth inches high by 17½ long, hanging freely from the top of the hive, without touching the top, sides, or bottom and separated from each other enough so that the bees can move freely between them and also allowing the frames to be removed for examination or for extracting the honey. The usual space allowed for a bee way is one-quarter of an inch. This box, the container for the frames, rests on a bottom board so made that a bee way is left when the hive is resting on this board. A telescope cover or other style of cover fits on to the top of the box, which completes the hive; if more space is needed for brood-rearing or storing of honey, the cover is lifted and another hive body, containing frames or a shallower box with sections for comb honey, is placed on top of the first one and the lid put on the top of the latest addition. In this way a hive may be built up four or five stories deep.

Besides the hive and additions there will be needed a medium sized smoker, hive tool, for loosening frames in the hive preparatory to lifting them out, the bee veil, and for those to whom the sting is especially objectionable, a long glove is very desirable. A professional beekeeper seldom wears gloves, as he has been stung so many times, an immunity has been developed so that the sting is not especially trying.

A complete hive will be needed for each colony of bees to be kept, which should be furnished with self-spacing frames punched for wiring, and a full sheet of "medium brood" wax founda-

tion for each frame, making a little over one pound of foundation for each hive. This foundation is rolled so as to give the imprint for a worker cell on each side of the foundation, if full sheets are not used, the bees will draw it out to the full size of the frame, and make considerable drone comb, which is to be avoided.

Extracted honey production will require two extra hive bodies the same size in every way as the hive body, they should also have full sheets of foundation in each frame and be wired so that the comb can be run through the extractor without breaking it. Besides the hive bodies and frames, a spool of tinned wire will be needed, an imbedding tool, uncapping knife and a two frame extractor. A ten frame hive complete with bottom board, cover, and full foundation will cost about two dollars and a half each in small lots, extra hive bodies with frames but no foundation will cost eighty or ninety cents. The extractor costs about thirteen dollars and the other materials about three dollars.

Comb honey will require two or more shallow supers per hive instead of the extra hive bodies, seven section holders per super, wooden separators or frames according to the style of section used and the section or honey box in which the honey is stored, the most common size for sections is 4¼x4¼x1½ inches wide. The cost per super with all accessories except full foundation, is about sixty cents a piece. Narrow strips of thin super foundation can be used in the sections but full sheets save much time for the bees. Different types of section presses for making up the section material may be gotten for two or three dollars a piece.

All the parts of a hive, together with frames, sections, section holders, and wax foundation are furnished in standard sizes by supply houses found in all our larger cities. It remains for the beekeeper to decide on the type of product which he proposes to furnish to the market to guide him in the selection of his supplies.

Opening the hive and handling the bees requires only the tools previously mentioned, i. e. hive tool and smoker, fill the latter with a roll of old burlap or damp excelsior, light and by a vigorous use of the bellows create a dense cloud of smoke. Blow a little into the entrance of the hive, then lift the lid and smoke them a little more, this disturbance tends to disorganize the guards and start the bees to gorging themselves with honey. As little smoke as possible should be used and the work done through the middle of the day when most of the workers are out, to minimize the disturbance to the hive. The operator should stand at the rear or side of the hive while working to avoid interference with the workers coming and going from the hive. In all manipulations avoid hasty movements and crushing of bees, the latter having a tendency to anger the colony. The work may be somewhat trying on the nerves at first but if persisted in, it will soon be found that it can be carried on with an increasing degree of comfort. It generally comes as a great surprise to find how easy it is to handle bees after the operator has learned to control himself and observe a few simple

rules. If possible visit an apiary and work with the owner or even devote an entire summer working for a professional beekeeper.

#### ARTIFICIAL COMB

A subscriber recently called our attention to the fact that bees can now make more money by the aid of the great American steel trust. The bees have been impressed during the shortage of labor in the construction of honeycomb. It takes something like a dozen pounds of honey to produce one pound of comb, and with honey hovering between 15 and 20 cents, it is a serious factor, hence substitute made from the cast-off comb which was a great saving. Now, however, comes

another method of "helping the war" and the steel trust is making a comb which even the bees themselves take to. It is pressed from steel which when completed is dipped in beeswax, put in Langstroth frame, and it is all ready for the depositing of the honey. The comb is of a size which prevents excessive breeding of drones, saves immensely on labor of the bees, and in this state should produce tons of honey more than under other circumstances. We believe the comb is not yet out in large quantities, but method of manufacture has been simplified until now it is sure that it will soon be offered on the market at prices which will mean its general use. The inventor is Geo. MacDonald and associates.

## Six Thousand Hens on Three Acres

Written for California Cultivator By Jean A. Koethen

**T**O GO into the chicken business as a lad of 18 with a few hundred hens and no experience to speak of, and in five years to build up a flock of 6000 layers, with a business which runs into many thousands of dollars every year, is going some, but it is the achievement of Irving A. Sherlock of Burbank. At an age when most boys have not yet decided what they want to do in life Mr. Sherlock finds himself owner of this mammoth poultry plant, buying feed by carlots all over the country and managing every detail of the business with a scientific accuracy many men never attain.

Mr. Sherlock's houses and yards occupy less than three acres, the remainder of his acreage being devoted to the raising of green stuff. The long laying houses, of which there are five, are 16 feet wide and divided into sections 20 feet long, each section furnishing roosting space for from 100 to 125 White Leghorn hens. All houses front east and have low gable roofs with overhanging eaves. After some experimenting Mr. Sherlock has succeeded in developing a system of ventilation which is particularly well adapted to a windy section. Instead of the open front, which is commonly used, these houses have a front which can be entirely closed except for about six inches under the eaves. Below this and running the entire length of the house are two ten-inch openings over which are hung boards hinged on the upper side, which may be raised or lowered at will. Each section has also a heavy, sliding door. The advantage of a sliding instead of a hinged door is that in high winds it may be tightly closed or left partly open to give the hens access to the yards, and there is never any slamming. Nests are in tiers of 14 along the front of each section and are easily removed for cleaning. Automatic fountains are used. Instead of the ordinary hopper a large trough some two feet deep is used for the dry mash. "I tried all plans of hoppers," explained Mr. Sherlock, "and found that those which keep the hens from wasting the mash also kept them from eating as freely of it as they should. The open trough has this fault, that the hens getting into it with their feet, as they do, foul the mash, but at least they eat freely and no mash is wasted."

Each section is fitted with a 40-watt Mazda lamp. At this season the light is turned on at 3:30 a. m. This starts the hens to eating at least two hours earlier than they otherwise would, and the result is a considerable increase in egg production. Last fall when the lamps were installed the daily output of eggs was raised from 10 to 30 per cent in three weeks. This fall the benefit has been less apparent, a circumstance for which Mr. Sherlock blames lack of corn in the ration. Leghorns, he believes, need considerable corn in chilly weather, and this fall, because of prevailing high prices, the corn has been almost cut out of the ration. The electric lights are not turned on in the evening as they are on some plants, not because longer working hours might not be a desirable thing, but because the hens have trouble finding their places on the roosts after the lights are out.

As the hens are all layers, not a male bird being allowed on the place, they are kept on a more intensive system than would be possible with breeding stock. Each long house has

its yard the length of the house and about twice as wide, which gives abundant room for exercise but nothing more. From 15,000 to 20,000 baby chicks are bought each spring, and these are raised in four brooder houses, each with a capacity of 2500 chicks. These houses are heated by hot water pipes connected with a large gasoline heater in the lower house.

"The best dry mash," said Mr. Sherlock, "is one which contains a variety of ingredients. Price and availability must determine just what are used." The dry mash which is at present used for these 6000 layers consists of 500 pounds bran, 200 pounds fish meal, 200 pounds bone meal, 100 pounds coconut meal, 100 pounds ground barley, 200 pounds ground milo, 100 pounds ground corn, 25 pounds charcoal, five to ten pounds salt. This is kept before the hens at all times. The whole grain mixture consists of equal parts barley, oats and milo. All whole grain is soaked about 48 hours, or till the tiny white sprouts begin to show. The first 24 hours it is soaked in water, the second 24 hours it slowly drains in a box with some leaks, not too many, in the bottom. In addition to the dry mash and soaked whole grain, a moist mash is fed each morning. This is prepared in the following manner: A sack and a half of cracked barley, half a sack of whole oats and half a sack of bran are soaked all night in a cement vat with all the water they will absorb. Next morning sufficient dry mash is added to make the mixture crumbly, and to this is added extra fish meal in order that the protein content may be as great as possible. This is fed in the large troughs in the yards in which greens are fed later in the day.

On this ranch for the first time I saw hens eating spineless cactus. They like it too, like it so well that Mr. Sherlock makes it the chief item in the green feed rations of his birds. Barley, kale, mangel-wurzels and alfalfa are fed once or twice a week just for variety, but for every day dependability and cheapness of production he pins his faith to cactus. An acre, he says, will produce hundreds of tons of green. It requires no water, but cultivation must be liberal and the supply of fertilizer generous. As the cactus plot is near the runs, the droppings are carted out and spread in a thick layer over the entire plot. There is no danger of making it too deep.

This very successful poultry business has been built up on two fundamental principles: First, that the man who expects to make money from selling eggs must buy feed in large quantities and at the very lowest wholesale prices. Mr. Sherlock has \$10,000 tied up in feed right now. He buys wherever he can get the best prices, east or west, north or south, some of his corn coming even from Manchuria, and buys at harvest time when better bargains can often be secured. By this method of buying he was able last year to keep the average cost of his grain down to \$2.25 per hundred. This year it will run a little higher, probably to about \$2.60.

Substitution of machinery and labor saving equipment for man power is Mr. Sherlock's second fundamental principle. In his feed house, which is a commodious two-story building, he has installed every mechanical device for lightening labor. A six horse power engine runs the mill which grinds the grains for the dry mash, and these

ground grains are mixed in a tumbler-mixer suspended between the two floors, which is also run by the engine. A huge hopper in the middle of the upper floor receives the whole grains which must be mixed for the day's feeding and runs them down through a canvas funnel into sacks on a wagon below which hauls them to the runs. About three-quarters of a ton of feed is consumed daily, and the preparation of it all for consumption is no small part of the day's work. By means of these mechanical contrivances Mr. Sherlock and one hired man are able to do all the ordinary work on the place with an extra man occasionally for extra jobs. Cost of labor, which is such a problem with poultrymen, is thus reduced to a minimum. One man is able to do the ordinary feeding and cleaning, and to carry on practically the whole business, which with less complete equipment would require the entire time of at least four persons. It is by such practical, business like methods as these that the poultry industry has been built from a matter of a few back lot mongrels laying in summer to a billion-dollar aggregation of bred-to-lay all the year round producers.

#### LEG WEAKNESS

Leg weakness in chicks is not yet thoroughly understood. Some of my broods of chicks have been reared this spring under conditions that ought to have given me cases of leg weakness. They have been on board floors, dry brooders, no sand or earth, indoors. Yet I have not had one chick on the floor with leg weakness. This was my same experience last year. Does the sour milk help prevent? I do not know. It is sour milk, for the chicks, right from the start. Sour milk and chick feed the first week or two; then sour milk, chick feed and my egg laying mash for the remainder of the time that heat is given the chicks. Then they go out on range. Some of my brooder flocks have been covered with sand, some with sand and alfalfa chaff, and others with chaff alone from the barn floor. I see no difference in the strength of any of the chicks.—Am. Poultry Advocate.

#### AVOID CROWDING

One of the chief causes of death in young chicks is the result of overcrowding. Chickens cannot sweat as they have no sweat glands in the skin, therefore, the impurities and moisture must be crowded out through the breath. If the chickens are overly crowded and there is not sufficient ventilation in their roosting quarters, the air becomes filled with impurities and laden with moisture, which places an unusual strain on the system of the bird in many ways, especially upon the kidneys, which results in a weakened system. If the chickens come from the coop in the morning, weak and tottering, and with no appetite, this accounts for much of the lack of vitality, which we find in many flocks.

### HOGS

Registered Durocs—We offer for sale a choice service boar out of a daughter of Modesto King and by a grandson of Burk's Good E Nutt; young sows and boars out of Model Queen of U. F. and by a son of Golden Wonder; young sows and boars out of a granddaughter of John Orion and sired by a son of Model Col.; three young boars out of a great sow of Crimson Wonder breeding and sired by a son of King's Col. Every one cholera immune by the simultaneous method. Registered, crated free of charge. If you cannot visit us write for prices. Derryfield Farm, I. O. O. F. Building, Sacramento, Cal.

The Billiken Brand of Chester Whites—Entirely sold out of bred sows and gilts. Have a few open gilts of March and April farrows; also 6 boars, same age. Have 9 young tested sows to offer for late December shipments. These have each farrowed once and will be bred for a late March or early April farrow. Fall pigs, both sexes, now being weaned and will be ready for delivery during December. Good breeding stock is getting very scarce and rapidly increasing in value. If you want some of this easy feeding, mellow type, get busy with your orders. C. B. Cunningham, Mills, Cal.

Grape-Wild Farm Berkshires—World's Fair Grand Champion Grand Leader 2nd heads our herd, not only himself a champion but the sire of champions. At the 1916 California state fair his daughters won all the senior sow classes including the grand champion sow. At the 1916 Oregon state fair a Grand Leader sow was junior champion. We are offering a number of choice boars of exceptional breeding and are also booking orders for fall pigs. A. B. Humphrey, Escalon, San Joaquin Co., Cal.

20 of the Finest Boars Ever Sold to improve the herds of pork producers. High price of pork assured because of the scarcity of breeding stock. Improve your herd with a good Poland-China boar. I have them from six to eighteen months old, priced from \$40 to \$100. Saving all sows for Kings County Poland-China Breeders' Sale, February 20. Bernstein's Ranch, Hanford, Cal. Hogs shipped on approval.

Superba, World's Grand Champion Poland-China boar and one of the greatest sires of the breed. Spring boars ready for service, also few sows bred to this noted sire, reasonably cheap. Rough's Greenfields, Arlington Sta., Riverside, Cal.

Berkshires—First prize junior boar; first and second senior boar pigs including junior champion; fifteen spring and fall open gilts sired by Ames Rival 115, champion boar; and two junior yearling bred sows priced cheap for immediate sale. F. D. Hall, Perris, Cal.

We Pay Cash for Hogs of All Sizes, weights and breeds. Any number from one to several thousand considered. What have you? Durbin and Forbes, 722 San Fernando Building, Broadway 4170, Los Angeles.

For Sale—Thoroughbred Poland-China weanlings, and gilts, also 18-months old boar, winner first prize Riverside County Fair. Primm Vista Gardens, R. R. 4, Arlington Sta., Riverside, Cal.

PLW. Duroc-Jerseys, the most consistent winners wherever shown. Peters, Lamson & Walker, Devore, San Bernardino County, Cal.

Big Type Durocs—Well grown out February and March pigs of either sex in any quantity. We ship only the tops and butcher the culls. F. M. Johnson, Napa, Cal.

Most Money in Duroc-Jerseys—Bred sows and weanlings, either sex all the time. Delta Farm and Live Stock Co., Colton, Cal.

Large Yorkshires—The ideal hog for the progressive farmer. Service boars and fall pigs, both sexes, for sale. A. L. Tubbs Co., Calistoga, Cal.

Large Type Poland-Chinas are prolific and profitable. Can furnish boars any age at reasonable price. J. A. Crawshaw, Hanford, Cal.

Rancho Rubio Durocs all sold out except some choice fall boar pigs. Write for prices. Elmer Lamb, Ceres, Cal.

Greenwood Farm Durocs—"Size with Quality." H. C. Witherow, Palo Cedro, Shasta County, Cal.

Berkshires—Sired by Star Leader, the \$1,500 boar, ready for service. Kounias Registered Stock Farms, Modesto.

Carruthers' Farm Berkshire Hogs—Our herd won Premier Exhibitor prize at the P. P. I. E. Exposition, Mayfield, Cal.

Legal Queries

Louis B. Stanton, attorney, 243 Wilcox Building, Los Angeles, will answer legal queries in this department.

Immediate mail replies cannot be given except where fee to Mr. Stanton is paid. When replies are wished in Cultivator address query to 115½ N. Broadway, Los Angeles.

Term of Lease

In 1905 A leased a dairy from B for two years with option of renewal for ten years more. At the end of the two years A refused to tie himself up for ten years. B suggested another two years. They arranged it by scratching out the original date "October 1, 1905" and redating the original lease "October 1, 1907," and both parties resigned the old lease. Does this second date hold good? B claims that the lease runs 12 years from 1905; B claims 12 years from 1907 and has made no arrangements to move.—Subscriber.

It is very clear that on October 1, 1907, the minds of the parties fully met on a term of two years thereafter with the option of ten years from 1909. In fact they made a new lease at that time and economically made use of the old paper. The lease runs to October 1, 1919.

Title

A bought lots and paid taxes thereon for many years, then stopped. Her brother subsequently obtained the tax title, after having acted as her agent in paying the taxes. A died, the brother sold the lots to C, who sold to D. D finds an error in the tax title. If all of the heirs of A sign quit-claim deeds will it be sufficient to give a clear title?—Subscriber.

Circumstances might be such that the action of the brother who admittedly was the agent of A in paying the taxes would constitute him a trustee for A and thus in himself gain no equitable title. The quit-claim deeds, if signed by all heirs of A, should be sufficient to give a practical working

title, but there would always be a certain cloud thereon until the statute of limitations had fully run on all possible claims of heirs unknown. The only way the cloud could be cleared is by an action of some sort—either probate of the estate of A and transfer by the administrator, or an action to quit title and judgment thereon against all heirs. The difficulty is that there is no record evidence that all of the heirs have conveyed their rights nor who the heirs of A are. The judgment is the only way that it can be cleared up until the statue of limitation has run against all claims.

Boundary Line

A owns several acres which are fenced with the land of B, either on account of some verbal understanding or done when people were not sure of surveys or so particular about ownership of small parcels as now. Do years of claiming the land give B any right to it? Is there such a thing as possessory title? How shall A proceed to get possession of the land? — Subscriber.

The question is indistinct about the very points which it is necessary to know. A valid agreement between adjoining owners establishing a doubtful or disputed boundary is binding on themselves and those claiming under them, whether it is the true line or not. This is especially true where the adjoining owners enter into respective possession and improve the lands according to the line agreed upon as it would be manifestly inequitable to permit one of the parties to repudiate the agreement. But, on the other hand, if this location of the line was made subject to the subsequent establishment of the true line it is not binding when the true line is found to be different from that established and it is found that they were mistaken in their idea of the true line unless there are other equitable reasons that the locaton should remain undisturbed. The statue of limitations does not necessarily apply because one requirement of that is that a party pay taxes upon the land for five years and if the description on the taxes does not include the land in dispute then he has not paid the taxes on that land. The important thing, as you will see, is the exact facts concerning the establishment of the line; the presumption, of course, is that the party holding the property rightfully holds it. It would be upon A therefore, to show the strength of his claim. This can be done by bringing an action for ejectment against B from the land.

Yamhill County, Oregon, less than two years ago had sixty silos; that year it built 54 and during the past year 115 more. This makes practically 100 per cent increase every year.

Queries

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Twig Borers.

Am sending twig from a diseased French prune tree. Can you tell me what is wrong with it and the remedy? —Subscriber, Anaheim.

The twig seems to have been infested with the twig borer which has left his burrow in the twig and over the wound a tree gum has formed. The adult form is a beetle which deposits the egg on the twig. When it hatches it tunnels into the wood and bores in different directions. It is not a serious pest and there is no very satisfactory remedy.

EXAMINATION FOR INSPECTORS

The California state civil service commission announces examinations for inspectors for the quarantine division of the state commission of horticulture on January 19. The last day for filing applications will be January 12. Those wishing to make application should write state civil service commission, Forum Building, Sacramento. Examinations will be held in Sacramento, San Francisco and Los Angeles. The salary range is from \$100 to \$125 a month.

Duties include inspection of importations of plant products, inspection of baggage and personal belongings of passengers arriving from Hawaiian ports on domestic vessels, inspection of horticultural material found by the United States customs officers in the baggage of passengers arriving from foreign ports, and search for contraband fruit and vegetables on vessels arriving in California ports.

Candidates must have lived or worked on a farm or orchard, and must have a general knowledge of plants so as to distinguish the commoner varieties by their appearance, a working knowledge of insect pests and plant diseases and their connection with known hosts, and familiarity with the state horticultural laws, quarantine regulations and restrictions, and with the nature of bills of lading, manifests and certificates.

The examination is open to all American citizens residing in California, who have reached their twenty-first but not their fiftieth birthday on the date of their examination and who meet the above requirements.

Six hours will be allowed for the written test, from 9 a. m. to 12 m., and from 1 to 4 p. m. Candidates who fall below 70 per cent in either subject will be considered as having failed in the examination.

SCARING BIRDS

Here is a suggestion from an exchange from New South Wales, Australia to keep birds from fruit tree buds. Suspend above the tree an effigy of a hawk. The editor asserts that in trial there it completely scared the small birds away.

RELATION OF SOILS TO BLASTING

By J. R. Mattern

Many people pay no attention to the kind of soil the stump stands in when they go to remove it with powder. This is a mistake, because different treatment is required in light and heavy soils and in wet and dry soils, to insure the best results, and even to insure success.

The ideal blasting conditions are a water soaked clay, when the temperature is high. Powder will do its maximum under such conditions. As the soil character departs from this and becomes light loam or sand, and becomes drier, the powder is placed more and more at a disadvantage, because it has no firm support back of it. If you consider that the gases act a good deal like a pry to which a solid foundation is necessary, you will comprehend how essential is a solid earth backing for the powder gases when they are to remove the roots of stumps.

In wet clay you can use the smallest charges and place them close to the wood. If the ground is lighter or drier, you must place the charges somewhat deeper in order to hold the gasses to their work instead of passing to the air above right through the earth. Consequently they must be larger. In light ground that is dry several light charges fired at the same time with an electric blasting machine are likely to be much more effective than one heavy charge. If the roots are far underground, in dry ground, the charge should be placed right against them, but when the roots are near the surface under these conditions the charge should have a considerable depth of earth between it and the wood.

It should be remarked that the most economical and easiest stump blasting always can be done when the ground is water soaked. Not only does the powder work more efficiently but the holes are easier to make and the roots come out with less force.

Anyway, there is one feature which most autos in California do not have to consider, and that is the effect of zero weather on the cooling system. Owing to the thinness of the radiator cells bursting by freezing is common in cold weather countries. Of course, it is well known that alcohol will not freeze, and some who are blooded enough have used alcohol instead of water during the winter season. However, with alcohol at \$1.25 a pint, it is presumed the California auto owners will use but little of that in their cooling system. The more common usage of the East is to add calcium chloride to the water used in the cooling system. Two pounds per gallon will lower the freezing point to 18 degrees above zero; three pounds per gallon to 1.5 above zero; four pounds per gallon to seven below zero; and five pounds will prevent freezing at below zero.

Beaverton, Oregon, has a factory for making starch from potatoes. The factory guarantees 50 per cent per hundred weight with additional percentage of wholesale price of the starch.

## The Cultivator Patterns

- 8634—Girls' Plaited Coat. Cut in sizes 4, 6, 8, 10 and 12 years. The lower sections of the coat are plaited to the yoke in groups, and a narrow belt holds the plaits in place.
- 8624—Ladies' Waist. Cut in sizes 34, 36, 38, 40 and 42 inches bust measure. The front of the waist is all in one piece, and the neck is cut in U-shape.
- 8143—Ladies' Shirtwaist. Cut in sizes 36, 38, 40 and 42 inches bust measure. The back is cut to extend over to the front giving the effect of a shoulder yoke.
- 8607—Ladies' Russian Blouse Dress. Cut in sizes 34, 36, 38, 40, 42 and 44 inches bust measure. The dress has a very military effect if it is made with a high collar and trimmed with braid.
- 8595—Ladies' House Dress. Cut in sizes 36, 38, 40, 42, 44 and 46 inches bust measure. The waist is in plain shirtwaist style, and the skirt is three-gored.
- 8642—Girls' Bolero Dress. Cut in sizes 6, 8, 10, 12 and 14 years. The waist is finely tucked at the front and the closing is under the center front plait.
- 8404—Ladies' Two Gored Skirt. Cut in sizes 24, 26, 28, 30 and 32 inches waist measure. This is a two piece model gathered all around the slightly raised waistline.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

### HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 c) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

### A Christmas Acrostic

Christmas hath a darkness  
Brighter than the blazing noon;  
Christmas hath a chilliness  
Warmer than the heart of June;  
Christmas hath a beauty  
Lovelier than the world can show.  
—Christina Rossetti.

Heap on more wood! the wind is chill,  
But let it whistle as it will,  
We'll keep our Christmas merry still.  
—Walter Scott.

Ring out, ye crystal spheres!  
Once bless our human ears,  
If ye have power to touch our senses so.  
And let your silver chime move in melodious time,  
And let the bass of heaven's deep organ blow,  
And with your ninefold harmony make up full consort  
To the angelic symphony.  
—John Milton.

It is the Christmas time,  
And up and down 'twixt heaven and earth  
In glorious grief and solemn mirth  
The shining angels climb.  
—D. M. Dinah Craik.

Shepherds at the grange,  
Where the Babe was born,  
Sang with many a change  
Christmas carols until morn.  
—Henry W. Longfellow.

The star which they saw in the east  
Went before them till it came and  
Stood over where the young Child was.  
—Matthew.

Merry Christmas, hear them say  
As the east is growing lighter.  
May the joy of Christmas day  
Make your whole year gladder, brighter.  
—Margaret Deland.

Again at Christmas did we weave  
The holly round the Christmas hearth.  
—Alfred Tennyson.  
Sing the song of great joy that the angels began,  
Sing of glory to God and of good will to man.  
—John G. Whittier.

### A CHRISTMAS IN AFRICA

Written for California Cultivator  
By John Bensley Thornhill F. R. G. S.  
Copyright 1917 by the Rolenz Press Service

**D**O YOU ever look back at the different Christmases you have spent? I do. I have spent two at sea, five in civilization away from my own country, and nine right in the wilds. The most unique of all those I ever spent away from home was at Nemwala, the headquarters of the district commissioner of the Mashukulumbwe country in Northwestern Rhodesia. Although I am writing of 12 years ago, you will find little about the Mashukulumbwe in the geography books, so to start my story I will tell you a little about them. They are of the most turbulent of the black races in the British territory north of the Zambesi, and are great cattle owners, splendid fishermen and mighty hunters.

In America it is "Go West." In South Africa it is "Go North" and for more years than I like to mention I have been going north. Down South in Africa we knew the Mashukulumbwe, many of whom worked in our mines, under the generic term of "Zambesi boys." We also knew of their weakness for killing people. There is some excuse for this amiable trait. No Mashukulumbwe maiden will look at a lover 'till she knows he has killed a man. Almost every hut in their well built kraals has one or more Kaffir pots on top of it, each pot indicating an enemy out of the way.

My work, which was keeping up with the South African advance and doing the general pioneer work that necessarily precedes the building of each stage of the "Cape-to-Cairo" railway, led me at the time about which I write through the Mashukulumbwe country. An established government in Northern Rhodesia had been formed two years previously, and intertribal wars, slave raiding and slave trading were ceasing and the country was settling down to the peaceful prosperity that always follows in the wake of the Union Jack. After a hundred mile march, the first stage of a 600 mile journey from the railroad, I arrived at Nemwala six days before Christmas, 1905.

Andrew Dale, a former native commissioner of the district down South had been given the not exactly enviable job of ruling the Mashukulumbwe. On his arrival, Dale chose Nemwala for his headquarters. It is one of the finest sites I have ever

seen. Standing on a little knoll of open ground about 50 or 60 feet above flood plain of the Kafue, the Zambesi's largest tributary, it gives a splendid view east, north and south over the rich and open marshes that for a hundred miles or more border that great river. It is about five miles from the Kafue, and a natural canal running northwest and southeast connects the lagoon below the camp with the Kafue. To the west is the interminable open forest of South Central Africa. The buildings, which included three European residences, a court house, postoffice, jail, and quarters for the native messengers and the very small detachment of armed native police, were placed round a great square of about four acres of white sand. They were constructed of poles mudded over with clay and had high pitched, thatched roofs. The soil all round was very porous and ideal for a sub-tropical government post. The bridge of the Cape-to-Cairo railway across the Kafue has been constructed since my visit. It has 13 spans of 100 feet each and is 40 miles south of Nemwala.

Less than a year before my visit, about the time of Dale's arrival, the government had been compelled to send troops up to catch and hang a few Mashukulumbwe for murdering foreign natives traveling through their country. This was a very forcible way of changing the habits of the Mashukulumbwe love lorn swains, who, as I have said, had no hopes of winning a bride without a pot to adorn the top of her future residence.

What with hippos—as we call the hippopotamus in Africa—and Mashukulumbwe, Dale had passed through some thrilling times. On one of his journeys through the Kafue flats—you will hear more about the Kafue flats for the Duke of Westminster and other powerful Englishmen now have large cotton plantations there—the Mashukulumbwe had turned on him. Dale had the good fortune to beat his retreat into the rushes that fringe the banks of the river. The Mashukulumbwe feared to follow him, for Dale was a pretty sure shot with the rifle. For two nights and three days, often up to their waists in water, and forcing their way through rushes half as tall again as themselves, Dale and his armed messenger gradually worked their way home with the Mashukulumbwe keeping on the grass of the flats outside and waiting on their chance to kill him when he broke out. Dale ruled them like a father, and at the time of my arrival not only did he speak their language (a difficult one) fluently, but also he had completely won their confidence. He did all he could to prevent them impoverishing themselves, by discouraging them from selling their cattle for the paltry sums in cash and the tawdry trade goods the enterprising white trader offered. At the time of my arrival the Mashukulumbwe were trooping in in their hundreds and paying hut tax without any demur, as if it were a recognized institution and not the first time it had been imposed.

To celebrate the successful collection of the hut tax Dale boldly invited practically the whole of the Mashukulumbwe nation to a real feast, sports and beer drink. Counting women, he must have had over 2000 adult natives in his camp. I thought this experiment rather a risky one, considering the reputation of the Mashukulumbwe, but I was glad to have the chance of some entertainment for Christmas, and I jumped at Dale's invitation to spend it with him, especially as for other reasons voluntary carriers were rather hard to get, and I most strongly object to impressed labor.

I put in six days before Christmas very comfortably. Both morning and afternoon I went out on the flats and shot puku, the small marshbuck which run in their hundreds on both sides of the Kafue. I also shot spurwinged geese, duck, teal, waders of all descriptions, and once I got a solitary snipe, the first I had ever shot in Africa. As Christmas drew near visitors began arriving. The district commissioner from adjoining government post and his clerk, an ex-artillery officer, trekked in from the northwest. The manager of a very important min-

ing company, who came of a well known South African missionary family, a very pleasant Irishman who was in charge of the ferry across the Kafue, and a Jew trader of the neighborhood brought up our numbers to eight.

The sports on Christmas day opened with a 10 furlong foot race. The 400 starters, a yelling, shrieking crowd of Mashukulumbwe, all bunched up together and led by four Europeans on horseback headed straight for the winning post at which I was standing as judge. The winner was one of the government messengers, and I believe if he could have been gotten to Europe he could have done wonders. For he had about half a mile of wire wound round each leg, and in the middle of the race the wire round his right leg became undone, bringing him down an awful cropper. Gathering up the loose wire in his hand, and with a lot still round his leg, he overtook the rest of the competitors and came in an easy first. Another of the competitions which went very well was throwing spears at pumpkins stuck on poles 40 yards away. After watching it I felt I should not like to fall foul of the Mashukulumbwe, for not only did they throw very straight and very hard but nearly all the spears were so sharp that one could easily shave with them. We had a canoe race on the lagoon in native dugouts (a very exciting event), a sack race, a three-legged race, a race for the little boys which was run off in several heats, and finally after the prize giving, a scramble for the women. Dale's clerk had a pile of fancy Kaffir clothes, cheap jewelry, beads and gewgaws such a women love, and he threw them up into the air right and left. The shrill shrieks of excitement and the wild scimmages of the laughing women were a really good windup to a successful and happy day. The feast came at night. Dale had caused gallons and gallons of Kaffir beer to be brewed. Towards five o'clock liberal supplies of meal and salt were handed to the women, who started cooking for the men. The men were divided into eleven companies, and to each company was given a fat bullock. I wanted Dale to run the bullocks out and let the Mashukulumbwe kill them with their spears, but he would not do so, for he considered the Mashukulumbwe too excited already, so he shot the bullocks one by one with his own heavy rifle.

We adjourned for dinner, and Dale gave us a repast composed of fish, buck and birds, supplemented by plum pudding, champagne and Port, and we wound up with Christmas

crackers. After dinner we had our chairs out on the square, and a huge log fire was lighted in front of us. The big chiefs, with their leopard skin coverings and bedecked with ornaments of savage splendor, sat by our sides, and our servants stood behind us. It was a clear night with a full moon. The young bloods of the Mashukulumbwe nation, of whom I counted 376 fully armed, gave us a splendid war dance, a vivid picture of fighting their foes, killing them and triumphing. Then the girls came out and danced and sang and clapped. The boys and girls together danced and swayed and clapped to the sound of native music and the beating of the war drums. When the white men turned in at four o'clock in the morning the Mashukulumbwe were still at it, and it will always remain a red letter day in their history. It was certainly the happiest Christmas I passed in Africa.

The next day I went down to the lagoon with Dale to try and get a hippo. We waited all the afternoon in the rushes without success; each time the hippo rose he never offered either of us a shot into his nostril, which is the only fatal shot when hippos are in deep water. I think Dale loved everything but hippo, and any hippo within traveling distance of Nemwala was in for a bad time of it. Dale told me that at one time an enraged hippo attacked him in a native canoe, crunched the side of it and forced him to take a 200-yard swim to the shore, and worst of all, to leave his two most valued rifles at the bottom of the Kafue in 50 feet of water.

Two days after Christmas my carriers arrived and I said goodbye to my hospitable host and resumed my journey northward.

#### WAYS OF COOKING BEANS

RECIPES for cooking beans in various ways, promised for last week's paper, were crowded out by special Christmas material. They are:

##### Baked Frijoles

This recipe is used in the kitchens of the better class households in Guadalajara, Mexico.

Soak about one quart of frijoles over night. Boil several hours slowly (where water is hard put in a good pinch of soda). Put two tablespoons butter (or substitute) in frying pan, fry 1½ tablespoons chopped onion. Add the beans and one teacup tomatoes, one tablespoon sugar, three or four red peppers (or ground chili to taste). Salt liberally. Stew together for an hour or so. Before serving pour into dish, cover with grated cheese (or grated bread crumbs, or both) and bake for a few minutes.—Mrs. G. O. Wilkinson, Blythe.

##### Use the Fireless Cooker

I generally bake beans in the fireless cooker. Soak the beans over night. In the morning put over the fire and cook slowly until the skins crack. Drain off the water, add salt, pepper, one or two tablespoons of molasses and a little stewed or canned tomatoes if liked. Pour over enough boiling water to come to the top of the beans. Pork is so high priced now I often use a substitute. A small piece of brisket placed in the middle of the bean kettle or pot, or any scraps of fat meat, I save and use in the bean pot. Use two stones in the cooker.

For stewed beans I soak and prepare as before except after parboiling I add a small piece of fat meat or a soup bone, cut fine a couple of onions, add salt and pepper and water, bring to boil and place in cooker with one stone. They can be cooked on the stove either.

Dried lima beans are excellent soaked over night and boiled in salted water with a pinch of soda and a little salt. Drain off water and make a gravy with milk, just a little thickening and season to taste.

Any dried beans, no matter how cooked, are fine put through a sieve, thinned with milk or water or soup stock and served as soup.—Mrs. May Buerkle, Whittier.

##### Baked Pink Beans

Boil one quart beans in plenty of water for an hour, stir in teaspoon soda, and drain off water. Then add fresh boiling water and cook until done, but whole. Fry medium sized onion, cut

in small pieces, to light brown with three slices bacon. Add this with two cups raw or cooked tomatoes, one tablespoon chili powder and salt to taste and bake three-quarters of an hour.

White beans are nice parboiled the same as pink beans. When cooked take out enough for one meal and season with cream or milk, a little shortening, salt, celery salt and paprika to taste. Add to remainder of beans one-half cup brown sugar or molasses, one teaspoon mustard, salt and pepper to taste and bake slowly an hour or more.—Mrs. T. E. Wilcox, Poway.

##### Boston Baked Beans or Pink Mexican Beans

Early Friday morning put two cups of beans to soak. While washing the breakfast dishes parboil with one teaspoon soda for ten minutes, drain, cover with cold water, drain again, cover with cold water and bring to a boil. Boil slowly, over the simmer burner or on the back of the stove, then if the pink bean is used, drain and rinse again, recover with water and bring to a boil again. This is to remove the strong taste. Then again bring to boil, transfer to the fireless cooker if you have one. If not keep on the back of the stove or over the simmer burner, until you are ready to prepare the supper Friday evening. Then cut one-quarter pound of pork into small pieces and stir in with the beans, mix two tablespoons of molasses, one-half teaspoon of mustard, and one teaspoon of salt, together with one cup hot water. Put this mixture together with three small onions, cut fine, with the beans and return to the fireless, using two radiators, and leave over night. Saturday morning bring the beans to a boil, adding more water if needed, and reheat the radiators and replace until noon. Stir the beans and repeat. The beans will be good for supper Saturday evening, but if instead the radiators and beans are reheated and left until after breakfast Sunday morning, and then the beans placed in a slow oven until noon the beans will be delicious. The longer beans are cooked the more delicious they become and also the more digestible.

If you have not a fireless cooker, leave the beans in the coal range oven over night, or if your gas oven has a lighter burner cook the beans with it only lighted, or put in a small portable oven placed over the simmer burner. The beans must cook slowly for 24 hours or more, adding water from time to time as necessary. Cooked in the gas or coal range ovens the dish should be kept covered until the last hour when it may be uncovered to allow the beans to brown. If you have an electric oven the beans may bake with the lower element turned on to low.—Margarette A. Walker, Anaheim.

##### NO ROAST BEEF FOR CHRISTMAS

Food Commissioner Merritt sends warning that the restrictions of meatless Tuesday will not be removed for Christmas or New Year, both of which fall on that day, according to a telegram received from Herbert C. Hoover.

The telegram was sent to clear up a widespread report that the ban would be lifted for the two holidays.

In addition, Hoover said that liver, tongue, tripe, kidney and other by-products of the prohibited meats come under the ruling applicable to meatless days, and that "plenty of variety is afforded in poultry, rabbits and seafoods."

The impression has been general in some sections that by-products could be sold on the meatless days.

##### TODAY'S BEST STORY

With the boundless enthusiasm of his kind, the food faddist harangued the mob on the marvelous results to be obtained from chewing soap and eating nut butter.

"Friends," he cried, swelling visibly and clapping his chest, "two years ago I was a walking skeleton—a haggard, miserable wreck. What do you suppose brought about this great change in me?"

He paused to see the effect of his words. Then a voice rose from among his listeners: "Wot change?"

To bake potatoes quickly, place them close together in the oven and cover with inverted pie plate.

## "—use foods that require less sugar"

THIS is one of the most important recommendations of the Food Administrator: "In cooking and baking use foods that require less sugar."

In other words—use Ghirardelli's. Use it freely and wisely—in place of other less nutritious and more expensive foods. Not only will you save money but you will help in food conservation.

Cooking and baking require less sugar when you use Ghirardelli's. Because—it contains in itself the sweetening flavor you need. More than this—it adds a new touch of richness to your icings, your puddings and other desserts.

In ½ lb., 1 lb. and 3 lb. cans; a tablespoonful—one cent's worth—makes a cup.

D. GHIRARDELLI CO.

former years. In fact, celery this year is 90 per cent as compared with 100 last year same date. Lettuce conditions are also under last year's.

Florida's truck crops are suffering from continued dry weather. Injury from frost has not been serious.

Shipments of potatoes have been much heavier than last year, in fact the increase is about 20 per cent, but the crop is estimated as approximately 50 per cent larger. The holding back is somewhat on the part of the growers, but more perhaps due to the shortage of cars. High grade Maine potatoes are now selling in the principal markets at \$1.80 to \$2.00 per hundred pounds.

Barreled New York apples are selling around \$5.00 and \$5.50. Northwestern boxed fruit in Eastern markets sold as low as \$1.50 and \$1.60. Cabbage market is proving exceptionally good. The stock selling around \$30 to \$35 f. o. b. Eastern points. Fancy Indian River grapefruit are selling from \$3.00 to \$5.75.

Cold storage holdings of turkeys are materially lower, in fact less than half those of last year same date. Decrease in other poultry is practically the same. Stocks of frozen beef are now greater than last year same date by 57.1 per cent. Frozen pork, salt and pickled pork and lard, however, all show a decrease of from 15 to 25 per cent.

Post card reports to the bureau of markets of the United States department of agriculture show shipments from California during the past week approximately as follows: Apples, 4 cars; cauliflower, 23; celery, 133; cabbage, 1; dried figs, 5; dried fruits, 94; grapes, 1; lettuce, 37; mixed fruits, 7; mixed vegetables, 45;

## Selecting Improved Bean Seed

NE of the fundamentals in better farming is the planting of the best seed obtainable. It is always difficult as well as expensive to buy improved or selected seed. It is yet more difficult to be sure that you are getting the variety you have paid for. Furthermore, in general, seed which is produced in other localities is not likely to yield as heavily as if it were grown where it is to be planted. Grow it yourself, then you know what you have, also you know it is suited to your locality.

It costs practically no more to grow improved strains, giving larger yields and more profit. The investment of land, capital and labor is about the same except for the larger harvest, which is welcomed. If 25 per cent is gained by using more productive seed it means adding that much to your income with the same acreage. Why plant poor seed or average seed when you can have better seed? A manufacturer wants the best machines he can find. You want the most up-to-

the selected seed in a special seed plot. From the special plot the best plants are again chosen for seed and the rest are sold for market beans. You will find that some plants which are high yielding this year may not have the power to transmit this characteristic next year.

### Plant to the Row Method

Select a piece of soil, level, even depth, texture and fertility.

Plant the product of each selected bean plant from the fall harvest in a separate row, putting a stake at each row with the number of the plant. Every fifth row plant unimproved seed so as to check soil variations.

Make a chart of the plot, showing the number of row and the number of the plant. This is done to prevent loss of record in case stakes are lost or broken.

Care for seed plot the same as the rest of field.

In the fall discard all rows which do not show a tendency to transmit high yield and uniform maturity.

Shorthorns Ready to Serve Their Country

olives, 1; onions, 10; potatoes, 34; raisins, 156; sweet potatoes, 10; tomatoes, 3.

Price of prime steers has materially declined, running around two cents lower than a couple of months ago. It has been reported that this was due to the holiday season and to the general campaign of food conservation.

Chicago reports swine trade lacking in stability notwithstanding heavy military contracts. Packers seem inclined to play with the market.

### PLOWING THE VINEYARD

The "Sun-Maid Herald" refers to one of the successful raisin producers who follows the practice of deep plowing, which he believes is cause of a fine crop of raisins every year. He says he plows seven inches deep, then cross plows the same depth. He adds:

"Some people think deep plowing injures the vines by breaking up the surface roots. As a matter of fact, the breaking up of the roots causes a bunch of new roots to sprout where the old were torn and promotes a healthy root growth. The first plowing should be done early, the first of March if possible, and more rain will be thus conserved. Thorough cultivation insures a mulch that will hold the moisture.

"But the time to begin deep plowing is when the vineyard is young. In this way the roots go down deep, and the vine does not have to depend on the surface roots for its vitality. If old vines have most of their roots close to the surface, deep plowing, of course, works an injury. In such vines shallow plowing is necessary."

date bean machines you can get; the ones which will manufacture the most beans per acre.

No wizardry is necessary in raising better seed. It is mainly a matter of actually doing certain things which anyone can perform. The methods here described for improving yield and quality by seed selection will help accomplish all these things.

### Plants to Select

During the growing season choose plants maturing about the same time with greatest number of full pods, but don't sacrifice quality for yield. The heavy bearing plants must have full-sized beans. As the plants are selected they should be marked with a stake or rag and carefully watched for time of maturity. You should select about 100 plants.

Select only special plants, but growing under normal conditions, as a group of good ones may be caused by superior soil. Plants from outside rows should not be chosen, as they are likely to be better ones from virtue of location.

Gather plants by hand and re-select the best ones again. It is much easier to get the best ones when you have them together for comparison.

Harvest by hand and weigh the product of each plant separately and put the seed in a heavy paper bag, giving each a number.

Keep a record of the number of mature pods and weight of product of each plant in permanent form.

### Seed Plot Method

This method consists of planting

Those plants which have the power to pass along their good points to future generations are valuable.

Before any are harvested select out again from the field the best plants and continue as before.

Harvest and weigh the product of each row separately and plant the next crop from those rows which show the greatest yield per 100 feet of row. Discard the low yielders.

This method of selection may be continued with profit, year after year. Probably no piece of farm work will pay better returns than the time spent in the fall in seed selection. No special work has ever been done in the selection of bean seed, and inasmuch as the demand for good seed is ever increasing and it takes several years to begin to realize on your efforts, no one can get ahead of you if you start now. There may be a fortune in it for you.

### SODA LYE NO REMEDY FOR HOG WORMS

Soda lye has no value as a remedy for or preventive against worms infesting hogs, nor is it likely to be of value against similar intestinal parasites in other animals, according to the United States department of agriculture. Hogs were fed daily with the soda lye mixed in their food in accordance with the directions printed on label of the sample tested. As a result it was found that hogs remained infested throughout the period of treatment—2½ months—and that the extent of infestation was increased rather than decreased.

# Poultry can be made to Pay

THERE are two methods of gaining knowledge, necessary to make poultry a success; experience—which is a long, drawn out, expensive road and the one too commonly used. Another method is by the careful studying of books written by practical poultry people who have made mistakes and successes and are willing to give this information in order that you may take the short road to poultry success.

## Poultry for Profit

BY

Jean A. Koethen

[Graduate of University of Calif.]

Gives more practical knowledge of every branch of the poultry business in a more concise and simple manner than any similar book published. With the knowledge gained by a study of this work experience in the poultry business is not as necessary. Through its guidance obstacles are overcome before it is too late.

The book is 5½x8 inches and contains 12 chapters, with over 225 pages of text and 18 pages of illustrations, printed on egg-shell book, binding full cloth vellum de luxe.

## GIANT FARM POWDERS

STUMPING — AGRICULTURAL

Here are the subjects of the books that are sent FREE:

**Stumps** 24 pages, 23 illustrations. Explains and shows the most effective methods of blasting. Tells you how to get out stumps of any size cleaner, easier and cheaper by using either of the Giant Farm Powders—Eureka Stumping Powder for dry work and Giant Stumping Powder for wet work.

**Boulders** Shows how to place charges for stone blasting. Gives amount of Giant Powder required to break up stones of various sizes.

**Crops** No deep plowing or cultivation is half so effective as subsoiling with the Giant Farm Powders. If you believe in tillage you believe in subsoil blasting. Ask for the Giant Subsoiling book, "Better Farm Tillage."

**Trees** Trees in blasted beds develop twice the root systems of trees in unblasted soil. They have the loosened earth and the food needed to do it. In blasted soil, rains and irrigation water sink down many feet and there is no surface run-off. The Giant Tree book, "Better Orchard Tillage," gives complete direc-

tions for orchard soil improvement.

**Ditches** You can blast out clean, deep ditches with Giant Powders. The sides will be sharp and even. The Giant Book, "Better Ditching," tells how to do it.

### Mail the Coupon

## The Farmer's Concrete Mixer SHELDON Batch Mixer Price \$11.50 Up

The Sheldon was designed especially for the farm. Highly praised by users. Farmers everywhere call it the ideal mixer. Used today all over the United States. A big success. Small enough to be easily moved—big enough to keep 6 men busy. Low in price. Build your own silo, tanks, troughs, floors, foundations, buildings, etc., out of concrete with a Sheldon Batch Mixer.

### Read What These Sheldon Owners Say

I and my hired man laid a feeding floor for my hogs, 2x24, in one day; also put floor in my cow barn. My neighbor liked it so well I am not able to keep it at home. ANTHONY CHRISTENSEN, Hancock, Minn., Rt. 1.

We have used the mixer during past year for putting in cement foundations for a complete set of farm buildings, including silo, and liked very much. DANA WILBUR, Jamestown, N. D.

Last year I bought a cement mixer from you with which I am well satisfied. It did not take long for it to pay for itself and I surely can recommend it to anyone needing a big mixer at a small price. W. J. JAMES, Martin, Ill.

I am more than busy with my Sheldon Concrete Mixer. Have more work than I can do. I get \$10 a day when I work out. JAMES L. WIRRA, Wellsville, N. Y.

The machine works fine. Have already got the job of mixing concrete for the bridges in this township. JOHN ROSS, Sparksburg, Pennsylvania.

Last spring we purchased of you a set of castings to make a concrete mixer. It was constructed per the plans furnished and it duly worked great. D. M. BARNARD, Freeport, Ill.

## FREE PLANS

Make your own concrete mixer. You can do it at a cost so low you can not afford to mix concrete by the shovel method. Along with our iron parts we send Free Plans and permit for making your own machine. A good way to get a practical mixer at a small expense. Or, we will sell you the complete machine, ready built.

**Make Big Money at Concreting** If you buy a Sheldon Mixer for your own use, you can make many times its cost in a season by renting it to your neighbors. Or, if you want to go out with the mixer on contracts, you can easily earn \$8 to \$20 a day. Our customers are doing it right now. The jobs go to the man with a Sheldon Mixer every time.

**Write For Our New FREE Catalog** Shows our full line of mixers which are sold direct to you on strong guarantee. Thirty days trial privilege. No other like it. Patented. Two styles, hand and power. Mixes 2-12 cubic feet a minute. One man can operate it, but it will keep 2, 3, 4, 5 or 6 men busy. Continuous chain drive. Tipping dump. Easily and quickly moved. All parts guaranteed. Does work equal to \$400 mixers. Be sure to get the catalog. Write today.

**SHELDON MANUFACTURING COMPANY, Box 897, Nehawka, Neb.**

### We Ship Direct from San Francisco

We have just warehoused a carload of Sheldon Mixers in San Francisco to save you freight and time—can deliver your Mixer in three days if necessary.

No Long Wait—Lowest Freight

The Sheldon will pay for itself on first small job. Takes the backbone out of concrete. Makes possible those many small improvements that add so much to the value of your land.

## Nature Does Her Patriotic Bit in Production

Studying Truck Crop Bugs

The sign above the doorway reads: "U. S. Department of Agriculture Bureau of Entomology Truck Crop Insect Investigations." The gentlemen standing on the steps are: By the flag pole, R. E. Campbell, in charge; on the lower step, hands in pocket, H. J. Ryan, engaged in field investigations.

Bug Eat Bug Encouraged and Artificial Methods Also Studied at Three Institutions in Los Angeles County. Interesting Photos and Notes by A. Layman. Also Insect Illustrations from the State Horticultural Commission.

Woglum's Headquarters

The bureau of entomology has continued Mr. Woglum's work in Southern California for many years. He was first located at Whittier, later at Pasadena, now for some months in the building shown above, North Curtis Avenue, Alhambra.

INSECT and fungus troubles of food producers are costing the producers (and incidentally the consumers) millions of dollars. This fact has been fully appreciated for a great many years and we doubt not the oldest of us may recall tramping along the rows of potatoes in the old garden, knocking off the "old fashioned" potato bug into water with a scum of oil on top in the endeavor to save dad's spuds. Later came the Colorado potato beetle, and we have all had it in for Colorado ever since. Of course we used the paddle to knock off the bugs and of course it was our duty to tear off a portion of the leaf on which the egg mass was deposited. Later the whisk broom with bucket of Paris green solution made rather swifter work, though not always so positive in results. Instead of Paris green in water some mixed it with flour or fine lime dust and sifted it over the plants from coarse mesh cloth bags.

Still, bugs are with us and have raised national and even international questions. Many counties and even states have complained because of the rigid quarantines and regulations

which have prevented or at least endeavored to prevent the spread of these pests.

California has led the world in investigation and in police regulations for many years, but it began all too late, for our worst pests in orchard and field today are those brought from

other countries. Now, how shall more of these pests be kept out and how may we best control those already here? Hundreds of different forces are being used. As an illustration see engravings on this and other pages, or, better, take a walk from the car line running between Los Angeles

and Monrovia in the San Gabriel Valley, and within two blocks of each other are three establishments maintained by the state of California and the United States, which are all brought into being because of a desire to aid the producers of California.

The oldest in time of location of these three institutions is that of the bureau of entomology in charge of R. S. Woglum, special field agent. Mr. Woglum has been in California many years, sent here first to make fumigation investigations. These investigations were taken up at Whittier and many other citrus crop sections. In 1917 extended reports were made through the bureau of entomology which have aided very greatly in the furtherance of fumigation work. More recently Mr. Woglum's work was directed from headquarters at Pasadena which were moved to the center of an orange section on North Curtis Avenue, Alhambra. Mr. Woglum's work has been more to secure control of insects by the use of the spray pump or fumigation tent.

A few months ago State Horticultural Commissioner Hecke was appealed to to aid in the control of the

Continued on Page 654

The Citrophilus Mealybug

Many of the farmers are well enough acquainted that this pest is often referred to as simply "Citri." His official title is, however, Pseudococcus Citrophilus.

Worthless Fruit

The citrus mealybug as it affects and ruins lemons.

Breeding Cages

In these cages are fruits and twigs infested with mealybugs on which are feeding predaceous insects, or, which are being parasitized.

State Insectary, in the Office

The state insectary recently established in Southern California is on North Olive Street, Alhambra, Los Angeles County. It is maintained by and under the general direction of the state commission of horticulture, and, as may be noted in the engraving, is well fitted to perform its work.

## Melaxuma of the Walnut

NE of the dread diseases of the walnut orchard is melaxuma. Notwithstanding, it is easily controlled, but its control is a case of "a stitch in time." We quote from bulletin by Prof. H. S. Fawcett. This was written after experiments were performed by Prof. Fawcett in 1915, but is still the best information there is on this subject.

This disease, known as Melaxuma, which occurs in the form of black cankers in the crotches and limbs, and occasionally in the form of a sudden wilting and dying of the branches, has been noticed by walnut growers in Santa Barbara County for a number of years (at least since 1909), but has only attracted serious attention during the past two or three years.

Because of the oozing of dark watery material to the surface of affected areas, this disease is often confused, under the name of "black sap," with sunburn, frost injury, injuries to the bark in cultivation, injury from the decay of wood at places where limbs have been cut off, and other troubles in which a "black sap" may ooze out during the active growing period of the tree. It should not be taken for granted, therefore, that because a black ooze is seen on the trunk or larger limbs of a walnut tree that Melaxuma is necessarily present.

As the term "black sap" has already been used by R. E. Smith to designate a result of sunburning, this name was not considered suitable for the disease here being considered. The word Melaxuma, derived from two Greek words meaning "black" and "juice," was therefore adopted and is now in fairly common use to designate the disease herein described.

### Treatment Suggested

From the observations and results of experiments so far made, the following tentative treatment is suggested:

Cut out the cankers that have not gone too far on the trunk and larger limbs and disinfect the wounds thus made. The dead and discolored bark should be cut away, getting a little beyond the margin of dead tissue. If the cankers are not large and the wood underneath has not been stained deeply, it will pay to dissect out all the discolored wood as well as the bark. Probably one of the best disinfectants to apply to the wound is the Bordeaux paste. If the canker is large and has been in the tree a long time, the wood may be stained so deep as to render the work of cutting out all discolored wood too expensive. If the canker has practically girdled the limb, the limb had better be cut out. Limbs not so seriously affected can probably be saved for a number of years by cutting back into the healthy bark around the edge of the killed area, either with or without cutting out the discolored wood, and disinfecting it. It would be safer, if expense in time is not too great, to also dissect out the stained wood, especially if this has begun to soften and decay. Trees should be treated when the areas are starting. Some weeks or months later after it is seen that the progress of the canker is stopped and the bark is healing at the cut edges, the exposed wood should be covered with asphalt paint. If the Bordeaux paste has not been washed away by that time or has not largely peeled off from the wood, the excess may be removed with a wire brush before applying the paint.

The limbs with cankers too large to be treated, as well as the limbs already dead, should be pruned out with a saw or pruning shears, making smooth cuts and leaving no stubs. An ax should not be used in pruning. The larger cuts, one inch or larger, may be disinfected with corrosive sublimate, 1-1000 parts of water, and painted with asphalt paint or other good covering. The Bordeaux paste is apparently not so good to use on the cuts made in pruning out limbs.

As an added preventive against the development of new cankers in the future, the entire trunks and the crotches of all trees in the orchard (both affected and non-affected) may be painted with Bordeaux paste at small expense per tree. It must be borne in mind in this connection that some new cankers will undoubtedly make their appearance after painting with Bordeaux paste. They will have started unnoticed, the fungus having already gotten into or through the bark before the Bordeaux paste was applied. After a year or two when all these have been worked out, the application of Bordeaux paste ought to prevent new ones from forming, except where severe injuries have been made.

All injuries to the bark in cultivating the orchards should be avoided. The injury inflicted on the trunks of walnut trees in some orchards in plowing and cultivating is inexcusable. It is a common sight in some orchards to see every third or fourth tree trunk with a large patch of bark torn or wounded by parts of the harness or the edge of the plow, and to see the lower limbs with bark torn off by the harness of the passing team. All these injuries are ideal places for the Melaxuma fungus to enter and start a canker.

If willows are growing along the edges of a walnut orchard, it would be well to destroy them or, in case they are useful in keeping the soil from washing, to keep them cut back every year or two. The young healthy shoots do not seem to be as subject to the disease as older, larger limbs.

### Bordeaux Paste

The formula for Bordeaux paste is as follows: 12 pounds of bluestone (copper sulphate) dissolved in eight gallons of water in a wooden, earthen or glass vessel; and 24 pounds of quick-lime slaked in eight gallons of water. When the lime is cool, stir together about equal parts by volume of each for making enough mixture to last for one day only. The bluestone is easiest dissolved by suspending it in a sack at the top of the water over night. If the bluestone is pulverized and suspended in warm water it dissolves rapidly. Good lime that is not air-slaked should be used, and after slaking it with the water it should be allowed to cool before being used in making paste. If covered to avoid evaporation each ingredient will keep indefinitely, but after mixing, the paste slowly deteriorates. Where it is being used over a number of days or weeks, just enough of the wet slaked lime and the bluestone solution should be mixed to make paste enough to last for one day, leaving the remainder unmixed in separate vessels. It may be applied with large brushes, as is whitewash.

### Asphalt Paint

Good asphalt paint free from impurities may be made by dissolving hard asphalt in benzine or gasoline until it

## Now's the Time

to get in your dormant or winter spraying. If done properly—this will prevent the accumulation of certain insect and fungus enemies; will clean your trees and soften the bark; and will keep the trees in better health, vigor and fruitfulness. For this purpose there is nothing so effective as

has body enough to form a good covering when applied with the brush. The hard asphalt may either be broken into small pieces and dissolved in the benzine, or the asphalt may first be melted by heating, and after it has been taken from the fire and cooled down somewhat, but not enough to

harden again, the benzine poured in and stirred.

Asphalt paint dissolved in benzine and put up in cans ready for use, can usually be purchased at paint shops or hardware stores. A similar article dissolved in turpentine is also on the market, but it is not suitable for use on tree wounds.

## Pollination of Fruits

SERIES of experiments has been conducted at the John Innes Horticultural Commission at Surrey, England, to determine which varieties of fruit trees are self-fertile and which self-sterile. These experiments were reported in the Journal of Heredity of Washington, D. C., by L. G. Currie, and while of little value to California growers because so few of the varieties are grown here, yet it is a most interesting report of the English experiment. The trees were grown in an enclosure where insects were not a factor in any way in the pollination. The fruits reported are:

### Plums

**Self Fertile**—Denniston's Superb, Early Mirabelle, Reine Claude Violette, Myrphalan (red), La Prune Geante, Monarch, Early Transparent, Reine Claude Bavay, Prince Engelbert, Early Favorite, Gisborne's, Oullin's Golden Gage, Golden Transparent, Victoria, Czar, Pershore, Magnum Bonum (red), Magnum Bonum (white), Kentish, Warwickshire Drooper, Damson var's.

**Self Sterile**—Coe's Golden Drop, Coe's Violet, Wyedale, Grand Duke, Jefferson, Reine Claude d'Althan, Pond's Seedling, Washington, Early Greengage, Old Greengage, Ickworth Imperatrice, Late Transparent, Curlew, Prune d'Agen, River's Early Prolific, Stint, Mallard. The last three set only about 1 per cent when selfed.

### CHERRIES.

**Self-Fertile**—Morello, Late Duke.

**Self-Sterile**—Black Heart, White Heart, Elton, Kentish, Big Frogmore Early, Big Gaboulay, Early Rivers, Guigne d'Annonay, Black Tartarian.

## Going to China

Professor C. W. Woodworth, of the University of California has been granted a year's leave of absence and goes this week to China where he will give a year of service to the University of Nankin, or rather the agricultural and forestry department of the university. This college of agriculture is by far the largest and best equipped of any of its kind in the Chinese Republic. The dean of the college is Dr. Balie, and he has arranged with Professor Woodworth for this year of service. One of the most important branches of the work of the college has been that of forestry, for many of the Chinese recognize the fact that China's floods may be in a measure at least controlled by intelligent forestry. Many of the students and instructors of the institution are now aiding in the first great highway to be built in China which runs from Peking to Tientsin. Professor Woodworth will give to Cultivator readers some information as to things entomological in China. For 4000 years these people have grown crops and, as Dr. F. H. King in "Farmers of 40 Centuries" has shown us in a measure how soils are handled to keep them producing for thousands of years, Professor Woodworth expects to determine how the insect problem is kept in control

without insecticides, or control measures at least as we know them in America.

### SCHOOL LANDS

W. S. Kingsbury, surveyor general of California, states that there are 811,810 acres of vacant school lands in 48 counties of this state, subject to lease by anyone wishing to grow crops. Information regarding these may be had by writing the Surveyor General, Sacramento, for the pamphlet and information regarding filing fees. There are some counties which have no school lands. Amongst these are Alameda, Contra Costa, Kings, Marin, Orange, Sacramento, San Francisco, San Joaquin, San Mateo and Sutter. San Bernardino has the greatest number of acres, 252,685; Merced, the lowest, 20.6.

### HANDLING APPLES

Apple growers will be interested in Bulletin No. 587, which may be had at 15 cents per copy from Department of Agriculture, Washington, D. C.

It touches upon the Handling and Storage of Apples in the Pacific Northwest. Pomologist H. J. Ramsey, formerly located at the pathological laboratory at Whittier, and now pomologist in charge of fruit handling and storage investigations, is the author. The bulletin treats upon the importance of cold storage, functions, various experiments, maturity, harvesting, handling, temperatures, keeping qualities of varieties with some beautiful colored plates.

## TEAGUE QUALITY CITRUS TREES

AWARDED THE GOLD MEDAL AT FOUR INTERNATIONAL EXPOSITIONS.

For Productive values, fine quality of fruit and vigorous growth Teague's bud-selected, (pedigreed) properly trained and carefully handled orange and lemon, pomelo and lime trees are the trees to plant. An experience covering a third of a century warrants the assertion that Teague Quality Citrus Trees possess these qualifications in a superlative degree. All the standard commercial sorts, and garden and ornamental varieties; the largest assortment of citrus trees in America. . . . We invite correspondence from intending planters. . . . Consultations on citrus planting by appointment. 1918 Price list just out; send for a copy.

citrus mealybug which is seriously threatening the orange sections. The excellent work of the state insectary at Sacramento in charge of Harry S. Smith suggested that a branch of that work might well be maintained in Los Angeles. A cottage was secured on North Olive Street a short block from that which has been Mr. Woglum's headquarters. C. P. Clausen was made director. Mr. Clausen has

C. P. Clausen

Mr. Clausen is assistant superintendent and director of the insectary located at Alhambra.

studied citrus mealybugs for years, and the work assigned to him was the study of this pest of the citrus trees.

In 1913 Mr. Clausen was with the United States department of agriculture, in 1914 with the citrus experiment station, and later spent 1½ years in the Orient investigating and collecting parasites of the mealybug. Commissioner Hecke could have assigned no one better qualified to take up this work for citrus growers of California.

Mealybugs were at one time "nothing but mealybugs." It's different now. They're genuine Prussians of the insect world, hence we go after them in "tanks."

There are various members of the family. Four are important; Pseudococcus citri Risso, P. (which means Pseudococcus) Bakeri Essig, citrophilus Clausen and P. Longispinus Targ. The first named, citri, is the kaiser of the bunch from the citrus grower's standpoint. From the layman's standpoint they all look alike. However, ask Clausen.

Years ago we tried fumigating mealybugs. Two fumigations, each double strength, killed some; others said; "Pretty well, thank you." Spraying with Essig's carbolic spray stunk the life out of some—still they increased. (Claremont Pomological Club held a great conference in 1909 and issued a bulletin, at Ontario later another conference. Still they increased and are still increasing.

Now, bug eat bug is considered to have more possibilities of effective results. So Clausen, with E. J. Brangan and Chas. A. Perrin, use 1000

pounds of potatoes a month for "pasture" for mealybugs and then "pasture" other bugs on the mealybugs. When these "other bugs," Brown Lacewing, Green Lacewing, Lepomastix Cryptolaemus Scymnus (there are three or four of that scymnus family) and a few others are bred up so the station has a few billions of them they will be distributed to orchardists—sort of liberty loan—in the hope that they will eat other billions of mealybugs.

They are promising little beggars—beggars for a chance—and the insectary will give them a chance. Another year and we will know more.

Meantime Prof. Woglum of the tropical and subtropical investigations of the United States department is studying artificial control.

Strength to the arm of all these helpers.

### CITRUS TREE FUMIGATION

Written for California Cultivator  
By J. L. Matthews of Covina Argus

IN THE capacity of innocent bystander, or interested observer, roofer-from-the-side-lines, or whatever you choose to call the relation of the newspaper man in a citrus district to the rancher, I have watched the progress of this business of fumigating citrus trees for over 20 years, during which time I have printed the opinions of others, had something to say in a superficial way myself and listened to much talk and conjecture about fumigation. In actual experience I never fumigated a citrus tree, nor had one fumigated for me, but I have lived in the thick of the fumes of cyanogen gas every fall and winter since the time when the east end of Los Angeles County became an important citrus district, and there are some obvious conclusions that cannot be escaped.

I have seen the fumigating process

Larva of Scymnus Bipunctatus Kug

However, the two oval shaped bugs are mealybugs, while the "Scymnus" is just preparing to make them one meal. Note the resemblance between this ladybird larva and the mealybugs.

ses change and improve, and I have seen the necessity for fumigation increase from three-year periods of fumigation to two-year periods, and lately to one-year periods. The citrus rancher knows the value of fumigation, and in Los Angeles County he is coming to realize that fumigation must be done thoroughly every year. But you will be surprised to know, for instance, that in some big associations of ranchers in Los Angeles County, otherwise intelligent and up-to-the-minute in the citrus business, there is sometimes as high as 40 per cent of the acreage that will skip a fumigation, in the very face of the fact that it is

Bug House "Pasture"

The rough cull lemons in the foreground are, many of them, one mass of mealybugs and the cottony material discarded. In the background are flats holding potatoes which have been sprouted. These tender young sprouts make excellent feeding ground for the mealybugs. These mealybugs are used as feed for the beneficial insects.

proven beyond all doubt that this means practically the loss of a crop.

And I recently made an investigation over various parts of the state in the citrus districts, for the reason that I was puzzled to think that, although it is a demonstrated fact that fumigation is necessary, it is not always done when it should be done—in other words every year. And that's how I came to realize what a tremendous amount of significance the banker has in this matter of fumigation.

If a hard pressed citrus grower went to his banker who held a mortgage on his property and told him that he had no money with which to buy irrigating water for his ranch, the banker would immediately have a mental picture of that ranch becoming a dead and dry and valueless thing unless the

*Cryptolaemus Montrouzieri* Mites

This bug is not half as large as he looks to the mealybug which he attacks, but this engraving is vastly enlarged, for the bug himself is even smaller than one of his eyes appear in this engraving.

irrigating water was forthcoming. And to protect the loan on that property the money for shares of water stock would be forthcoming at once.

Now that is exactly the situation that is partly coming about, and must be entirely brought about concerning the banker and the subject of fumigation. If the ranch is not fumigated the crop does not set, and there is no money to be had that year. The case is worse than in the case of the lack of irrigating water, for if a rancher irrigates and fertilizes he is out just that much money when in failing to fumigate he loses his crop. If he did not irrigate he would not fertilize nor fumigate nor prune nor improve in any way and therefore would not be out any overhead expenses except taxation. But if he pays all the overhead or cultural expenses faithfully and does not fumigate, thereby losing his crop, he is more deeply in the hole than any other blunder can put him.

In Covina we know that the expenditure of from three to five hundred dollars for fumigation assures the marketing of perhaps from \$3000 to \$4000 worth of fruit, other things being favorable. This then, should bring its obvious lesson. But unfortunately it is not always possible for the rancher to fumigate. Some of them started in the business with insufficient capital. A freeze will put that kind of a rancher temporarily up against it and permanently out of the business if he

The Lacewing

This is the adult of the brown lacewing fly. One valuable feature of this beneficial insect is that, while in the larval and adult stages, it destroys the mealybug.

can't get finances. A hot wave in the summer may cut his normal crop in half. The Southern Californian has to cope with crop failures or partial failures just as does the Nebraska farmer or the tiller of the soil anywhere. So then this matter must come directly up to the banker.

In the city of Los Angeles, and in some other communities in Southern California, we find the big banker, and sometimes the little banker, very much averse to lending the proper

amount of money on a citrus grove, and when pinned down to an admission he says that citrus groves in the aggregate are not first-class risks. Particularly specified groves, owned by certain men, are good risks, they say, but as a matter of fact these men do not need loans nor do they often ask for them because they take very intelligent care of the orchards and have capital with which to continue the care. That shows where the problem lies. Such bankers, who do not have an intimate knowledge of the business, will allow a ranch upon which they hold a mortgage to deteriorate until it isn't worth the mortgage, and then on the strength of the experience will put a general statement of poor risk up against the industry as a whole. This isn't just an offhand statement—it's a fact that is being demonstrated every day.

The low loaning rate on citrus groves recently set by the federal loan banks was brought about because the experts for the federal institutions took all their information concerning citrus groves from the big city bankers, who, to be frank, don't know anything about the earning capacity or the value of citrus groves.

We find an altogether different kind of banker here and there, as I did when talking with President John H. Bartle of the Monrovia First National Bank, who said that the first consideration in loaning money on citrus property with him was whether or not the rancher had thoroughly convinced himself of the need for annual fumigation in Los Angeles County, secondly, that he had generous ideas about fertilizing the soil, and thirdly, but by no means of latter consideration, that he intended to use the loan for the purpose of fumigating, fertilizing and improving his ranch.

W. R. Powell of Azusa, for more than 30 years at the head of the First National Bank of that community, said that he had adopted a policy years ago of establishing a loan through a savings account, and when the rancher had contracted his bills for fumigation, fertilization and other necessary cultural work, these bills were sent to the bank and paid from this non-checking account. In this

*Hyperaspis*, a Valuable  
Native Mealybug Enemy

fashion the bank was able to keep a record of what the loan was spent for, or in other words, that it was spent for the work actually needed and not for a new bungalow or an automobile. The bank is carrying a number of fumigation accounts of this character this year.

In Whittier the banks of that locality say that very few cases are known of bad management of groves, for that particularly favored community has prospered in the citrus business from the first, but the same cultural questions are asked of any man who wishes loans on his citrus property. The mortgages give them power to administer good cultural care, including annual fumigation, if the owner fails to do so. The most difficult properties to keep up in this respect are estates that are going through certain court processes. The citrus ranch that is the estate of somebody, or which is run on the absent treatment plan by some person who lives in New York or Canada, is the hardest proposition from the cultural standpoint, for it is impossible to educate the owner to such expenditures as fumigation and essential cultural needs.

In Porterville and Lindsay there are several bankers who are themselves owners of large acreages in oranges, lemons and grapefruit, and these men are perhaps the best educated bankers as relates to the citrus business to be found in the state. While their need is not so insistent in the matter of fumigation as is the case in Los Angeles County, these banker-growers are sure that the time has practically

arrived when annual fumigation should be practiced, and they most emphatically place the necessity for adequate and thorough scale eradication above all other cultural essentials. Among those I have talked with on this subject have been H. C. Carr, vice-president and manager of the First National Bank at Porterville; G. V. Reed, cashier of the First National Bank of Lindsay; Chester Dowell, cashier of the Lindsay National; King G. Gillette, president of the Pioneer Bank of Porterville. These men do not quarrel with facts. They fumigate their own properties and insist that those ranchers who do business with them understand also its necessity.

If you talk with Colonel H. F. Bray of the Porterville Lumber Company, as I did, an owner of 27 acres of oranges and a resident of the community since 1878, you will find a man who will submit to no argument about the necessity for constant fumigation, or W. E. Sprott, manager of the Porterville Fruit Exchange; W. S. Shippey, manager of several packing houses in the Sunland district; A. S. Rider, manager of the Central California Fruit Exchange. In the Porterville and Lindsay districts an annual fumigation thoroughly done causes the fruit to ripen quicker than where it is not done, according to T. E. Anderson, manager of the Lindsay Fruit Association. The fruit has a better chance to make a quick journey to maturity, freed from insect impediment which

weakens the life of the tree. And early fruit is a condition much sought after in that district.

In the Southern California district almost any large successful grower will allow himself to be quoted emphatically in favor of annual fumigation, as has C. C. Chapman of Old Mission groves at Placentia. Mr. Chapman says that in all his experiments with dozens of kinds of spray materials he never once had made a success of any of them. There is but one way to control black scale so far, and that is with cyanogen gas.

In fact, it is not the successful grower or the intelligent citrus community banker who needs to be convinced of this fundamental fact of the business; it is the outside big-city banker and the grower who has come into the state recently or who has a poor ability to absorb the essentials of any problem.

If you fumigate you get a crop, all other things being favorable. If you don't fumigate you don't get a crop.

#### CITRUS INDUSTRY IN ARIZONA

Written for California Cultivator  
By M. E. Bemis

O a lesser degree the same conditions which affected the citrus fruit in California this year have resulted in a smaller crop in Arizona. A few extremely hot days in June caused a rather heavy drop, and the crop

## Fruit Trees

As we specialize in fruit bearing trees, we are in a better position perhaps than anyone else to take care of your requirements. Hundreds and hundreds of fruit growers, who have made a big success in this state and "who know," will send their orders to us.

Why not buy the cleanest, healthiest, best-rooted, most vigorous trees obtainable, grown under the most advantageous conditions, where climate, soil and water are conducive to the highest efficiency in tree culture.

## GROWERS Made Big Money This Last Year From Peaches and Apricots

We are at present in a position to fill either small or large orders for Muir and Lovell Peach Trees and Tilton and Blenheim Apricot Trees.

This condition may not prevail later in the season, so we would suggest that if you have in mind planting these varieties, that you order as soon as you can conveniently do so. The demand for all varieties of trees this year will be heavy.

# Spraying is Too Important

Don't Buy  
the Wrong  
Machine

Spraying is too important to permit experiments with sprayers. A sprayer is ineffective not only when it sprays poorly, but when it is time-wasting and troublesome.

Bean Power Sprayers have cut spraying costs to the minimum and eliminated troubles. Bean Spraying machines—the leading kind for 33 years—are the most effective ever built. The famous Bean Power Sprayer is the choice of leading fruit growers the world over. This machine holds top place in its line simply because it gives an incomparable service.

**Bean POWER SPRAYER**  
*The 10-point sprayer*

Write for the catalog today. Learn about Bean patented features—advantages that have kept it in the lead; the Bean Pressure Regulator; the elimination of stuffing boxes; and other time-and-trouble-saving short cuts to cheaper and better work. There are ten points wherein the Bean excels. You want to know them all. Spraying is too important not to get the best sprayer. Send us the coupon today.

## Garden Art

Written for California Cultivator by Ernest Branton

**W**E PRATE so much of art that some will ask what it is and how they may recognize it in park or garden. The only answer is, that art is truth, or truthful portrayal of things as they are found in nature. There is no such thing possible as originality; it is of the highest if it be faithful reproduction. New combinations may be made, and in this way only may originality be expressed; the fundamentals are as old as the world.

In gardens we often see parts daubed with colors like a cheap advertisement on a bill board. Why not make it so if there is commercial value in it? I do not find fault with my friend because the gaudy dabs of color on his terrace front spell "Hotel Raymond," for such display has a commercial value. But why should a private garden have meaningless and shapeless dabs of the same colors on its front terrace? Is fidelity to nature therein or thereby expressed? Why not use one-half or one-fourth as many colors but in a like number of plants, all disposed in natural zones of one color or kind to a zone and to include all of each kind in that zone? That is the natural way. And nature is at all times simplicity and dignity, for the two are inseparable, and one cannot be attained without the other.

Prof. L. H. Bailey, noted world-wide for his good taste and judgment, says: "Every yard should be a picture. That is, the area should be set off from every other area, and it should have such a character that the observer catches its entire effect and purpose without stopping to analyze its parts. The yard should be made one thing, one area, with every feature contributing its part to one strong and homogeneous effect. . . . The fact is, the easiest way to spoil a good lawn is to put a flower bed on it; and the most effective way to show off flowers to least advantage is to plant them in a bed of greensward."

Yet there be those who would spoil fine stretches of lawn with beds that look like colored advertisements, and arrest the eye midway, whereas the view should be across the beautiful carpet of green with a border beyond of the same flowers; in the latter case a fitting frame and finish to a beautiful and unviolated stretch of greensward. Such a faultless mantle of green spreads over one corner of a Los Angeles park, yet when as a park commissioner I had a circular bed of pansies removed from its fair face, nearby residents protested that its beauty was destroyed. This bed, viewed from windows of adjacent apartment houses, looked very much like a metal cap from a gigantic beer or soda water bottle. It is cause for wonderment that no one suggested that the flowers be so arranged as to form an appropriate design and the space rented to a brewery for advertising purposes. Such designing may do for rugs and tiles but not for greenswards; yet if not art in the park or garden, it is not art at all, for the rules of art are everywhere the same, and the fine carpet or rug is a plain broad expanse of one color, surrounded by an appropriate border. It does not have to have rosettes, pin-wheels, transfer designs for easter eggs, or other tomfoolery, scattered over its fair infield.

### Near-eucalypts

There are two groups of trees, not

common in California, yet somewhat grown here, that are closely allied to and much resemble the eucalypts. They are the syncarpia and the angophoras. The timber of both is softer than that of the eucalypts, but the trees have other uses, yet are used for lumber also. The syncarpia wood is soft and brittle but extensively used for flooring and furniture where strength and toughness are not needed. Angophora wood is harder and much tougher. The tree is also closer or thicker in the top and thus is much better for a shade tree than the average eucalypt. In Australia they are used for street planting.

### The Tulip Tree

No tree native to the Eastern part of our country thrives more splendidly in California than *Liriodendron tulipifera*, the tulip tree. In South Pasadena are two giant trees of wide spread, planted by the late H. N. Rust. In South Park, in Los Angeles, there are large tulip trees in the lawns, and during the present summer they bloomed profusely. At the same time they were unsurpassed in foliage by any tree in the park. They are well-nigh perfect in form for shade purposes and were they only evergreens would surpass in usefulness any shade tree we have.

### The Horse-tail Tree

*Casuarina equisetifolia*, the horse-tail tree, will grow in pure sand. It is a splendid tree for fuel purposes, but is not without ornamental value. There is little doubt but it will thrive in beach sand closer to salt water than any other evergreen tree. This should be its main use in California, and hundreds of thousands should be planted close to the coast. Strange to relate, it is also drouth-resistant to a remarkable degree and many may be found in poor sand or gravel at considerable distances from the coast. I have never seen one of these trees that appeared to be stunted or in poor vigor or health. We should use many more of them, and over a greater range of soils and territory.

### THE PINK TECOMA

Miss K. O. Sessions, the well-known horticulturist of San Diego, writes in the California Garden on the pink Tecoma:

There is conspicuous about the city the Tecoma Mackenii, a native of South Africa, a very satisfactory vine for huge growth and free bloom during the summer. It blossoms best after rather severe pruning and can be grown as a shrub, tied up to a tall and heavy stake, or old tree, and severely pruned.

As a vine the shoots will grow easily 100 feet and have grown 300. It is fine for a high fence, a roof cover of a shed or barn, a pergola or pergola arch, or a summer house. It grows easily by layering, also from cuttings.

It is very unusual to find a vine the Tecoma "Queen of Sheba," which has similar foliage and darker pink that has so decided a complement in flowers and blooms from December to March. This vine is even more wonderful in its growth than the summer Tecoma. It could easily cover an acre.

A million mulberry cuttings are being planted on a thousand acre silk farm near Wyandotte, Butte County.

Many Flowering Millet

In our issue of November 3 we referred to a new grass which has been tried for some years on the ranch of Mr. Stead in San Diego County. The botanical name is *Oryzopsis Milaceae*. Another subscriber, Mr. Galloway of Galloway Bros., now brings to the office stalks of the grass and young plants showing habit of growth. The stalks of the dry and fully ripened grass are somewhat woody but he assures us stock will eat it up entire.

The botanical name of the grass means "Many Flowering Millet," but it is also called Indian Millet, Spreading Millet, San Diego Grass, and in the former article it was referred to as "Smilo."

The plant grows readily from seed or may be laminated or even grown from cuttings. The more satisfactory way is perhaps to scatter seed over

the hillside. The grass is so hardy that it will take root during the rainy season and if it becomes thoroughly established it lives through the summer, resisting the drouth and making excellent hillside pasture.

If California needs one thing more than any other it is a good pasture grass. This has been tried in California for something like 30 years, and perhaps it may now receive tardy recognition. In any case, from the reports of these who have grown it, it is worth giving a limited trial.

The seed is very small and so far as any has been available for sale has commanded around \$5.00 per pound. The young plants, the seed for which were planted September 14, came up in 10 days and were ready for replanting about December 1. When full grown the grass stands from three to four feet high.

WORK THAT MAY BE DONE IN THE WINTER

LEAN culture plays a most important part in the fight which must be waged against the insects which menace the success of the

home gardener's efforts, says an expert of the United States bureau of entomology. "Cleaning off all the rubbish left over from last season's gardening aids materially in reducing the numbers of the overwintering forms of the insect enemies of the vegetable garden, whose activities are only too great in any case.

"Cut worms, which hide in the soil in the day time and come out at night to feed on the tender growth and cut small plants entirely off, wireworms that damage the tubers of potatoes and other root crops, and a host of other insects, winter under brush and rubbish on the earth or a few inches under ground. Where they can find protection during the cool weather of winter, conditions are ideal for their survival, and the warm days of the spring will bring them out in countless numbers to feed upon the tender foliage of the young garden truck. Neighboring weed patches shelter many forms. In the Gulf region and westward some insects work practically the year round.

"Aphis, or plant lice, are active during the winter months and find food on ornamental vines and shrubs and growing weeds which afford them food and shelter when other plants are not available. Much may be gained by keeping down the weeds in neglected corners.

"Leaves, stems and other litter should never be allowed to accumulate up to the time of planting, or there will be thousands of insects the coming year where there were hundreds last season. Weeds should be cleared up and burned together with all rubbish.

"The soil should be thoroughly worked over at least once during the

winter, not only to enable it to conserve moisture, but to destroy such insects as may be spending the winter on, or a few inches below, the surface. This is best done at least a month before the seeds are planted.

"If chickens are available for the purpose they ought to be allowed free access to the newly turned over soil for a time, as the fresh meat in the form of insects, which they will find there will prove a very welcome addition to their diet, and its removal will go far towards insuring a fair start to the garden."

INVOICE

This is a good month to "take stock" as to the farm implements, that is, their condition, what repairs will be needed three to six months hence, how may their usefulness be preserved and extended? Draft animals are becoming scarcer and feed to keep them in best working condition is extremely high in price. This will induce many to do as French farmers are doing, buying tractors so far as possible then putting their implements in best condition to do the most work with the least cost. It is asserted that France will increase her production next year, but there are many features which are so discouraging she will need great effort to even hold production level.

Fourteen chemical elements enter into the composition of all plants—calcium, carbon, chlorine, hydrogen, iron, magnesium, manganese, nitrogen, oxygen, phosphorus, potassium, silicon, sodium, and sulphur. Only four of these are of prime agricultural importance; namely, nitrogen, phosphorus, potassium and calcium, because these elements are not only very necessary for plant growth but they are most likely to become deficient and need to be supplied in order to maintain soil fertility and a profitable production of crops.

Serve your country by saving food.

Lettuce Situation in California

By R. G. Risser, Bureau of Crop Estimates

URING the past season lettuce has ranked as the leading winter and spring vegetable in California and the following estimate indicates that it has made substantial gains in acreage over last year.

County	1916-17	1917-18
Los Angeles	2100	3600
Orange	125	200
Imperial	960	2500
Riverside	30	150
Sacramento	200	175
Yolo	175	150
Total	3590	6775

Shipping Season

The shipping season of each of the three principal shipping districts is shown by the following table which indicates the percentage of the total crop moved each month during the past season.

Los Angeles and Orange Counties, 1916: November, 8; December, 10; 1917: January, 11; February, 13; March, 22; April, 20; May, 10.

Imperial and Riverside Counties, 1917: January, 1; February, 21; March, 43; April, 35.

Sacramento and Yolo Counties, 1916: November, 18; December, 7; 1917: April, 27; May, 40.

Los Angeles ships lettuce every month in the year, but the summer shipments are very light. Sacramento shipments were cut down by severe freezes last year and Imperial Valley was somewhat later both in starting and in finishing that it would be in a normal season. It was desired to have the Imperial Valley lettuce come on much earlier than last year and planting was done earlier. Extensive replanting was necessary, but it is expected that heavy shipments will start the first part of January. Scattering shipments may be ready much sooner.

An increased planting of spinach for canneries and of beets, carrots, onions, and other vegetables for seed production has reduced the area of lettuce near Sacramento. The damage done by freezes last winter also discouraged growers from planting so much lettuce this year.

Yield of Lettuce

The yield of lettuce in California is quite variable, but 300 crates per acre of four dozen heads each is considered normal. A grower in the Imperial Valley last year who had 60 acres shipped 43 cars from the first 34 acres, but shipped only nine cars from the remaining 26 acres. Another grower secured 10½ cars from eight acres but

the entire valley produced less than half a car per acre.

Conditions

The lettuce which has been shipped during the fall of 1917 has been far below the standard for good California shipping lettuce although there have been a few lots of excellent lettuce sent out. The weather has been warm, dry, and sunny which is unfavorable to the proper heading of the plants.

The more general use of the highways in the Middle Eastern and Atlantic states for the transportation of war material of all kinds and supplies to the seaports is calling attention to the advantage of better highways and more trucks and autos. Hundreds of tractor "trains" from sections as far west as the western line of Ohio have been made up to carry supplies to the Atlantic Coast points.

**Olive Trees**  
such as these are grown only on our foot-hill locations. — Note the good roots — for hardiness they have no equal.

We have a fine lot of Mission and Manzanillo trees, both on Picholine roots and grown from cuttings. We have had splendid success on all Olive plantings—a most important assurance to you.

Submit a list of your tree wants for special quotation. Do it right now.

We have also a complete assortment of Shipping Plums, Cherries, Prunes, Bartlett Pears, Fall Pears, Peaches, Almonds, Apricots, Walnuts, etc.

Our foot-hill grown trees are free from root diseases common to other localities. Our trees insure your future profits in fruit growing.

And remember—we will accept Liberty Bonds as full or part payment for trees. Write us today.

## OUR ADVERTISERS RELIABLE

We guarantee our subscribers against loss through dishonesty of any advertisers in the Cultivator. We do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Notice of complaint must be sent us within 30 days from date of the transaction, and the subscribers must have mentioned the Cultivator when writing the advertiser.

## THIS WEEK'S COVER

Is it any wonder that the native of the wind-swept prairies or the blizzard visited country farther east goes into raptures over California when he comes over the San Geronio or the Cajon pass and looks down on scenes similar to the one on cover of this issue—where the snow is in the background and the foreground for miles is richly laden orange, lemon and olive groves. This proves to be a season when the trees are not so heavily laden as usual, but there are true riches in the small amount of fruit which the Navel trees are bearing this year. The prices are good; every marketable orange will be picked and, still better, many an orange grower is planning for intercrops which will help in feeding the hungry people.

## INDEX

The Cultivator is now ready for Volume L, for this number completes Volume XLIX, index for which appears on pages 670 and 671. We make no claim of this index covering the whole range of agricultural learning, but a look at it will show that a great number of agricultural topics have been touched, and this fund of information is of little permanent value unless this index, with each week's issue, is preserved and filed.

## A HAPPY NEW YEAR

As labor which is sometimes irksome leads to true happiness, so may the awful warfare into which this country is plunged lead to liberty so general that all the peoples will have great happiness coming to them because of the results of the next 12 months. If there is happiness in contemplation of work well done, we be-

lieve 1918 will end with happiness for this country because of a war well ended. So we wish for all a most happy new year which shall have this most satisfactory ending, and that, as never before, the participation of all of us in the war may be general. Let all be true patriots in the support of our government in word and deed.

Again, may it be a Happy New Year for all.

## ORDER FERTILIZER

Freight is congested. Thousands of commodities are being sidetracked to make way for successful war preparation. But our lands, if they are going to produce, must have fertilizers, and we doubt not a way will be found to transport them wherever possible, but it will certainly take a much longer time to secure delivery than under normal conditions. Hence needs in this particular should be anticipated by months rather than by days. Order early and have on the ground ready for application.

## BUGS EAT BUGS

The greatest drain upon the fruit industry is caused by destructive insects and fungus diseases. Time was when California climate was sufficient to discourage both of these evils, but unfortunately that time has passed long since, and the effort is now being made to use other forces of nature to make their control automatic. It will never be, at least to 100 per cent efficiency, but there have been some successful examples, like that of the vedalia which did bring under perfect control the white scale which at one time promised to wipe the citrus orchards of California out of existence. So we are scouring the earth for new bugs to fight the bugs. Hence the effort today to secure the parasite of the mealybug as given on preceding pages of this issue. Mr. Clausen has been studying mealybugs and their natural enemies for several years and is now located at the southern insectary in Los Angeles County and hopes to develop from a number of beneficial insects now being grown one or more which will prove effective in control of the pest, which sometimes lives in treetops and sometimes on tree or weed roots. This habit of the mealybug makes control by artificial means very difficult. If a parasite can be secured which will control it profit will accrue to a far greater degree than today.

## This Week's War News

France is facing its most serious scarcity of foodstuffs.

Coal shortage continues over the East, and much suffering has been caused by the cold wave.

Over 30 arrests were made in connection with the dynamite explosion at the governor's mansion, Sacramento.

The sinking of a diver at a port on the Pacific Coast caused the death of 19 Americans, several of them Californians.

The seizure of Vladivostok by the Japanese and of Harbin by the Chinese, reported a couple of weeks ago, is now denied.

Plenty of turkey and a royal good time were given to the liberty army in all camps of the United States on Christmas day.

The Red Cross drive for 10,000,000 or more of new members went over the top with nearly 13,000,000, and the roll is still open.

The activity of the submarine continues to decrease, and it is admitted by Germany that she must now depend upon her army.

The demand for discontinuation of teaching of the German language and literature in American schools is becoming more insistent.

Careful survey of the Halifax disaster develops the fact that there were over 1500 killed, 400 blinded, 4000 seriously injured, and 20,000 homeless. The financial loss is in excess of \$50,000,000.

Persistent report has is that immense losses were caused in the Krupp gun and munition plant at Essen, Germany. An explosion, followed by over 24 hours of conflagration, caused immense damage.

The situation in Italy has looked favorable to the Italian army most of the week. The Italians have made some advances, and later retired in some sections. They are still receiving support from French and English troops.

The Germans continue moving large numbers of troops from Russia to France. The conditions in Belgium and France have continued with general artillery action nearly the whole length of the line. Apparently the Americans are occupying a longer sector, and occasional note is made of death or capture of Sammies.

## CITRUS INDUSTRY IN ARIZONA

Continued from Page 655.

which is now nearly harvested will be between half and three-fourths of a normal yield.

As compared with the California crop the few oranges and grapefruit in Arizona, (and I have reference only to the Salt River Valley) is a very small matter. There seems to be a diversity of opinion as to the actual acreage, a survey made recently by the Arizona council of defense finding the acreage somewhat larger than was generally supposed. The explanation is probably that this acreage includes some orchards which have been filled in with other varieties of fruit or consist largely of scattered trees.

According to the best figures of the Arizona Orange Association the acreage of bearing trees is approximately 500 acres and of young trees, 700 acres. This year's crop is running very even and the quality is splendid. The association handles about 90 per cent of the entire crop, and the fruit is practically all contracted for before it leaves the valley. It is netting the grower an average of three cents a pound on the tree. H. A. Severinghaus, one of the heaviest growers in the valley and manager of the association, states that the crop this year will be between 75 and 100 cars of 400 boxes, exclusive of the culls which are marketed locally.

The heavy drop in the summer resulted in thinning the fruit so that it runs very even; there is no surplus of any particular size. Grapefruit this year is rather smaller than it is some years but is better quality and finer texture than usual.

At the present time there is only a small acreage of grapefruit; which is producing heavily, consequently most of the fruit being marketed is the Washington Navel. This has been the favorite orange. An advantage which the growers here have, over the growers of oranges in other sections, is the earliness of ripening. Oranges here ripen two weeks earlier than the oranges of Tulare County, California, and this enables the growers to get a considerable amount of their crop into Eastern markets before the holidays.

Grapefruit seems to be especially adapted to this section, and a considerable acreage is coming into bearing within the next few years. Mr. Severinghaus states that within the next few years there will be 500 cars of grapefruit shipped annually from this valley, that is, when the young groves come into bearing. The acreage of

lemons will always be small as there is said to be but a small area where they can be grown. At the present time there is about ten acres of bearing lemons, which this year will make about three car loads.

There isn't likely to be any boom in the citrus industry, for with cotton netting the grower \$200 and more an acre, oranges or grapefruit, even at \$3.50 a box, don't offer sufficient inducements to a fellow without the capital to wait until a grove comes into bearing. All the same there will be considerable planting done next year, mostly of Washington Navel oranges and a new orange known as Early Seedling. This orange has all the good qualities of the Washington Navel and seems to hold its fruit better and also resists cold better. It is thin-skinned and the flavor splendid. The trees grow larger, and the few old trees have yielded as high as 25 boxes to a tree. This orange is coming into popularity, and as the stock becomes available will be planted more and more.

There is very little smudging done here. Only three groves are equipped for smudging, and to date (November 20) fires have been lighted but three times. Ralph Murphy, who with his father owns several groves in the valley, including the first grove set out, says, "there are very few winters that are cold enough to injure mature trees in an area extending from Scottsdale to the New Black Canyon road about three miles wide, and the hardier varieties will do well further south."

In addition to the area mentioned above there is a considerable section south of the river and east of Mesa which is equally well adapted to citrus fruit. Probably the entire area would total at least 35,000 acres. As this land can be bought for \$250 to \$300 an acre, and as a grove will begin to bear considerable fruit at four years from planting, the citrus industry seems to have a fairly rosy future. Evidently the growers are pretty well satisfied as I am unable to learn of but one grove for sale, and this is a 30 acre grove which is offered for \$40,000. No doubt it would be better for those now in the business if the acreage were extended to approximately the area suitable. There would then be fruit enough produced to be more noticeable in the markets, and it would be better for all concerned.

The Orange Growers' Association plans to build a modern packing house. At present, while they have modern equipment, the quarters are not suitable.

Commercial fertilizers are not used to any extent. Stable manure is used quite largely, and many growers are plowing under green crops. Cow peas have proved excellent for a summer cover crop, and at least one man reports very pleasing results from a winter cover crop of yellow sweet clover.

Insects and fungus diseases have never become serious or caused any considerable losses. Under the careful watch of the state entomologist, Dr. A. W. Morrill, scale and other insects have been kept out, and a rigid inspection of all stock shipped in, together with the cooperation of the growers, has resulted in preventing any dangerous insects from getting a start.

Citrus growing is commonly regarded as necessarily a rich man's game, as it is estimated to cost around \$500 an acre to get a grove to bearing age. Most of our farmers couldn't afford it. Conditions are changing now. Better buildings are taking the place of temporary houses. Barns and silos are being built, and it is not surprising to learn that many who have land in the area suitable for citrus will gradually extend their plantings.

## CHISEL TEETH

The surest way to save \$2.00 is to spend one for California Cultivator.

Good habits, proper food, hard thinking—patriotism.

The income tax will cause the farmer to do some "figgering." He will learn as to "overhead." He will grow those crops which care for the "overhead" and the price of living will be higher.

"Any fool can ask questions." Intelligence is required to ask questions which can be answered with two or three letters—"No" or "Yes." Intelligent questions lead to definite information.

Monuments are a fine institution, but there is difference between a monumental act or a monumental life and one of marble.

# Agricultural News Notes of the Pacific Coast

## Northern California

San Joaquin County will produce a large quantity of irrigated wheat.

Amador County has had sufficient rain that plowing is general in all sections of the county.

The olive packing plant of Libby, McNeil and Libby in Sacramento County is in full operation.

Winter peas are proving profitable and the planting is general in northern portions of Sacramento Valley.

Parker Talbot is Shasta County's new farm adviser. He will have offices with County Commissioner Lammi-man.

The Glenn County farm bureau maintains a market commissioner. There are 700 members of this live bureau.

Shasta County's olive crop is only about half of normal but quality and size is several hundred per cent of normal.

Many members of Eldorado County Farm Loan Association have received their loans from the federal bank at Berkeley.

Beet growers of the north, like those of the south, are in rebellion at prices offered and are not readily signing contracts.

The Orland Project settlers of Glenn County maintain they have the finest showing of Jerseys of any similar section of the state.

Beekeepers of Butte County recently met at Chico and discussed methods of securing greater production of honey another year.

Butte County's olive mills are running full capacity because war conditions have created keen demand for both the olives and oil.

Colusa County is planning for more general rice planting. At Princeton alone it is thought that nearly 3000 acres will be planted.

We have had our annual raisin day, orange day, prune day, etc.; now comes Grass Valley and observes December 14 as bean day.

Farm center meetings are appealing for the deciduous experiment station, movement for which was started at the recent state convention.

Rice growers of Sacramento Valley have appealed to Hoover for relief in the car shortage situation. Over 3,000,000 bags of rice are tied up.

The orange crop of Butte County has been found to be far lower than predicted. It is now thought that less than 20 per cent of former production will be the limit.

The northern end of the valley has been visited by a warm rain which was not heavy enough to do permanent advantage but aided livestock men in giving relief to pasturage.

Bean growers of northern and central California recently met in Sacramento and organized the Central California Bean Growers' Association, for the purpose of marketing and even encouraging more general growing. Over \$3,000,000 worth of bean crops are represented in the membership.

Rice growers of Glenn County recently met with Horticultural Commissioner Wrenn and discussed methods of eradicating water grass and other pests of rice fields. A committee was appointed which will investigate the advisability of forming a regular association of rice growers.

## Central California

Salinas, Monterey County, held a tractor demonstration last week.

Farmers near Oakdale, San Joaquin County, who planted rice last year, will grow wheat this year.

Cattlemen of Merced County are organizing in support of the California Cattlemen's Association.

Raisin growers of Kingsburg, Fresno County, are generally signing the new contract with the Associated.

Farmers of Fresno County are discussing with Adviser Smith as to extensive cotton planting in that county.

The preliminary arrangements for the Madera irrigation project are practically completed and dam site located.

If Terra Bella, Tulare County, is given the normal crop of olives next year she estimates it will aggregate 2000 tons.

Farm Adviser Smith of Fresno County is urging more general planting of shade trees along the state highways.

County Commissioner Collins of Tulare is urging immediate spraying of peach trees which have shown any indication of blight.

Empire, Stanislaus County, which has been a great producer of peas is now contemplating planting an immense crop for next season.

The state sealer of weights and measures has ruled that hereafter the minimum weight of a sack of potatoes shall be 100 pounds.

The Farmers Educational and Cooperative Union of the state, in session in San Jose recently pledged closer cooperation between consumer and producer.

The Farmers' Union of Paradise recently elected O. P. Pearson, president; Mrs. J. W. Benolt, secretary. Delegates were elected to the Stanislaus County Union.

An application has been made to the state water commission for permission to appropriate 60,000 acre-feet per annum from Chowchilla River in Madera, Merced and Mariposa Counties.

The president has signed a proclamation eliminating 431,000 acres from the Sequoia National Forest. Some of these lands near the Kern River, known as Kennedy Meadows, are rich pasture lands.

Foresters making observations in the forests of the Sierra Nevada, especially in the Rubicon River and Tule Indian reservation districts have discovered over \$65,000 of direct insect damage to the forests.

The Farmers' Union, in connection with laborers and consumers leagues, recently met in San Jose and discussed methods of aiding the federal government by producing and conserving.

Meetings of San Joaquin County farm bureaus scheduled for January are, Farmington, 2; Lavelle, 4; Directors, Stockton, 5; Thornton, 7; Linden, 9; Douglass, 10; Lockeford, 14; Ripon, 17; Manteca, 18; Escalon, 21; Live Oak, 28.

A meeting of members of the Prune and Apricot Growers' Association of Santa Clara County was held at Sunnyside on December 6 to consider the building of a packing house at that place. President Coykendall of the association was present.

## Southern California

Coachella Valley recently shipped its first car of lettuce for the season.

Imperial Valley is shipping out immense quantities of cotton and sorghum grains.

Tractor demonstration and school at Riverside Experiment Station, February 11-16.

San Bernardino had nearly 1000 birds on exhibition at its annual exhibition last week.

The Janss Investment Company is anticipating the rainy season by putting two big tractors on one plow.

Stockholders of Fallbrook Olive Association have voted to market through the California Growers Association.

Imperial Valley's grape fruit crop is showing up its usual high qualities and big demand is cleaning up the output.

The third annual farm assembly of Imperial County will be held at Holtville February 5.

There is a project on foot to reclaim rich lands of the Palo Verde Valley along the Colorado in eastern Riverside County.

San Dimas, one of Los Angeles County's largest lemon producing sections, recently shipped 56 cars which averaged around \$4.60.

Imperial County now first in the production of butter fat, claims to have received during the past year over \$4,000,000 for its butter production.

Board of Directors of the Victor Valley Irrigation District are working for a supply of water which will bring the lands of that rich section under more intensive culture.

Farmers of the Coachella Valley, Riverside County, are in arms over application of appropriators of waters which it is claimed are needed on the farming lands of that valley.

It is hoped that 20,000 acres of rich land of the upper Coachella Valley may be brought under irrigation by storing storm waters in canyons of the White River and other streams.

The California Lima Bean Growers' Association made a small before-Christmas payment on all beans delivered. Payments already made aggregate about seven cents per pound to every grower.

The farm bureau of Imperial County has appealed for a continuation of the activities of the labor bureau working under the county council of defense. The labor situation in Imperial Valley is serious.

A road connecting the Imperial Valley-San Diego State Highway with the Laguna mountains will open up some of the most picturesque scenery in the Lagunas. It is only about ten miles long and will cost \$30,000.

Many Los Angeles County vegetable growers have made contracts with the British government to grow turnips. The turnips are to be loaded on ships at San Pedro and taken to British Columbia where they will be evaporated and sent on for use of the soldiers. The contract price is reported to be \$13.50 per ton.

Deputy State Horticultural Commissioner Hoyt and County Commissioner Sharp of Riverside recently stopped erection of a cotton gin shipped to Blythe after operation in boll weevil section of Texas. A careful examination was made however and no weevil were found.

## The Coast and General

Florida reports its lettuce crop in fine condition.

United States has now over 500 cow testing associations.

The prune crop of the northwest was exceedingly light this season.

The Carnation Creamery Company's plant in Idaho was increased by \$175,000 additional equipment.

Large attendance was given at the irrigation institute held recently at North Yakima, Washington.

Boise Valley in Idaho is making one shipment of seven cars of honey. It all goes to the British army.

One fruit company at Yakima, Washington, has supplied to the army 30,000 gallons of cider vinegar.

One sourkroot factory at Vancouver, Washington, had an output of over 1000 tons during the past year.

The construction of a sugar factory in Franklin County, Idaho, has been deferred until some other year.

A syndicate of San Francisco bankers has just purchased \$5,500,000 of Imperial Valley irrigation bonds.

Canada lost \$9,000,000 by forest fire in 1916 which is more than six times the amount spent in forest protection.

The Walla Walla Valley, Washington, has shipped more than \$14,000,000 worth of product in the past 12 months.

The sugar situation in the Hawaiian Islands is being complicated by threats of strike on the part of Japanese workers.

Arizona cotton growers are finding their mistake in planting exclusively to cotton and then paying long prices for hay and stock feeds.

There will be a corn growers and stockmen's convention at College of Agriculture, University of Illinois, sometime during January.

The output of dairies of Clallam County, Washington, has greatly decreased because of many dependable farm helpers entering the army.

Three cars of pure bred Ayrshires were recently received at Minden, Nevada. Some were winners and many, descendants of winners at the P. P. I. E.

The Utah state experiment station is investigating as to a mechanical beet topper which promises to work effectively and without undue cost. It tops, digs and rolls beets into the wagon without their being touched by hand.

The war board of the railroads has urged that every railway give as prompt transportation and delivery of fertilizers as possible. The Broadway limited, between New York and Chicago, and other high class expensive trains, have been taken from many Eastern railways and the rolling stock used so far as possible for actual war service.

The Philippine bureau of agriculture is making a campaign against the pests of the islands, and the Mindanao Herald, published at Zamboanga, hopes it will result in far greater production of hemp fiber and that Zamboanga will be made one of the world's great fiber distributing stations. Because of the importance of fested with either injurious insect or this industry no plant will be permitted to pass quarantine which is infungus.

**Have You Learned that  
KOW-KURE Can Make a Difference?**

It is common knowledge in thousands of the best dairies from coast to coast that Kow-Kure has no equal as a medicine-herb for cows that are "off color." Such common ailments as Abortion, Barrenness, Retained Afterbirth, Scouring, Lost Appetite and Bunches are promptly eliminated by the active medicinal qualities of Kow-Kure, working on the digestive and genital organs.

As a preventive of disease, the occasional use of Kow-Kure will pay big returns in increased vitality and improved milk yield. Used before and after calving, Kow-Kure will prevent Milk Fever and Retained Afterbirth, and enable the system to resist the other diseases which frequently start at this period.

If you have a cow that is not yielding as she should, something is wrong with her organs of production. Try Kow-Kure and note the prompt improvement in appearance and yield.

Sold by druggists and feed dealers; 55c and \$1.10 packages. Send for free treatise, "The Home Cow Doctor."

## Corn Silage Cuts Beef Production Cost

THE University of Missouri college of agriculture has recently published data from two feeding tests which should be of interest to every beef producer in the United States, especially with the present high cost of feeds and beef. Seventy head of two-year-old steers were fed in two tests conducted during two different years: first, to secure data concerning the possibility of fattening cattle by the extensive use of corn silage without the use of additional corn in the ration; second, to study the importance of a high protein concentrate when combined in a ration of shelled corn, corn silage and alfalfa hay; third, to compare the relative value of old process linseed oil meal and cottonseed meal in rations containing corn silage. The first test was conducted during the winter 1915-16 and the second during 1916-17. The two tests lasted 133 days and 130 days respectively.

In both years the cattle which received a liberal allowance of corn silage with alfalfa hay and cottonseed meal or linseed oil meal made the cheapest gains. The steers in the first trial which received cottonseed meal, corn silage and alfalfa hay made a profit of \$9.87 per steer. The cost of grain per hundred pounds, with the gain on hogs credited at \$8.00 a hundred, was \$10.15. The cost per hundred pound gain on the steers which received linseed oil meal, corn silage and alfalfa hay was \$8.57, and the profit per steer was \$14.56.

During the second trial the cheapest gains were likewise made by the steers which received cottonseed meal, corn silage and alfalfa hay; linseed oil meal, corn silage, and alfalfa hay. The cost of gain per hundred pounds on cattle, with the gain on hogs credited at \$13 a hundred, was \$14.28 in the case of the lot which received cottonseed meal, corn silage and alfalfa hay; and \$14.06 in the case of the lot which received linseed oil meal, corn silage and alfalfa hay. The profit per steer was \$11.59 and \$15.62 respectively. With corn at \$1.00 a bushel and silage at \$6.00 per ton the profit per steer would have been \$19.38 and \$23.57.

The following is an extract of the conclusions drawn from the experi-

ments by H. O. Allison, who conducted the investigations: "The records of feed as fed in the lots receiving cottonseed meal or linseed oil meal with corn silage and alfalfa hay show the possibility of fattening from three to four two-year-old steers per acre of corn. The average daily gains in live weight made by the cattle in the lots which received no corn other than contained in the silage, while not as large as those in the lots where shelled corn was fed, were satisfactory for fattening cattle. The average daily gains in live weight on the cattle were increased by the addition of a high protein concentrate to shelled corn, corn silage, and alfalfa hay. The gain made by the hogs was greater in the lots which received linseed oil meal than in those which received cottonseed meal, both when combined with shelled corn and when fed without corn.

"The steers which did not receive shelled corn in their rations, although not the best, were sufficiently satisfactory to command a good price and to make a good grade of beef, as indicated by the net profit per steer. The difference in the market price of the cattle was not sufficient to justify the feeding of shelled corn in the first trial. In the second trial this difference was sufficient to justify the feeding of corn at \$1.00 a bushel and silage at \$6.00 a ton, but it was not sufficient to justify the feeding of corn at \$1.50 a bushel and silage at \$11.50 a ton.

"Judging from the two tests it may be said that it is ordinarily advisable to feed a high protein concentrate to fattening cattle which receive shelled corn, corn silage and alfalfa hay. The net profit per steer was greater in both trials in the lots which received linseed oil meal rather than cottonseed meal, both when fed with shelled corn and without corn."

### FEED CONCENTRATE WITH SILAGE

Silage alone does not constitute a balanced ration. It is comparatively rich in carbohydrates and fats, and deficient in protein and mineral matter. For this reason best results are to be had only by the use of supplementary feeds comparatively rich in protein.

Alfalfa and clover hay, linseed and cottonseed meal, and feeds of like nature are suggested by the University of Missouri college of agriculture for this purpose.

Morris' Great Cow

The Holstein-Friesian Association of America is calling attention of Eastern breeders to the great work done by Aggie Acme of Riverside. She brings World's Championship to the Pacific Coast by producing 1881.77 pounds in 365 days strictly official test.

## The Babcock Test

VERY dairyman ought to own and use a Babcock outfit for testing the butterfat of his cows' milk.

Under normal conditions a creamery patron may expect some slight variation in the test of cream he delivers to his creamery, but certain conditions cause material fluctuation. These conditions result in much worry on the part of the creameries because of the difficulty of explaining them satisfactorily to the dairyman.

Among the causes for variation in cream tests are improper speed of the bowl, through not turning the handle of the machine a sufficient number of times per minute; low rate of inflow, which reduces the volume of milk running through the separator in a given time; and the amount of water used in flushing the bowl. The latter is one of the most frequent causes for marked variation in tests. Since approximately half of the water used in flushing a bowl will go into the cream can, if the same amount is not used each time the cream test will vary, being lowest when the larger amount of water is used, and vice versa. When the test has dropped, usually the pounds of cream have increased proportionately. This variation is frequently the source of much suspicion on the part

of dairymen toward the creamery, but the trouble could be eliminated entirely if more dairymen understood and used the Babcock test. The simplicity of the butterfat test makes it desirable for the dairyman to own an outfit. The value of its results, especially in herd testing, makes it indispensable. If, however, the dairyman has no tester he may check his creamery test by having a sample tested by some disinterested party. During the past year over 500 samples of milk and cream have been tested by the Dairy Division at the University Farm at Davis for dairymen in different parts of the state. These samples represent tests of cream where dairymen desire to check their creamery tests, tests of milk from individual animals under observation for production, and tests of skim milk in order to detect separator losses. In sending samples of either milk or cream the dairyman should bear in mind that the sample must be representative of the lot from which it is taken, which will be the case only when the larger lot has been thoroughly mixed by stirring or pouring previous to sampling. Samples mailed should be sent in sealed bottles and carefully packed to prevent leakage and breakage. Bottles should be filled, so that samples will not churn in transit.

## Cow Testing Associations

Professor E. C. Voorhies favors us with directory of cow testing associations of the United States up to July 1, 1917. It is compiled by the dairy division of the bureau of animal industry, United States department of Agriculture.

In the chart showing number of cow testing associations in operation on July 1 of each year the fact is developed that Michigan was the first and in fact two years ahead of other states in cow testing work. On July 1, 1906, she had one association. A year later she had four, and, strangely, the following year had only two. But that year Maine and New York entered the lists; Maine with three; New York with one association. After that the increase is rapid year by year. California's first association is reported in July 1, 1909. We take it of course this was the Humboldt County Association. In 1910 California had three associations and has increased the number until she now has 15. The increase in associations in the United States is shown by these figures: July

1, 1906, one; '07, four; '08, six; '09, 25; '10, 40; '11, 64; '12, 62; '13, 100; '14, 163; '15, 217; '16, 364; and July 1 of this year, 469.

The state with the greatest number of associations, as might possibly be guessed by many, is Wisconsin. She now has 81 associations. The second in the list—and we venture it is few guessers who would choose the state which is second, is little old Vermont. She has 47 associations. New York is next with 43. In the number of herds which are members of these associations Wisconsin leads, as she has 2387. New York comes second, but little Vermont crowds her close. New York has 1022, Vermont an even thousand. The number of herds in California's 15 associations is 581, with 18,805 cows, or an average per association of 38.7 herds, or 1253.6 cows. The number of milk cows in the United States, July 1, 1917 was 23,372,200. Less than one per cent, 0.91 per cent, are members of these associations; in other words there are members of the associations 211,966 cows.

## Slaughtering at Home Saves Money

Slaughtering home meat on the farm saves the farmer money, saves freight on live animals to market and the return freight on finished products, utilizes labor on the farm at a time of the year when it is relatively unproductive, permits the housewife to increase her bit in food production and conservation.

Much of the commonly practiced farm killing is wasteful in that the fat from the offal is not carefully saved. If kept clean all fat is edible. That which is soiled should be saved for home soap making. Cheek and head meat of beefs should not be wasted. It is splendid meat for mince meat or hash meat. First and second stomachs make valuable, edible meat (tripe) and are not hard to clean. They can be worked up into sausages

and head cheese. Every farmer can afford a bone grinder to utilize the bones for poultry and hogs. Non-edible offal should be cooked for feed for hogs and poultry. This is a better practice than feeding it raw.

In the short course in butchering and cutting and curing of meats at the University of Missouri College of Agriculture special emphasis is placed on the economical handling of the meat animals under farm conditions.

Meats cured on the farm do not have the uniform cure of the packers' meat. Much of the bacon is too salty to eat. This is largely the fault of the farmer in not giving careful attention to details. Country cured meats can be made uniform, and of a flavor and quality not attained by the packing houses.

### PERCHERON BREEDERS

At the recent meeting of the Percheron Society of America, in Chicago, the president in his opening address expressed the opinion that this was no time for pessimism in the horse business. Breeding has been curtailed materially during the past few years, but the demand at the present moment is good, and even considering the high cost of feed draft horse breeding will prove profitable. He suggested a series of horse breeders' shows during the coming year.

Secretary Dinsmore reported great growth of the society during the past seven years. At that time the society had about 2850 members. It now has increased until there are over 9000, and the resources, funds and securities are in excess of \$106,000. The last year has been the banner year of its history as to the number of registrations and transfers. Ten thousand five hundred and eight registrations were made during the year. All but about a thousand of these were American bred.

After the election of directors the following officers were elected for the coming year: E. B. White, president; W. S. Dunham, vice president; and of course Wayne Dinsmore continues as secretary.

### CURE BEEF AT HOME

Farmers can not only reduce their living expenses but they can perform a patriotic service by curing their own meats. Many farmers cure pork enough to supply the family needs but very few attempt to cure beef. P. F. Trowbridge of the University of Missouri College of Agriculture offers the following suggestions for curing beef on the farm.

Any of the brine or dry mixtures which give good results in curing pork can be used satisfactorily for beef, but since beef is leaner than pork, it should not be allowed to remain in the brine or mixture quite so long or it will become hard and salty.

Dried beef should have the same cure as corned beef, but it should not be allowed to become too salty. It should then be washed to remove the excess of the cure, and smoked if the smoke flavor is desired. A very good country practice is to dry cure the beef with salt and brown sugar, using about a fifth as much sugar as salt, rubbing the meat very thoroughly with the cure every two or three days for about two weeks. It should then be washed, wiped, and hung up to dry in a warm place or transferred to the smoke house and given a light smoke.

Corned beef is at its very best when it has been in the cure about ten days. If kept in the cure more than a month, it needs considerable freshening before cooking. If the red color of the beef is to be preserved, use a small amount of saltpeter, not more than two ounces to each hundred pounds of the meat. This improves the color of the beef but is detrimental in that it tends to harden the lean fibers.

### PLANT SILAGE CROPS

This is a good time to plan for next season's ensilage crops. There have been hundreds of silos erected during the past few months; there will be other thousands, we believe, in the very near future. As we have said before, "place your order early" will apply to ensilage cutters and other appliances which may be needed to secure the greatest return from feeds raised on the farm. With present prices of concentrates, the successful dairyman is producing and preparing to utilize as much of his feed as possible.

Warranted to Give Satisfaction

## Gombault's Caustic Balsam

Has Imitators But No Competitors

A Safe, Speedy, Positive Remedy for

Curb, Splint, Sweeney, Capped Hock, Strained Tendons, Founder, Wind Puffs and Lameness from Spavin, Ringbone and other bony tumors. Cures skin diseases or Parasites, Thrush, Diphtheria. Removes Bunches from Horses or Cattle.

As a Human Liniment and Antiseptic for external use it is invaluable.

Every bottle of Caustic Balsam sold is warranted to give satisfaction. Price \$1.50 per bottle. Sold by druggists, or sent by parcel post, with full directions for its use. Send for descriptive circulars, testimonials, etc. Address

The Lawrence-Williams Co., Cleveland, O.

## TAGUS

### Duroc Jerseys

Home of California  
Defender, World's  
Champion Boar.

Choice pigs for sale, either sex. Big litters, prices reasonable, quality guaranteed.

Place orders early as demand will exceed supply before war ends.

(Swine Dept.)

Pacific States Corp.

Tulare, Cal.

H. C. MERRITT, Jr., Manager

## Fatten Your Hogs

To get fat hogs you've got to feed right. One of the best hog foods available today is

### Cann's Oriental Beans

Imported by us direct from China, where its merits have been appreciated for many years. These beans are bug-proof and thrive almost anywhere. Not affected by frost. Invaluable also as a cover crop. Can be planted for their forage and later turned under for green-manuring.

Per lb., 10c; 100 lbs., \$7.00. Write for prices on large quantities. SEND FOR OUR CATALOG OF FORAGE AND COVER CROPS, POTATOES, ETC.

### ARTHUR CANN

Seedsman

197 S. First St.

San Jose, Cal.

## KEEP IT HANDY

You can never tell when a horse is going to develop a Curb, Splint, Spavin, Ringbone or lameness. Yet it is bound to happen sooner or later. And you can't afford to keep him in the barn. Keep a bottle of

### Kendall's Spavin Treatment

handy at all times. John Sayer of 324 Bronson Ave., Ottawa, Ont., writes: "I would not be without Kendall's Spavin Treatment at any cost. It is a valuable liniment for both man and beast."

Get Kendall's Spavin Treatment at any druggist's \$1.10 per bottle—6 for \$5.50. Treatise on the Horse—free—or write to

Dr. B. J. Kendall Co. Enosburg Falls, Vt., U. S. A.

### DUROC JERSEYS

Sows, gilts and a few boars of the best breeding FOR SALE

H. P. Slocum & Son

R 1

Willows, Cal.

Correspondence with the advertisers in the California Cultivator will convince you that their articles will save you money.

## Classified Liners

The direct selling method from producer to consumer, and a clearing house for over 31,000 readers, weekly  
Liner rates: Single insertion 3c per word;  
yearly contracts 2½c per word. 35c per issue minimum charge.

### TREES

**Eureka Walnuts** are the Best—Grafted on native black roots. We also have some grafted on paradox roots, which means a hardy root system and a very prolific grower. Prices reasonable, write today, tomorrow never comes. Geyer Bros. Walnut Nurseries, 214 S. Alhambra St., Alhambra, Cal.

**Here is Your Opportunity to Secure A-1 citrus trees.** We offer several thousand 2-year-old lemons: Eureka and Vina Franca, also Washington navel; also several hundred Valencia on sweet root. We call these good trees and we know whereof we speak. ALBERT JACKSON, Upland, Cal.

**Let Us Show You Our Ideal** twelve hundred acre orchard from which these perfect yearling citrus trees were propagated. Healthy straight stock, budded one foot high on sour root growing in our own nursery. References: R. R. Morris, East Whittier, Cal.

**Placencia Perfection Walnut Trees** on black root. Still have a limited supply of first class stock. Scions used in grafting taken from trees showing a high record for crop and quality after seven years of careful selection. Hugh T. Thomson, Orange, Cal. Phone 502R1.

**Pear Trees**—Offer several thousand Bartlett's, 2 and 3 feet, heavy caliper at 9c each. French prunes. Trees of all kinds. No agents; we sell direct. Write for price list. Carlton Nursery Co., Carlton, Ore.

**By Far the Lowest Priced** means of reaching a buyer for what you have to sell is through classified advertisements in California Cultivator. The cost is only 3 cents per word per issue, with a minimum of 35 cents.

**For Sale**—Valencia trees, extra fine yearlings, straight, thrifty, sour root, high buds, not fertilized, fine soil for balling. Will contract for spring planting. S. R. Coate, Anaheim, Cal.

**For Sale**—15,000 sour orange seedlings. One year, 8 to 20 inches. Nothing better, \$25.00 f. o. b. Randall Bros. Nursery Co., Whittier, Cal.

**Olive Trees**—Mission, Manzanillo, Ascolano. Propagated by me from trees of known bearing qualities. Guaranteed. L. T. Schwacofer, Hemet, Cal.

**Citrus Trees**—All kinds, any quantity. Butler's Morning Side Nursery, Lamanda Park, Cal.

**Walnut Trees**—Placencia Perfection, selected grafts guaranteed stock. Wm. Pollard, South Pasadena, Cal.

**Fig Trees**—Thrifty, large Calimyrnas and Capris. Correspondence invited. C. A. Nelson, Exeter, Cal.

**Apricots, Olives, English Morello Cherries** and Arizona Ash. First class trees. C. E. Moyer, Hemet, Cal.

**For Sale**—French Mayette and Payne Walnut grafting wood, 5c foot. Bowman-Kuhn Ranch, San Jose, Cal.

**Apricot Trees** For Sale—A choice lot. Carsten Truelsen, Nurseryman, Hemet, Cal.

**Citrus Nurseries**, Murphy Oil Company, East Whittier, California. Selected stock for sale; inspection invited.

### SEEDS AND PLANTS

**Recleaned Alfalfa Seed** of known purity and vitality. Grown under various soil and climatic conditions. Write us of your conditions and let us help you in selecting the proper kind of seed to plant for largest crops. Order direct and save middlemen's profit. Desk B. BOMBERGER SEED CO., Modesto, Cal.

**ORDER YOUR SEEDS NOW**—If you are going to need any seed for next season now is the time to render your order. It may be impossible for you to buy what you need later. V. A. Peterson Alfalfa Seed Co., Arbuckle, Cal.

**ALFALFA SEED OUR SPECIALTY**—Strawberry Plants—500,000 Brandywine, Guar. 1st class true to name at special price to Cal. growers. 50 other varieties. Write for prices and Catalog. BUNTINGS NURSERIES, Box 200, Selbyville, Delaware.

**Alfalfa Seed**—Common variety, Hairy and Smooth Peruvian. Grown under ideal conditions. Do not buy until you have compared my prices and samples with seed others offer. E. F. Sanguinetti, Yuma, Arizona.

**Strawberry Plants**—Thoroughbred strawberry plants. Early Ozarks, Gold Dollar, Wm. Belt, Goodell. \$2.50 per thousand. Superb Everbearing \$10.00 per thousand. Mr. J. Christiansen, R. F. D. 2, Canby, Oregon.

**Rhubarb Plants**—Crimson Winter Burbanks \$3.00 per hundred; Victoria \$3.00, Wagner's Giant Crimson Winter \$3.00. 50 cents per dozen. Currier Bulb Co., Seabright, Cal.

**Strawberry Plants**—Gold Dollars, Magoons, Kelloggs Prize, Marshall's, Brandywines, and Mitchell's Everbearing. Prima Vista Gardens, R. R. 4, Arlington Sta., Riverside, Cal.

**Rhubarb**—\$1127.00 from one acre. A crop every month of the year. Write to me and I will tell you how you can do as well. J. M. Stone, Lodi, Cal., Route 4.

**5000 Yellow Calla Bulbs**—Elliottiana. 5000 Asparagus roots. William Richard, Santa Cruz, Cal.

**Mr. Alfalfa Grower**—If you want good seed at the lowest price, write me for samples and prices. Smooth Peruvian a specialty. O. C. Nordahl, Bard, Cal.

**R\*O\*S\*E'S** 50 cents per dozen. Write for Catalogue C, and special prices. Kavan Nurseries, San Bernardino, Cal.

**New Crop Alfalfa Seed** now ready. Not the lowest in price, but high in quality. Leo Turner, Yuma, Arizona.

### HOGS

**The Billiken Brand of Chester Whites**—

Entirely sold out of bred sows and gilts. Have a few open gilts of March and April farrows; also 6 boars, same age. Have 9 young tested sows to offer for late December shipments. These have each farrowed once and will be bred for a late March or early April farrow. Fall pigs, both sexes, now being weaned and will be ready for delivery during December. Good breeding stock is getting very scarce and rapidly increasing in value. If you want some of this easy feeding, melon type, get busy with your orders. C. B. Cunningham, Mills, Cal.

**Grape-Wild Farm Berkshires**—World's Fair Grand Champion Grand Leader 2nd heads our herd, not only himself a champion but the sire of champions. At the 1916 California state fair his daughters won all the senior sow classes including the grand champion sow. At the 1916 Oregon state fair a Grand Leader sow was junior champion. We are offering a number of choice boars of exceptional breeding and are also booking orders for fall pigs. A. B. Humphrey, Escalon, San Joaquin Co., Cal.

**20 of the Finest Boars Ever Sold** to improve the herds of pork producers. High price of pork assured because of the scarcity of breeding stock. Improve your herd with a good Poland-China boar. I have them from six to eighteen months old, priced from \$40 to \$100. Saving all sows for Kings County Poland-China Breeders' Sale, February 20. Bernstein's Ranch, Hanford, Cal. Hogs shipped on approval.

**Superba, World's Grand Champion** Poland-China boar and one of the greatest sires of the breed. Spring boars ready for service, also few sows bred to this noted sire, reasonably cheap. Rough's Greenfields, Arlington Sta., Riverside, Cal.

**Berkshires**—First prize junior boar; first and second senior boar pigs including junior champion; fifteen spring and fall open gilts sired by Ames Rival 115, champion boar; and two junior yearling bred sows priced cheap for immediate sale. F. D. Hall, Perris, Cal.

**We Pay Cash for Hogs of All Sizes**, weights and breeds. Any number from one to several thousand considered. What have you? Durbin and Forbes, 722 San Fernando Building, Broadway 4170, Los Angeles.

**PLW. Duroc-Jerseys**, the most consistent winners wherever shown. Peters, Lamson & Walker, Devore, San Bernardino County, Cal.

**Big Type Durocs**—Well grown out February and March pigs of either sex in any quantity. We ship only the tops and butcher the culls. F. M. Johnson, Napa, Cal.

**Most Money in Duroc-Jerseys**—Bred sows and weanlings, either sex all the time. Delta Farm and Live Stock Co., Colton, Cal.

**Large Yorkshires**—The ideal hog for the progressive farmer. Service boars and fall pigs, both sexes, for sale. A. L. Tubbs Co., Callstoga, Cal.

**Large Type Poland-Chinas** are prolific and profitable. Can furnish boars any age at reasonable price. J. A. Crawshaw, Hanford, Cal.

**Rancho Rubio Durocs** all sold out except some choice fall boar pigs. Write for prices. Elmer Lamb, Ceres, Cal.

**Greenwood Farm Durocs**—"Size with Quality." H. C. Witherow, Palo Cedro, Shasta County, Cal.

**Berkshires**—Sired by Star Leader, the \$1,500 boar, ready for service. Kounias Registered Stock Farms, Modesto.

**Durocs**—P. & L's Defender by Defender heads herd. Joseph Prendergast, Route 2 Box 87A, San Bernardino, Cal.

**Registered Durocs of the big type**—Cholera immune. Derryfield Farm, Odd Fellows Building, Sacramento, Cal.

**Carruthers' Farm Berkshire Hogs**—Our herd won Premier Exhibitor prize at the P. P. I. E. Exposition, Mayfield, Cal.

**Poland-Chinas**—A few good breeding boars. S. F. Williams, Orland, Cal.

### PATENT ATTORNEYS

Patents that protect are secured through The PACIFIC COAST PATENT AGENCY, INC., Savings & Loan Building, Stockton, California; send for our little booklet on "PATENTS"

### AUTOMOBILE STORAGE BATTERIES

**Titian Batteries** for Service, get our prices before buying or having an old battery repaired. Call or write, Olive Street Electrical Co., 910 South Olive St., Los Angeles, Cal.

### FOR EXCHANGE

**Pretty 6 Room Bungalow**, 1 acre, choice bearing fruit trees, chicken houses, etc. Value \$3,000. Sell cheap or part exchange poultry, livestock. Box 615, Inglewood.

### FARM LANDS FOR SALE

**For Sale**—One of the best 80 acre ranches in Kern County. Has a first class water right, also an Artesian well. Black sandy loam land. Fine state of cultivation. Small house. Located on the railroad, close to school, good neighborhood, all settled up around it, near a good trading point. Will sell for \$135.00 an acre. \$35.00 per acre cash, and the balance long time 7 per cent. Central Real Estate Co., 909 Baker Street, Bakersfield, Cal.

**Oregon, California Government Lands**. Latest Green Booklet Free. Tell "How, Why, Where." Write Joseph Clark, Sacramento.

**Free List of Monterey County bargains** Bohannon Realty Co., King City, Cal.

### CATTLE

#### OREGON JERSEYS

**Bull, Fussy Fern's Noble Boy**, Junior Champion, his dam also first prize State Fair, R. of M., 488 lbs.; other bulls for sale, whose dams have made up to 1040 lbs. There is butter in these pedigrees. Write for one.

Reid Stock Farm,  
Second Floor Wilcox Bldg.,  
Portland, Oregon.

**Guernseys**—We will sell stock from our prize winning, high producing herd, at reasonable prices, valued according to individuality and breeding. Our supply is limited but if the buyer wants a number of animals and will write us we will furnish him with particulars. Revada Guernsey Farm, Yountville, Napa Co., Cal.

**Pedigreed Bull Calves**, Registered \$50.00, unregistered \$25.00. Service bulls \$75 and up. Good individuals from producers. Cows with yearly records at a profit, tuberculin tested. Write or come and select. Horses. N. H. Locke Co., Lockeford, Cal.

**Registered Holsteins out of A.R.O. Dams**. Grandsons of King Korndyke Hengerfeld Ormsby who has 20 A.R.O. daughters with records of over 29 pounds. Look up this sire. Geo. Kounias, Modesto Farms, Modesto, Cal.

**D. O. Lively Stock Farm, Inc.**, 215 Hobart Bldg., San Francisco. Breeders of Hereford cattle. A few choice heifers for sale. We buy and sell live stock on commission. Farm at Mayfield.

**Venadera Jerseys**, the herd with official yearly records. Calves of both sexes for sale. Guy H. Miller, Route 1, Modesto, Cal.

**Veramont Stock Farm Pure Bred Herefords**. Location Plumas County. Ideal for stamina and vigor. Bulls for sale. Address H. M. Barnardover, San Jose, Cal.

**Registered Holstein Bulls** from high producing dams for sale at reasonable prices. Also a few choice females. McAlister Sons, Chino, Cal.

**Ayrshires (registered)**—A few young bulls, heifers and cows in milk at a bargain for quick sale. A. MacMinn, Phoenix, Ariz.

**Young Holstein Bulls**, bred right, grown right, priced right. Creamcup Herd. M. Holdridge, Modesto, Cal.

**Sunshine Farm Jerseys**—Bulls from officially tested dams for sale. E. E. Greenough, Merced.

**Registered Holstein Bulls** of various ages for sale. Millbrae Dairy, Millbrae, Cal.

**Registered Jerseys**—both sexes for sale. J. R. Carhart, Fullerton, Calif.

### MACHINERY

**WHY BUY NEW? SAVE HALF** Material guaranteed. It's second-hand after used few times; but not worn out. **USED AND NEW GALV. AND REDWOOD TANKS**—2000, 3000, 4000, 5000, 6000, 10,000, 25,000-gal. redwood, about half-price; new 1000-gal. galv., \$35; 2000, \$48; used 5000 galv., \$75; 10,000 galv., \$150; 17,000 galv., \$250; 25,000-gal. redwood, \$35; many others guaranteed. **PUMPS, CENTRIFUGAL**, rotary, single, double-acting, deep well pumps. No. 2 Ames double-acting, fine, \$145; 50 brass cylinders all sizes; old-style pump head, 18-inch stroke, \$38; small Bulldozer, \$42.50; large size, 20-inch stroke, \$68; 24-inch Stearns pump, \$75; 2, 3, 4, 5 hor. centrifugals. No. 5 two-stage horizontal B. & J., good as new, cost \$400, our price, \$150; 25 others.

**Engine snaps**: 2½ h., \$39; 3 Foos, \$115; 18 Fairbanks, \$275; 34 Lambert, \$350. Many others.

**WINDMILLS, SPECIALLY PRICED** 8, 10, 12, 16-ft. sizes. Pump as much water as new ones, at half price; costs nothing for fuel.

**900-GAL. WAGON TANK AND WAGON**, \$90; 700-gal. galv. wagon tank, \$48; slip, \$5; lawn mower, \$6; low down tank pump, \$6; diaphragm pump, \$16; broadcast seeder, \$13.50; 60 ft. 10-in. riveted pipe, \$25; 4 gang Stockton plow, \$28; 8-ft. orchard disc, \$37.50; 14-in. sidehill plow, \$14; weeder, \$14; power sickle grinder, \$9; 4 gang 10-in. mouldboard, \$25; 4 gang and 5 gang Flying Dutchman disc plows.

**RANCH MACHINERY** Walking plows \$4 to \$14; two mowers, \$28, \$35; 10-ft. rake, \$22; 5-ft. Fresno, \$12 to \$14; two-wheel scrapers, bone grinders; 150 new discs for plows, half price. Harrows, cultivators, ½-in. cable, 6c; belting; sundries. DEMMITT CO., downtown office, upstairs, 120 N. Main. Yards, 816 Yale, Los Angeles.

**Gasoline Engines**, the largest stock of used gas engines in California from 2 h. p. to 100. Thoroughly overhauled. Machinery Exchange, 733 North Spring St., Los Angeles.

**Disk Plows**—Rolled Cold. Auto trailers built to order. J. O. Parrish, 359 South Garey Pomona, Cal. Phone 3182.

### WANTED

**Wanted**, by established California company, ten men with rigs preferred to solicit and collect in Central, Southern and Northern California, prefer resident agents who can work part or all time, good pay and several weeks work to right parties. Address J. H. Yetter, 115½ North Broadway, Los Angeles.

**Position Wanted** as manager of orange orchard. Best of references given. Geo. F. Whitmore, 1653 4th Ave., Los Angeles. Phone West 2368.

**Ranch or Poultry Work** wanted by a single man 45 years old. Good references. Box F., Care Cultivator.

### ENGINES

**Several New and Slightly Used Engines**, ARNOTT & CO., implements, 112 S. Los Angeles St., Los Angeles.

### GEES

**Mammoth Geese**, the kind you want Stock for sale. Chas. McNeely, Alpaugh, Cal.

### POULTRY

**White Leghorn Baby Chicks**—Broilers are now 34 cents per pound. A 1½ pound bird can be raised in 8 or 9 weeks and will sell for 42 cents. 1000 chicks, January and February are worth \$110.00. Heating brooder and feed will cost \$50.00. Total cost \$160.00. You can raise 850 of them, sell the whole flock at 42 cents, amounts to \$357.00, leaving \$197.00 profit in nine weeks. Raise some broilers and send beef and pork to our Allies. If we don't lick the Kaiser he will lick us. We are waiting for your order now. Broilers will not be any less this year. Lyon Hatchery, Gardena, Cal.

**Order Now**, pure bred White Leghorn chicks, 15c each until March 15th, then 12c. Eggs \$1.00 per 15; \$2.00 per 30; \$6.00 per 100. Big plant, best strains foundation stock, thousands of breeders, 20,000 feet under roof, green feed and fresh cut bone fed daily. Remember, the chick or egg cost is small compared to the feed cost, so get the best. Catalogue free. New ton Poultry Farm, Dept. 3, Los Gatos, Cal.

**Mission Hatchery Chicks**—January-February. R. I. Reds, Barred and White Rocks, Black Minorcas, Anconas, Brown Buff, White Leghorns. First class utility stock, well mated; hatched right in our large modern plant. 12,000 chicks weekly. Price and quality talk, see our free circular about them. MISSION HATCHERY, Box 17, Campbell, Cal.

**Baby Chicks** from my thoroughbred and carefully selected flock of S. C. White Leghorns. Orders booked no wfor spring delivery at \$12.00 per 100, \$110.00 per 1000. Only eggs from my own and fully matured hens used in my incubators. Correspondence solicited. J. R. Heinrich, Poultry Yards, Arroyo Grande, Cal.

**Spring Chicks**—We are booking orders now. S. C. White Leghorns only selected and fully matured stock that is bred to lay used in the breeding pens, which assures strong and vigorous chicks. \$12 per 100; \$100 per 1000. H. A. Schlotthauer, Exeter, Cal., Route 4.

**Penn's Quality Barred Plymouth Rocks** are correctly bred. Blood lines that produced the WORLD'S FAIR and other noted winners BOTH in Utility and Exhibition classes. Eggs and breeding stock. Catalogue. GOLDEN RULE POULTRY FARM, St. Helena, Cal.

**Our Business** is trap-nesting and breeding S. C. White Leghorns for more and better eggs. Breeding males furnished with a pedigree having particular reference to egg production of their progenitors. Chix and eggs for sale. Write for circular. Enterprise Poultry Ranch, Chino, Cal.

**"Finest Hatchery in the World," Baby Chicks**—White Leghorns, Rhode Island Reds. Settings, 100's, 1000's. Hatched right in our \$60,000 brick and concrete hatchery from our selected heavy layers. Reasonable prices. Stock, Eggs. PEBBLESIDE POULTRY FARM, Sunnyvale, Cal.

**200-290 Egg Leghorns**, Wyandottes, Anconas, Reds, Rocks, Minorcas, Orpingtons. Chicks, eggs weekly. Booking orders January, April delivery reduced prices. Cockerels that transmit laying qualities; \$3.00-\$10.00 profit per hen last year. C. Beeson, Pasadena, Cal.

**Baby Chicks**—We start in January to hatch those sturdy youngsters, like we had last season. We will have lots of them too, but please order early. White, Brown and Buff Leghorns, R. I. Reds, Barred Rocks, and Black Minorcas. Campbell Poultry Ranch, Campbell, Cal.

**Day Old Chix**—Barred Rocks, Rhode Island Reds, Black Minorcas, Brown Leghorns, Buff and White Orpingtons. Other popular breeds a matter of correspondence. Enoch Crews, Seabright, Cal.

**Hatching Eggs**—S. C. White Leghorns. Bred-to-lay hoganized birds from Pine Tree Strain. Fertility guaranteed. Eight years established and still growing. Address Pine Tree Farm, "C," Los Gatos, Cal.

**Poultry Wanted**—We pay the highest market price for all the local poultry we can get, no matter how large the quantity; also fresh ranch eggs. We remit immediately. National Poultry Co., 607 E. Third St., Los Angeles, Cal.

**Buff Orpingtons, Buff Leghorns, Bourbon Red Turkeys**—First prize winners at the best shows for the past four seasons. The Ferris Ranch, S. Reservoir, Pomona, Cal.

**Am Booking Orders** for chicks from Barred Rocks, R. I. Red and White Leghorn stock for spring delivery. Send for circular. Madera Hatchery, Madera, Cal.

**For Sale**—Rhode Island Whites, 2 dozen pullets in lots or entire lot, also a few cockerels. C. A. Pears, Box 233, Tulare, Cal.

**Baby Chicks** (White Leghorns) shipped on approval before remitting. No weak ones charged for. Schellville Hatchery, Schellville, Cal.

**Book Your Orders** for White, Brown or Buff Leghorns, Anconas, Barred or White Plymouth Rocks, Black Minorcas, and Buff Orpington chicks with the Stevenson Hatchery, Watsonville, Cal.

**"Eastman's-Bred To Lay"** Hoganized, Trap-nested, Barred Plymouth Rocks. JANUARY CHICKS. Eggs. Fairmead Poultry Farm, Fairmead, Cal.

**Official 200 Egg White Leghorns** in Washington Contest. Charles Hudson, Escondido, Cal.

**Booking Orders** for chicks, Brown Leghorns exclusively good egg strain. Mrs. G. M. Guerard, R. D. 3, Merced, Cal.

### MISCELLANEOUS

**Famous Hairy Peruvian Alfalfa Seed**—Highly recommended by U. S. department of agriculture. Only carefully selected seed shipped. Prices and samples gladly furnished on application. E. F. Sanguinetti, Yuma, Arizona.

**To Reduce the high cost of living**, send for our Wholesale to Consumer Catalogue. Smith's Cash Store, 113 Clay St., San Francisco.

**Quality Trees**, Seed Potatoes, berry plants, seeds, milk goats, Cash Nurseries, Sebastopol, Cal.

LIVE STOCK

Butte City Shorthorns, Shropshires, Berkshires and Ponies. Stock of all ages for sale. Can supply one or a carload. Get our prices and descriptions before buying. Butte City Ranch, Box C, Butte City, Glenn Co., Cal.

Young Bred Milch Goats, Due Fresh in the spring, \$25 each, also few matured Does. Inclose stamp for reply. M. A. Wood, 632 N. 3rd St., San Jose, Cal.

Registered Shires — Blackhawk Stock Ranch. Importers and Breeders. Easton & Ward, Burlingame, Cal.

For Sale—Eleven weanling mules. Chas. Hubbard, Riverdale, Cal.

AGRICULTURAL IMPLEMENTS

IMPLEMENTS AND RANCH SUPPLIES. Samples and slightly used. Four floors. Large stock. Liberal credit. Save 50 per cent on some. No branches. ARNOTT & COMPANY, INC., The Yellow Front. Established 1892 112-118 S. Los Angeles St. Los Angeles, Cal.

DUCKS

Indian Runner Ducks 280 Egg strain.—Baby ducks \$20, 100. Eggs \$6 per hundred. Rocks and Reds, \$15, hundred. Incubator 300 eggs, \$8. Expert hatcher will hatch and raise every variety of poultry on shares. Satisfaction guaranteed. Box 615, Inglewood, Cal.

LUMBER

Lumber—Sash—Doors—Plumbing — Supplies—Building materials of all kinds. New and second hand. A. R. W. shingles 55 cents per bundle. Send list for estimate. Dan P. (Mission Street) Dolan. 1620-1660 Mission Street, San Francisco, Cal.

TURKEYS

Our Geese and Turkeys Win Again — Grand Champion Sweepstake Special, for best pair of birds in show. For size vigor and quick maturity, our stock are best, East or West. Stock and eggs in season, also Collie pups. Correspondence solicited. John G. Mee, St. Helena, Cal.

For Sale—Bourbon Red Turkeys. A few young toms of extra fine stock. Eggs in season. John S. Adams, R. R. No. 2, Box 20, Pomona, Cal.

Giant Bronze Turkeys and Eggs—Choice breeding stock. M. M. Reiman, Planada, Cal.

For Sale—Mammoth Bronze turkeys. The Best in The West. Geo. A. Smith & Son, Corcoran, Cal.

For Sale—Bourbon Red and White Holland Turkeys. E. A. McKinley, Ukiah, Cal., R. D.

RECORD ASSOCIATIONS

The National Society of Record Associations recently held its annual meeting in Chicago, 15 record associations being represented by delegates.

Secretary Dinsmore reported that the executive committee had at a meeting March 3 completed the draft of recommendations re sanitary laws which had been furnished to stockmen in the different states where sanitary legislation was pending, and that these recommendations, representing the best information which the members of the executive committee had been able to compile, had been of considerable value in shaping legislation in different states. He called attention to the completion of the second case which the National Society of Record Associations had had before the interstate commerce commission. The hearing had been conducted before Examiner Disque of the interstate commerce commission last January, which took practically a week's time, and the case was subsequently submitted on brief and argument. Decision had just been handed down prior to the annual meeting under which the interstate commerce commission sustained its original decision in the matter of the shipment of live stock in L. C. L. lots in virtually all points, but that in the official classification territory the weights on larger animals had been slightly advanced over the weights set in the first decision.

It was resolved, that the interstate shipment of pure bred swine by express in crates be permitted when accompanied by an affidavit of the owner to the effect that said swine to the best of his knowledge and belief are not affected with cholera and that cholera has not existed upon the premises from which said swine have been removed for a period of not less than three months immediately prior to

date of shipment. Also that said swine have not been subjected to the serum and virus treatment within 30 days immediately prior to date of shipment."

Jess C. Andrew, of the American Shropshire Registry Association, was elected president; J. R. Pfander, of the National Duroc-Jersey Record Association, was elected vice-president; Wayne Dinsmore was re-elected secretary-treasurer.

TO ALL CALIFORNIA WOOL GROWERS

You are requested to attend the 10th annual meeting of the California Wool Growers' Association, which will be held at University Farm, Davis, on Thursday, Friday and Saturday, January 3, 4 and 5, 1918. The meeting will be called to order promptly at 1:30 p. m., January 3.

An interesting program has been arranged, which will include addresses and discussions on the following subjects: "Better Methods of Selling Wool;" "The Sheep Market and Its Future;" "Auction Sale of Rams;" "Feeding Sheep for the Market;" "Livestock Shipping and the Shipper;" illustrated lecture on "Sheep and the Forest Reserve," by Mr. Rachford, of the United States forest service. The entire evening Friday, after 7:30 o'clock, will be spent discussing "National Forests and Summer Grazing." A "Mutton" banquet will be served Thursday evening. Come and take a part in this meeting. Get the habit and you will regret it if you are forced to miss a meeting. Come and meet your old friends and make some new ones.—L. L. McCoy, president; Fred A. Ellenwood, secretary.

Queries

Questions to be answered in this department should be received at the office one week before reply is expected. Write plainly on one side of the paper and sign full name and address. Unsigned communications receive no attention.

Fertilizer For Walnuts and Peaches

What is the best fertilizer for walnuts and peaches next to stable manure?—Subscriber, Pomona.

This matter of fertilizing depends very much upon soil conditions, that is if the soil is deficient in humus, as probably it is, then in place of the stable manure which is unavailable other green manure crops must be used, or straw, damaged hay, or almost any form of vegetable matter. This may be worked into the soil either by plowing or disking. It is too late this season for most of the green manure crops. One might plant rye or barley and perhaps get enough crop with the late spring rains to put a few tons of green stuff under. This lightens up and helps soil. If green manure crop is planted a quick acting commercial fertilizer would be beneficial. After the soil has been fairly well supplied with vegetable matter, benefit would be secured from the application of complete fertilizer directly to the trees, but this should be later in the season, say about March or April.

Ducks Dying

Can you tell me the cause, also the cure for the disease of my Indian Runner ducks? They are dying at the rate of six or seven a day out of a flock of 50. They are fat and healthy in every way that I can see. They drop dead shortly after being fed. Am feeding chopped alfalfa, bran, rolled barley and milo.—Subscriber, Delano.

Have your ducks been running too much in the hot sun? Sunstroke often

kills ducks in just this sudden fashion. Being fat they would be more susceptible to such an attack than if they were thinner. If they have been running at large, it may be they have eaten something poisonous. Salt from an ice cream freezer carelessly thrown on the ground has killed many ducks. I hardly think the trouble is in the ration, but if you are not moistening the bran and barley you would do well to do it. Soft feed is much better than hard for ducks. Ducks cannot be doctored. Removal of the cause of disease is the only cure.—J. A. K.

Purity of Breeds

After three breeds of poultry have been running together how soon after being separated and properly mated may purity be expected?—Subscriber, Pomona.

Some breeders believe that when a hen has mated with a male of a different breed the strain is never completely eradicated but may show occasionally for the rest of her life. Others hold that purity may be expected as soon as the fertility which resulted from that mating has disappeared. I should not like to sell hatching eggs from such a hen unless I had first tested them myself, but there seems little likelihood of such a strain remaining after a month's time.—J. A. K.

Not Growing Tobacco

As there have been many inquiries from prospective planters of tobacco we have taken pains to make some inquiries as to the success of former efforts in this line in this state, and so far as we can learn there is no planting of any extent at the present time. From Secretary A. E. Miot of the Tulare County Board of Trade, we have the following:

"The tobacco industry collapsed several years ago. Just why we could never tell. Experiments were made and pronounced satisfactory; then much planting was done for several seasons,

and the prices paid for the tobacco were satisfactory—then all at once the industry blew up for lack of a market; we had plenty of tobacco but no buyers. For this sudden change in the market we have never been able to account and no satisfactory explanation has ever been given."

Walnuts Burning

I have some 15 year old walnut trees, thrifty growers, that set a good crop of nuts every spring but invariably get burned later in the season. Would it be advisable to top-graft these trees over, and what variety would be more heat resistant? If so where could I secure scions of the variety recommended?—Subscriber, Pasadena.

Hot weather cannot be the sole cause of the apparent burning of the walnuts when it takes place every year, as good walnuts are produced in the vicinity of Pasadena. Further data would be necessary before an opinion could be given, but it is quite likely the trees do not have sufficient water in the latter part of the summer. Water enough should be applied to keep the soil moist to a depth of five feet at all times, and this should be determined by occasionally digging a small hole with the shovel.—J. B. N.

More general demand is being made on the forest ranges for pasture next summer, and it is now anticipated every forest reserve will be filled to its limit.

## Get the most out of your Cover Crops Plant Now!

Right now is the time to plant your cover crops in your orchards, your groves or vineyards. Get them at once so as to benefit by the winter rains. We recommend *Bitter Clover*, *Vetch*, *Burr Clover*.

The heavier your cover crop, the more nitrogen you will put into your soil—the more you will increase its fertility—the larger will be the yield from your trees and vines.

Cover Crops conserve moisture. Plant yours now and be prepared against a dry winter.

Our long experience has taught us what cover crops will succeed best in your locality. Just tell us on a postal what kind of trees or vines you have. We'll give our recommendations and quote prices gladly.

Our 1918 Garden Guide is ready. It tells all about Morse Seeds for your fields and garden. To your wife it has a special message about flowers. Write for your copy today—it's free.

## Marketing Honey

Written for California Cultivator By E. Ralph de Ong

HERE are two ways of preparing honey for the market, extracted honey\* and comb honey. The latter sells for a higher figure but requires more skill and time on the part of the beekeeper and considerable extra honey for its production. Comb honey is also more difficult to market, especially to ship 100 miles or more, than extracted honey, but if a local market is available these factors are really a benefit to the small beekeeper. His time in the apiary can be spent to a better profit, there being an abundant opportunity for skill in producing large amounts of honey and marketing it in a neat package and working up a retail trade, for with this type of package it is not difficult to persuade even a suspicious person that there is no possibility of adulteration.

Extracted honey lends itself to production on a large scale, it being less intensive, requires less skill, less danger of swarming, smaller supplies of nectar will be utilized by the bees, and less skilled help is needed in handling the crop. After the honey has been extracted, the empty comb, known as the "drawn comb" is return-

ed to the hive for refilling, thus conserving the honey and time of the bees that would be used in building wax. A crop of extracted honey is very easy to market, the usual custom being to use a wooden case containing two five gallon tin cans. These when filled makes a convenient sized package for handling and may be shipped any distance without danger of impairing its value. Retail trade usually requires a small package, generally of glass, as this makes an attractive article. The pure food laws have done much to establish confidence in the public as to the purity of extracted honey, and as it sells cheaper than comb honey the demand for it is constantly increasing. Bakers and confectioners are using increasing amounts of honey, especially the cheaper grades; restaurants can often be interested in cheap honey as a basis for table syrups, not to be sold as an adulterated article, but simply a high class, pure table article. Some progress is being made towards a more modern system of honey marketing which will make it easier for the beekeeper to market his product without being at the mercy of the speculator, but much is still to be done along these lines.

## How to Draw a Farm Lease

QUESTION often coming to the Cultivator has to do with form of lease and method of division of returns from leased land. We note in "The Farm Journal" a form used in Pennsylvania and other Eastern states. This does not apply in its entirety to many sections of California but it has suggestions which may prove of value to land owners and tenants.

Make two copies and sign both; the tenant keeps one, the landlord the other:

### Form of Lease

This Agreement, Made this . . . . day of . . . in the year . . . , between . . . party of the first part, and . . . party of the second part, provides as follows:

1. The party of the first part leases, for the consideration hereinafter stated, to the party of the second part, the following described land and premises: . . . . : To have and to hold the same subject to the conditions and limitations as herein agreed upon, for a term beginning the . . . day of . . . 19 . . . , and ending the . . . tion that the same is renewed from year to year under the same conditions should neither party notify the other in writing of his wish to terminate this lease . . . months before the end of the lease year.
2. It is the desire of the contracting parties to conduct the general business of crop production, stock raising and stock feeding on the above described farm; the general plan of crop rotation to be as follows: The land to be occupied by corn for two years, small grain to follow the corn for one year, and the small grain to be succeeded by two years of grass or tame hay.
3. The party of the first part, or farm owner, will furnish all the material necessary to keep the buildings, fences, and other improvements in good repair, and he will pay for such skilled and mechanical labor as may be necessary in making repairs or constructing needed new improve-

ments, and will also pay all taxes on the land and buildings of said farm, including the farm road tax.

4. The party of the second part will furnish all work animals, labor, machinery and tools necessary properly to equip said farm, and will maintain them at his own expense, except that he shall be allowed pasture in season for a reasonable number of work animals, not to exceed . . . in all. The party of the second part agrees to plow, sow, till, plant and cultivate said land in a good farmer-like manner and in the proper season; to put into crops all land that is not seeded down; to harvest all crops in their proper season; to haul out and scatter on the proper fields, most in need of it, all manure produced on the farm, by the first of November each year; to mow the roadside, to cut the briers, and to keep all noxious weeds from going to seed on the farm. He also further agrees to do all the work, not requiring the services of a skilled mechanic, of repairs to buildings and fences, with the materials furnished by the party of the first part and free of charge to him. He also agrees to haul all material used on said farm and to haul all the products thereof to market, free of cost to the party of the first part.
5. The parties to this agreement shall each bear one-half the expense of providing the farm with stock for breeding and feeding purposes, such stock to be of the kind and breed agreed upon, and to the amount necessary to stock the farm with a view to providing sufficient stock to consume the surplus crops grown thereon; they will each pay for one-half the feed purchased for consumption by such stock; they will each pay one-half the taxes and insurance on their undivided property, for one-half the machinery work of the threshing bill, for one-half of all grain or grass seed and fertilizers used on said farm, and one-half the veterinary bill for caring for their jointly owned live stock.
6. All animals raised for sale or

purchased for feeding shall be fattened and disposed of when ready for market at such times as may be mutually agreed upon by the parties hereto. No farm products shall be sold except by mutual agreement, and when such sales are made, whether of livestock or of crops, the proceeds shall be divided equally between the parties hereto.

7. The party of the second part shall not sublet the farm or any of the fields thereon without the written consent of the first party, and the first party reserves the right of free entry upon the premises for the purpose of making improvements thereon, and to plow or till certain fields after the crops have been removed, in case the lease is to be terminated.
8. It is agreed that the second party shall have the use of the garden on the farm, shall be allowed to raise a reasonable amount of poultry, not, however, so as to interfere with the proper management and working of the farm, and shall be allowed pasture for not exceeding . . . cows for his own use.
9. It is further mutually agreed that at the termination of this lease, if other means of settlement fail, the party of the second part shall divide each class of the jointly owned livestock into two parts, and the party of the first part shall have choice of taking either of these parts as his own; and if a price can not be agreed upon for the second party's half of the straw and fodder, which it is agreed shall be left on the farm, it shall be bought by the first party at a price to be fixed by two disinterested persons of whom each party to this agreement shall select one, or in the event of their failure to agree, at the price fixed by a third whom they shall select.
10. Witness our hands this . . . day of . . . in the year 19 . . .

### TRACTOR SHORT COURSE

A short course in the management of gasoline tractors will be held at University Experiment Station, Riverside, during the week of February 11-16, 1918.

Owing to the rapid increase in the use of tractors and the war demands for drivers, qualified operators are hard to find and high wages are offered. Experience has demonstrated that the life of a tractor depends in large measure on the management given it, and the loss due to inefficient operators is very heavy.

For the past two years the university has conducted a successful course in tractor management at the university farm at Davis. The demand now seems so great that a repetition of the course is offered at Riverside.

Shop and lecture work will be offered on such fundamental questions as lubrication, care and adjustment of bearings and carburetors, grinding of valves, repairs and replacements. Several of the leading makes of tractors will be available for demonstration and practice work.

A registration fee of \$1.00 constitutes the only charge for the course. Any one may register. Applications should be sent to Dean, Citrus Experiment Station, Riverside.

When Paris was threatened and its downfall seemed almost certain in 1914, General Joffre commandeered all autos, trucks and taxis, and conveyed hundreds of thousands of French soldiers to the Marne where the advancing Teutons were stopped and one of the world's greatest battles won—by the auto.

## Early Chicks Are Best

Written for California Cultivator By G. W. Kretsenger

WITH eggs selling at 50 and 60 cents a dozen and feed costing three to four cents per pound, there are going to be very few early chicks hatched, for the poultryman feels that it is a waste of good money to set 50 cent eggs when he needs ready cash to pay his bills.

If the poultryman knew the several advantages of early hatched chicks he would set eggs in December and January regardless of cost, for he would realize that the increased returns received in the fall would more than offset the high cost of setting eggs in January and December. At the present time it is costing about 30 cents a month to feed a hen, so unless there are some good layers in the flock our expenditures are going to so-exceed our receipts that it will take some very heavy spring laying to make it possible for the producers to break even.

It has been proven by several experiment stations that it is the early hatched chicks that make the best winter layers and are therefore the best money makers. It is the January chick that produces the greatest number of eggs during the fall and winter. The later the chicks are hatched after this month the poorer the results the following fall and winter.

Many poultrymen object to the early hatched chicks because they claim they pass through a long molt in August and September, during which no eggs are laid. It is true that January and February chicks are more apt to molt than the April and May chicks, but the duration and extent of the molt depends to a great extent upon the management of the flock. If the chickens are properly handled and fed the early hatched chicks will have a molt of short duration during which time only a few of the neck feathers are lost. It is usually the early hatched chicks that have been forced to lay at four to five months of age that passed through a complete molt in September.

The wise poultryman should not allow his pullets to start laying until

nearly six months of age, for he knows that by allowing his pullets to come to maturity he will produce hens that will be superior to the hen from pullets that have started to lay at four months. Often the four months old laying pullet remains a pullet all her life, that is, her sexual organs never develop and she lays a pullet or semi-pullet egg all her life.

If there is any tendency for the young chicks to lay at four months of age they should be put on a ration of grain and bran until fully mature. By bringing our chickens to full maturity before allowing them to lay we can to a large extent prevent our yearling chicks, no matter when hatched, from passing through a complete molt.

There is another advantage in early hatched chicks that is not often considered, and that is the cockerels from January chicks sell in March at a price that would usually pay for the raising of both pullets and chicks to the age of three months. In March the January hatched cockerels weigh one to one and a half pounds and sold during the years of 1915-16 for from 35 to 45 cents a pound. During March cockerels bring a higher price than during any other month in the year, so it ought to be the aim of the poultryman to get his cockerels on the market at this time. The cockerels from the April and May chicks are sold at from 20 to 25 cents per pound, which often does not pay their own expenses, let alone the expense of the pullets.

If the poultryman is to produce winter laying pullets and cockerels that will be in marketing condition during March and early April, he should be overhauling his incubator at the present time with the idea in mind of getting hatches off during the early and middle part of January, even though at the present time it seems to be rather an expensive operation to start our incubators going. All experiments so far have proven that it is the men who are producing January and February chickens that are making the greatest profits in the chicken business.

## The Profitable Flock

Written for California Cultivator by Jean A. Koethen

P OULTRYMEN who would increase the returns from their flocks must increase the average production of the flocks.

This, according to Helen Dow Whitaker of the Washington experiment station, is the one great lesson of the first Northwest Egglaying Contest which closed October 31. A flock average of 120 eggs should mean a return over feed cost of \$1.80 per bird, but if the egg yield is increased above 120 eggs per bird the returns over feed approach the \$5.00 mark.

In this contest there were 47 hens whose eggs sold for \$6.00 or over, and 16 pens of five birds each whose eggs sold for upwards of \$25. Many other hens laid eggs that sold for \$5.00 or over per bird. The hens counted the best layers were not necessarily those which laid the largest number of eggs, but those whose eggs brought the largest returns. All three medal winners were White Leghorns. Hen No. 1 laid 230 eggs which sold for \$7.77. Hen No. 2 laid 237 eggs, but they sold for three cents less than those of No. 1. Hen No. 3 laid 224 eggs which sold for \$7.62.

The three best pens were also White Leghorns, but some hens of

other breeds made nearly as good individual records as the Leghorns. An Oregon laid 197 eggs; an Ancona, 184; a Salmon Faverolle, 192; Barred Rocks laid 198, 197, and two of them 192 eggs each respectively; Reds laid 232, 207 and 195; and a Rhode Island White laid 195 eggs. This, in Mrs. Whitaker's opinion, is sufficient evidence that egg production is not a question of breed but rather of the breeding back of the strain. Any such high producer, mated to the son of a high producer, may be made the foundation for a flock of heavy layers.

### STORRS EGG LAYING CONTEST

Storrs, Connecticut, December 12, 1917. Report for the sixth week ending December 12, 1917:

The hens in the laying contest at Storrs are still not able to quite equal last year's performance. In the sixth week birds laid a total of 1613 eggs, or a little more than 100 better than the preceding week. This brings the total to date up to nearly 8000 eggs. There are still six pens that have not been able to get started. On the other hand, there are 33 pens that have laid over 100 eggs each, and one of these

has laid more than 200 in the first six weeks of the contest.

During the first month each pen of ten birds averaged consumption of nearly 19 pounds of grain and 49 pounds of mash, or in other words, each pullet ate a little less than seven pounds during the month. The relatively high amount of mash consumed is of importance for two reasons. In the first place the milled feeds have been lowered in price, and not only this but hens can reasonably be expected to lay more eggs when fed a good rich mash.

The three best pens in each of the principal varieties are as follows:

#### Barred Plymouth Rocks

Jules F. Francois, 184; Rock Rose Farm, 144; Harry H. Ober, 110.

#### White Wyandottes

Obed G. Knight, 174; Brayman Farm, 174; J. Frank Dubois, 125.

#### Rhode Island Reds

Pinecrest Orchards, 195; Flintstone Farm, 142; W. Mansfield Poultry Farm, 123.

#### White Leghorns

Hollywood Farm, 189; Braeside Poultry Farm, 189; J. Frank Dubois, 178.

#### Miscellaneous

Cook & Porter, (Buff Wyandottes), 213; Oregon Agricultural College (Oregons), 199; Dr. N. W. Sanborn (Buff Wyandottes), 114.

### SUGAR USED IN MAKING CANDY IN UNITED STATES

The sugar used for making candy in the United States, according to information obtained by the food administration, is sufficient to meet all the sugar requirements of England under the rationing standard adopted there.

If the people of the United States would cut out the eating of candy the sugar saved would be more than sufficient to meet all the sugar requirements of France.

If one-half the sugar used in the making of candy in this country in 1917 could have been saved it would have been sufficient to meet the sugar requirements of Italy for a year under that country's present sugar standard.

The money spent for candy in the United States in the past year is nearly double the amount of money needed to keep Belgium supplied with food for a year.

Of the total sugar consumption of the United States, according to the best estimates obtainable, about one-third goes into the manufacture of various foodstuffs, including confectionery, while the remainder is consumed as sugar. The amount of sugar employed in the making of confectionery is variously estimated from 150,000 to 500,000 tons per year. There has been compiled no absolutely accurate data from which the exact amount may be determined, but a conservative estimate would place this at somewhere about 400,000 tons per annum.

The confectionery business of the country, measured by the value of its product, is about two-thirds as large as the butter business, a little less than one-third as large as the wheat flour business, slightly larger than the canning and preserving of fruits, and about two-fifths as large as the bakery business.

Lots of men can tell the railroads how to run their business, but put them in exclusive control of a wheelbarrow and they'd break their shins, front teeth and the second commandment.—S. P. Bulletin.

Every ball of the YUBA TREAD kept at work at food production helps as much as a hundred balls flung into German trenches.

### The Best Feed on the Market

Has the highest protein at the lowest price \$2.90 per 90-lb. bag, subject to market changes; see that your hens eat as much Dry Mash as they do grain; feed them lightly of grain in the morning and make them work for it; either have a scratching pen or spade up a part of the ground and rake the feed under; keep "A-1" Dry Mash in a dry form before them all day; about one hour before feeding them their grain in the evening WET their Mash and let them eat all they will; put it on top of the Dry Mash, then feed them all the grain they will eat; this stuffing process will give them a full crop to carry them through the long night of inactivity; analysis is printed on every bag; give it a trial. Rough rice, 100 lbs., 3.50@3.60 to growers at shipping points.

## HAY

Under date of December 22, Scott, Magner & Miller says:  
Arrivals of hay for the week have been 1116 tons. Prices in San Francisco have remained practically unchanged. The railroad situation continues as difficult as heretofore.

The government has placed further orders in California for shipments outside of the state. If large quantities are taken for government purposes and our stocks of hay on hand are cut down to that extent the question arises as to whether our stock on hand is large enough to stand a continuous drain in this direction and still take care of all local requirements as well as to be able to furnish hay in the districts where it is needed to sustain herds of cattle that have no pasture.

We are facing a serious situation on account of lack of grass and this matter has had the attention this week of government representatives. The stock of hay on hand at the present time is believed to be about the same as we had on hand at this time a year ago. Last winter much hay was used to carry cattle along and with the same condition confronting us now it is thought that we have enough to carry us through this season unless large quantities may be permitted to be shipped out of the state. The crop is short this year throughout the Pacific Coast states as well as in Arizona, Texas and New Mexico.

The prices on hay all over the United States are approximately \$30 per ton. The situation to everybody feeding stock is serious throughout the entire country.

## Citrus Fruit Market

Los Angeles, December 26, 1917.

With holiday demand and light supply, orange have been sailing. Some Navels from Central California have sold around \$6.00 and \$7.00. Tulare and Northern California orchards are practically cleaned up on Navels. Shipments from southern points will not begin to any extent until after the new year. The lemon market has also been exceptionally good.

Shipments since November 1, 1917, Southern California: Oranges, 2081 cars; lemons, 446; total, 2527. To same date last season: Oranges 2202; lemons, 655; total, 2867. From Central California: oranges this season, 1489; lemons, 51; total, 1540. Same date last season: Oranges 3222; lemons, 96; total, 3318. Northern California: Oranges this season, 165. To same date last season, 756.

## AT THE AUCTIONS

December 19  
New York: Both Nav. and Val. higher. Val. \$3.10-\$4.30, Nav. \$3.46-\$5.15, Lem. \$3.30-\$4.85.  
Cleveland: Nav. \$3.50-\$5.85, Tang. \$2.75, Lem. \$6.50.  
Boston: 2 cars, higher on Val. Val. \$3.80-\$4.95.  
Pittsburg: 7 cars. Val. \$3.70-\$4.75, Lem. \$2.85-\$3.05.  
St. Louis: 6 cars. Val. \$3.35-\$4.95, Nav. \$3.45-\$3.85, Lem. \$2.75-\$4.55.  
December 20  
New York: 5 Nav. 3 Val. 1 Lem. Val. \$3.30-\$5.00, Nav. \$3.15-\$5.00, Lem. \$2.90-\$5.15.  
Boston: 5 cars. Nav. \$3.95-\$5.00.  
December 21  
New York: 6 Nav. 1 Val. Nav. \$3.10-\$5.10, Val. \$2.75-\$5.10, Lem. \$2.70.  
Cleveland: 1 Val. 2 Nav. Val. \$3.50-\$4.80, Nav. \$5.45-\$6.15.  
Boston: 3 cars. Nav. \$4.00-\$5.20.  
Cincinnati: 2 cars. Nav. \$2.10-\$3.95.  
St. Louis: 1 Val. 1 Lem. Val. \$3.50-\$4.80.  
Philadelphia: 2 oranges, 1 Lem. Nav. \$2.45-\$3.00, Lem. \$2.35-\$4.15, Val. \$2.75-\$4.75.

## MARKET NOTES

Postcard reports to the bureau of markets of the United States department of agriculture show shipments from California during the week ending December 24 approximately as follows: Apples, 8 cars; cabbage, 3; cauliflower, 29; celery, 61; dried fruits, 109; dried figs, 2; garlic, 1; grapes, 1; lettuce, 35; mixed fruits, 4; mixed vegetables, 33; olives, 1; onions, 18; peas, 1; potatoes, 89; raisins, 158; sweet potatoes, 5; tomatoes, 1; turnips, 1.  
The rumor which gained circulation to the effect that California fruits might be placed in the non-essential food class is emphatically denied in Washington, and it is now asserted will be given equal showing in the matter of transportation. This is strengthening the fruit market and aiding in planning another year's work.  
Washington asserts that some canners have been hoarding stocks awaiting higher prices. This especially of meat packers.  
Early Navels and the latest of Valencia never commanded the price received this year.  
The campaign to secure 100 cars of apples for soldiers in the trenches ended entirely satisfactorily.  
State Market Director Weinstein is aiding in securing just returns to the producers.  
Portions of Southeastern United States were hit by a severe frost, seriously lowering the lettuce output and practically killing the young radish crop. Beets

were not so seriously injured. Snow fell as far south as Memphis.

The car situation has generally improved and the movement of potatoes into Chicago has been more general.

All dried fruits are holding remarkably firm and even an advance of one cent is noted on evaporated apples.

The food administration is keeping a line on the potato movement by requiring every handler of potatoes in carlots to operate only under federal license.

#### CLOSE SHAVE

"Mamma," said little Elise, "do men ever go to heaven?"

"Way, of course, my dear. What makes you ask?"

"Because I never see any pictures of angels with whiskers."

"Well," said the mother, thoughtfully, "some men do go to heaven, but they get there by a close shave."—San Francisco Monitor.

If your meat grinder seems dull, grind a piece of scouring brick through it.

Luck may turn against a man, but work never does.

## Gas 'em!

Gas 'em with Carbon Bisulphide quick'y, easily and economically.

One burrow of squirrels will destroy more grain than your family can save in fifty wheatless days. Remember—these ground pests cost the farmers of the Pacific Coast more than \$6,000,000 last summer. So be forehanded—be truly patriotic—conserve the seed in your fields.

The University of California says: "From November until the end of February (the rainy season in California) the best way to attack the ground squirrels is to fill their burrows with gas from Carbon Bisulphide."

So too in other states! If the ground is full of moisture, whatever the month may be, Carbon Bisulphide is the best killer of squirrels, prairie dogs, gophers, etc.

A squirrel killed before March is worth a dozen killed later. Because—most young squirrels are born late in March or early in April. So gas the old squirrels now. Write today for prices and interesting folder telling how Carbon Bisulphide—the profit-saver—works.

SANTA BARBARA COUNTY  
HORTICULTURAL COMMISSION  
SANTA BARBARA, CALIFORNIA

Pacific Soap Company,  
Los Angeles, Cal.

Gentlemen:  
We have had an extensive trial, amounting to a commercial use of your P. S. C. ROSIN SPRAY.

In this use we have treated red scale, purple scale, black scale, red spider and aphids and wherever used the results are entirely satisfactory to the writer and to his inspectors, who in a large degree are responsible for the commercial control of pests in the county.

I believe the spray is a great improvement over fumigation or any other method of scale control that has been in use for the last twelve years.

Yours very truly,  
(Signed) C. W. BEERS,  
Horticultural Commissioner.

### ANTS, FRIENDS OF THE CITRUS MEALYBUG

ANTS are great friends of the mealybugs which do such serious damage to lemons, grapefruit, and oranges in California. These ants keep certain brown lacewing flies and ladybird beetles—natural foes of the mealybug—from attacking and killing this citrus pest. For this reason entomologists of the United States department of agriculture, in Farmers' Bulletin 862, advise grove owners to keep ants off the trees by painting a band of paraffin around the trunk and cover this band with a mixture made of finely powdered flowers of sulphur and tree-banding sticky material. The entomologists also advise the use of poisoned syrup to attract and kill the ants. If the ants are kept out of the trees, the natural enemies in many cases will control the mealybug to a point where its damage will not be commercially important.

The use of fumigation and spraying

A Modern Fumigating Outfit

Throwing the tent over a tree. The chemical handlers are shown in the background, ready to insert the hose carrying the gas under the tent as soon as it is arranged. (See article on Page 654.)

methods was also investigated. It was found that fumigation with hydrocyanic acid gas, while effective if repeated a number of times in somewhat larger doses than are used in control of the black and red scales, is not commercially practicable. Its use is recommended only where there are very few trees, or in yards where expense is not an important consideration.

Spraying with cresolated distillate emulsion and with soap-powder emulsion was found to be effective, provided the spray was applied with considerable force and not merely sprinkled on the backs of the bugs. These sprays, however, can be used only during the cool months of the year, either when the fruit is maturing or after it has been picked. The sprays are too strong to use during the hot weather or when the trees are laden with immature fruit.

Spraying with plain water under pressure sufficient to dislodge the mealybugs from the trees has been found effective by many growers. This method has the important advantage that it can be used safely at all times.

Whether trees are fumigated or sprayed, however, every effort should be made to encourage the natural enemies of the mealybug. In many cases, the entomologists believe, undeserved credit is given to insecticides when, in fact, the lacewing flies and ladybird beetles unobserved by orchardists really are responsible for the control of the bugs.

The bulletin contains explicit directions for making and using the sprays and suggests definite schedules for handling different kinds of

citrus trees under various conditions. As a last word the bulletin cautions growers whose trees are clean not to use picking boxes which have carried infested fruit until they have been fumigated with hydrocyanic acid gas and not to allow laborers to use picking sacks, gloves, and jumpers which may carry mealybugs until these articles have been soaked in gasoline for five minutes.

#### SOLDIERS GARDENS

WHILE in training English Tommies find satisfaction in growing their own gardens. Through one of the Cultivator contributors, A. R. Gould, we have from one of his friends in England's training camps, the following regarding these war gardens. He first refers to receiving interesting numbers of the California Cultivator and says farm papers are always interesting, especially the advertisements. This is according to the belief of the editorial department notwithstanding it does its best to make

the columns as interesting as possible, but seriously, the advertising columns of any paper, as advertisements are made these days, are most interesting.

The following is quoted direct from Corporal T. A. Weston's letter: "You'll note I'm still in England and at intervals am able to get home to Orpington for brief spells. Was home for five days two weeks ago and got up my spuds and did other jobs. Fruit crop poor this season for some reason due, no doubt, to my not being at home to spray just when needed. Generally speaking the crops everywhere are good, though the wet August did a lot of damage, for the gales were suited to October. Just now weather is lovely and my camp gardens are great. Our sergeant major reckons we have the finest canvas camp in the country. Flower beds like a park, all my own planting, barring a few patches around some tents. My own tent is a picture, mostly antirrhinums (snapdragons), and a most gorgeous show. We've also nearly two acres to vegetables, and I guess we shall harvest some ten tons of spuds plus tons of cabbage, swede, parsnips, etc."

## The Cultivator Patterns

8408—Ladies' Shirtwaist. Cut in sizes 36, 38, 40 and 42 inches bust measure. This is a semi-tailored waist having rather a full collar and a soft detachable collar.

8604—Girls' One Piece Dress. Cut in sizes 8, 10, 12 and 14 years. The dress is in one piece from shoulder to hem, but it is held in at the normal waistline by a narrow leather belt.

8620—Ladies' Tunic Waist. Cut in sizes 36, 38, 40 and 42 inches bust measure. The back of the waist is perfectly plain, and the tunic is side pleated.

8139—Ladies' Shirtwaist. Cut in sizes 36, 38, 40 and 42 inches bust measure. This is a simple blouse waist with lace-edged collars and cuffs.

8594—Ladies' Bolero Dress. Cut in sizes 34, 36, 38 and 40 inches bust measure. The bolero has the side closing, and the two-gored skirt is gathered all around to the underwaist.

8635—Children's One Piece Dress. Cut in sizes 1/2, 1, 2 and 3 years. The lower part of the dress is gathered to the yoke all around.

8417—Boys' Russian Suit. Cut in sizes 2, 4 and 6 years. The blouse is in the new length, and the usual straight trousers are included in the pattern.

PRICE OF ANY OF THE ABOVE PATTERNS 10 CENTS EACH.

### HOW TO ORDER PATTERNS

Write your name and address plainly in full, give correct number and size of each pattern you want, and send 10 cents in coin or (1 or 2 cent) stamps for each number. In order to furnish our readers with the very latest New York City styles, all pattern orders are filled in New York City. Therefore, we promise to deliver all patterns ordered within two weeks; we guarantee safe delivery of all patterns. Address

### A MAN IN OUR TOWN

Written for California Cultivator

There is a man in our town  
Who thinks he's wondrous wise.  
When Hoover says "Tis meatless day"  
He shuts up both his eyes.

He sees not, hears not, will not heed,  
But sits him down to think:  
"Now, isn't there some better way  
To plan to eat and drink?"

Says he, "I'll have my meat,  
No matter what they say.  
I'll buy me more the day before.  
For Me no meatless day."

He grunts and growls and wonders why  
This thing has got to be.  
The law should be as he desires  
And each one's will be free.

To bonds and loans and Red Cross drives  
He never gives a cent,  
On "running down" the other man,  
His mind seems ever bent.

But wait, old man, you'll Hooverize  
And pay your debt in full.  
You'll say too much and "get in bad"  
The U. S. you can't "bull."

### WASTE ACRES

Written for California Cultivator  
By Maude Barnes

**N** PASSING through a desert country the burning sands, cacti, sage, and mesquite meet the eye, and an occasional glimpse of a cultivated spot is a relief. When such a country is our home we see more than we do by passing through it and learn some of the secrets it knows so well how to guard.

The desert charms. The beautiful sunrise, the sunsets, and the stillness in God's untraveled country make an indelible imprint on the brain. The thought of the rushing cities, the greed for wealth and position fade away, and contentment comes.

Here the magic artist, Mirage, stretches out his brush and touches the sandy wastes, turning them into alluring, ever-changing blue lakes with beckoning trees around their borders inviting the thirsty to drink of the clear waters at their feet.

The desert is jealous of her children. When one returns to the outer world she still holds an influence over him. As time passes he may think he has forgotten, but a longing unbidden will come for the desert's peace and quiet, the flight of time unnoticed and the drowsy content he once knew. It may be only a dream of brown acres surrounded by vari-colored hills with purplish mists around them, but it is the power of the desert that brings the vision.

On the Colorado desert almost 200 feet below sea level, near the Salton Sea, is the little town of Mecca. Here the iron monsters that bring the trains from the East and West pause for water as did the stage coach of long ago. The Spanish padres as they journeyed from Mexico to California's coast stopped here also to rest and refresh themselves. Giant palms wave their fan like branches, bringing to mind scenes in far distant lands.

By following an unused road that leads to the south of Mecca, the traveler will come to a homestead. Beaten paths lead from all directions to an artesian well which still sends out a small stream. Here the wild animals of the desert and hills come for water. The paths are worn smooth from the many feet which travel over them. By a row of cottonwood trees stands a little cabin with its door opened wide. Directly in front of the doorway is a baby's high chair.

Evidences of a hasty flight are apparent. A trunk is in the center of the room. Part of its contents are strewn around. On the table are dishes placed ready for a meal, but

over all is drifted the sand of the desert, and as plainly as Time can write his mute message, it is written for all to read who will, that many a year had passed since the little high chair was occupied or a fire burning on the hearth.

With the first settlers to go and take up claims in the Coachella Valley went Charles Vendon with his wife and baby. Leading them on was the thought of a home and watered acres and plenty for the years to come.

Success favored the putting down of a well on the selected home site, and out of it flowed a stream of clear water. Soon around the new home there were signs of vegetation. With her own hands Mary Vendon planted a row of cottonwood sprouts leading out to the well, and looking into the future she could imagine the trees they would make and almost feel the grateful shade they would cast.

From the Martinez Indian Reservation a short distance away, Charles Vendon procured help for clearing away the brush on his claim. Jose Manuel was one of the men who came to work, and often his daughter Sitka came with him. The Vendon baby won Sitka's attention and then won by it's baby wiles, her heart.

Week by week and month by month found the Indian girl more and more at the Vendon home. In her love for the baby and its mother Sitka displayed the silent determined way of her people. She was ever guarding them from the harmful things of the desert. She watched the improvements on the homestead and knew to the very day when the time would come for the Vendons to "prove up," and claim the land.

When the last spring came before the final proving up on the claim and carpeted the desert for miles around with delicate flowers and soft breezes stooped to kiss them, Mary Vendon closed her eyes and across many miles her mind traveled to an Eastern farm she could see with a row of lilacs in front of a white farm house.

Surely she could smell their perfume! In reality she knew it was the scent of the buckthorn carried to her on the breeze that had brought her day dream.

The Overland for the East had just left Mecca. On the rear platform of the last coach stood a woman holding in her arms a child who was waving a handkerchief to a man and an Indian girl.

"Sitka, we are left behind, but a visit to the old home will do Mary good and make her dream come true. It will not be long until they will come back."

Sitka's eyes were dim as she untied her horse and without a word mounted and road away to the reservation. Every week after Mrs. Vendon's departure Sitka would come for news of the absent ones.

In the land of little rain the miraculous touch of water to the soil, and the planting of seed, aided by the sun's warm rays, had changed the barren land to fruitful acres. All around the little house crops were growing. Sweet potato vines covered the porch, and the cottonwood trees were beginning to fulfill their promise of shade.

One day Sitka found the house empty and on the baby's high chair by the door was pinned a note: "Have just got word that Mary and the baby are ill. Hope to catch the Overland that is almost due. Sitka, look after the ranch. I'll be home soon."

Week followed week, and Sitka looking for the Vendon's return, cared for the ranch as best she could. At last a letter came saying: "Baby and Mary are better. We will be home next week."

Next week came and passed, but the Vendons did not come. Other weeks came also and passed on bringing the months that make the years.

The Vendons had started on their homeward journey but they could not be traced. There occurred at this time a very bad wreck of a western bound train where the cars plunged from a bridge into the waters below. The coaches that hung suspended above the water caught fire and burned.

It was supposed the Vendon family were among the number who perished, but Sitka could not be made to believe it was possible. Mr. Vendon had written they were coming, and nothing could move the stolid mind of the Indian girl. So she still guarded the homestead.

Months grew into years and gradually the desert claimed its own again, and the little homestead became part of the waste acres.

Into the valley came a man looking for a location. He followed the unused road from Mecca to the old Vendon claim. That night he camped near the cabin. He told that, as he was sitting by his camp fire planning how he could bring the land into a productive state, he heard the crackling of the brush near by and before him appeared an Indian woman carrying a gun. She did not speak, but her actions left no doubt in the man's mind that he was expected to leave. Not until he spoke and said that when day came he would go away, did the Indian woman offer to leave.

# Seven Trains Daily

## Los Angeles to San Francisco

Coast Line and Valley Line

The Shore Line Limited

(No. 77) leaves Los Angeles at eight o'clock every morning—one hundred miles along the ocean shore.

There is also the OWL and the LARK by night.

Scenery and Service—and Safety First, always.

## Southern Pacific

—See the Apache Trail of Arizona

On the morrow he left not to return, nor has there been any one who has cared to or dared reclaim the homestead.

On a moonlight night the little cabin shows dark against the cottonwood trees. A shaft of moonlight shining in the open doorway brings to view the baby's chair.

Along the paths come the wild things of the desert and hills. A sly coyote quenches his thirst and slinks away to give place to a wildcat. The last wiled bark of the coyote is heard in the distance and the wildcat's call is answered by its mate, before the timid rabbit dares to venture and add its tracks to the trail.

Over all seems to linger the presence of the undaunted spirit of the Indian girl guarding the place.

#### LET'S EAT MORE ORANGES

Written for California Cultivator

MOST of us here in California don't need to be urged to do that. And most of us think, too, that the way to eat them is in the original package fresh from the tree. But sometimes

or cold water until gelatine begins to thicken, then pour into molds or empty shells of oranges. If placed in orange shells, after jelly becomes cold, cover with egg whites beaten stiff with one-half cup sugar.

#### Orange Whip

One ounce gelatine, one pint orange juice, one-half cup water, two-thirds cup sugar. Soak gelatine in the cold water half an hour, then stand over hot water till dissolved. Add sugar, stir until melted and strain into the orange juice. Stand aside till partly jellied, then whip with egg beater till like white of beaten egg. Turn into mold to harden. Serve plain or with custard sauce or with orange cocktail over top.

#### Orange Pie

Make short pie crust. Bake. Sprinkle powdered sugar over bottom, fill with sliced and sugared oranges scatter sugar and grated orange peel over top and serve at once.

#### SOME RECIPES

From the Sperry Cook Book

#### Graham Bread

Two quarts graham flour, 2 cups

**MAY** the NEW YEAR  
bring to you great  
happiness in a wider  
horizon, an eye that sees  
more clearly, a heart that  
beats in tune with other  
hearts, and, withal, a bright  
hearth fire.

we do like a change, so, just for variety, here are a few suggestions for using them in combinations.

#### Orange Cocktail

Dice two oranges, two bananas, can of sliced pineapple. Mix, pouring over the blended mixture the juice of one lemon. No addition of sugar is necessary. Place in sherbet glasses and serve. A candied cherry is a pleasant addition.

#### Orange Omelet

Beat yolks four eggs, add four teaspoons powdered sugar, four tablespoons orange juice, one-half teaspoon salt, grated rind of one-half orange. Beat whites stiff and fold into yolk mixture. Turn into hot buttered omelet pan, cook very slowly until browned underneath, then put in oven to finish. This omelet burns very easily because of sugar in it, so it must be cooked very carefully. Try one for your New Year's breakfast.

#### Orange Surprise

Heat one-half cup orange juice and one-fourth cup sugar over hot water; beat yolks of two eggs, add one-fourth cup sugar, stir into hot mixture and cook until spoon is coated with the custard. Add one tablespoon gelatine softened in one-fourth cup cold water, and strain entire mixture into one and a half cups cream. Stir over ice water

potato water, 1 yeast cake, 1 quart flour, 1 tablespoon salt, 1 small cup molasses or sugar, 1 tablespoon melted lard.

Dissolve yeast cake in lukewarm water. Mix all ingredients into as stiff a dough as can be stirred with a spoon, adding lukewarm water to make it the proper consistency. Let it stand over night. In the morning stir it down with a spoon thoroughly. Have bread tins greased. Fill each one about half full and let rise to the top of the pan. Bake in moderate oven 1 hour for good-sized loaves.

#### Graham Wafers

Half cup butter or nut butter, 1 cup sugar, 1 egg, 1 teaspoon bicarbonate soda, 2 tablespoons milk and flour.

Beat the butter to a cream; add the egg and beat again until light. Gradually beat in the sugar. Dissolve the soda in two tablespoons of water and add it to the sugar mixture. Add the milk and work in sufficient graham flour—about three cups to make a very stiff dough. Knead until the mixture will hold together. Roll into a very thin sheet and cut into two-inch squares. Lift carefully with a cake turner, put into slightly greased pans and bake in moderate oven until thoroughly crisp and lightly browned—about 8 minutes.

#### Germea Pudding

One pint germea (uncooked), 1 ta-

blespoon melted butter, 3 large peaches, sliced thin, 1 tablespoon sugar, spices to taste, either cinnamon or nutmeg.

Butter a baking dish, put in a thin layer of germea, then a layer of peaches. Season with the butter, sugar and spices; then layer of germea, then peaches and season as above; then cover all with a custard made of three eggs, tablespoon sugar and 1½ pints of milk. Bake 1 hour and serve with sauce of cream, sugar and cinnamon.

#### Oatmeal Soup

One pint cold oatmeal, 1 tablespoon butter, 1 tablespoon chopped onion, 1 teaspoon salt, 1 bay leaf, yolk of 1 egg, 1 quart milk, 1 saltspoon pepper.

Put the butter and the onion in a soup kettle. Push the kettle to one side of the fire and let onion cook, without browning until soft; then add the oatmeal, milk, bay leaf, salt and pepper; stir carefully until the ingredients reach boiling point. Strain through a fine sieve, reheat, and pour while hot into the tureen over the beaten yolk of the egg. Cornmeal mush or any cold cooked breakfast cereal may be substituted for the oatmeal.

#### GREEN PEPPER CHEESE SALAD

Select and wash three medium-sized green peppers. Cut around the stem of each with a slender paring knife to remove the seed and white sections. Stuff the inside of the pepper with cottage cheese, pressing it firmly. Chill, and when ready for use, cut the pepper into one-fourth-inch slices and place two or three of these slices in a nest of tender lettuce. Serve with a salad dressing.

When baking lemon pies do not have your oven too hot, as the lemon will curdle and boil over your crust.

**food**

- 1-buy it with thought
- 2-cook it with care
- 3-serve just enough
- 4-save what will keep
- 5-eat what would spoil
- 6-home-grown is best

Instant warmth. Less furnace heat needed—fewer grate and coal-stove fires. Portable. Economical. No smoke or odor.

**HEAT WITH PEARL OIL**

**STANDARD OIL COMPANY (CALIFORNIA)**

## PERFECTION OIL HEATER

### Get the Light and Power You Need

from your own generating plant

The UNI-ELECTRIC lighting system will put electric light in every room in your house, will run your sewing machine, electric iron, vacuum cleaner, churn, washing machine, etc.

It is Economical and Efficient—Always Ready

Operates with a silent gasoline engine of high speed, generator and automatic governor. Uses standard globes and fixtures. Is easy to install. Can be used for one or more houses, barns, sheds, workshop and any place where you need light and power.

## THE DAHLIA

Those who desire to save their own seed should now select the best blooms for that purpose, marking them in some way. A good method is by tying a piece of string or raffia round the stem. It takes quite a time for the seed to mature. When it is ripe the pod turns brown and becomes dry. It should then be gathered and further dried by exposure to the sun in a window or similar place, when a brisk rubbing in the hands will loosen the seeds. Growing anything from seed is rendered much more interesting by keeping track of the parents; an easy thing to do in the case of dahlias, as one pod will produce many seeds.

If you are growing seedlings and intend planting the tubers next year, keep a record. Professionals do this by means of numbers, as to color and habit, so that you may arrange intelligently in the future, getting colors harmoniously neighbored and the tall flowers behind those of medium stature and the dwarfs in front. Keep in mind that you want to work for a dwarf habit of growth, also a bushy one, with blooms that look you in the face. Many beautiful varieties are droopy in habit and must be turned up for admiration. A stiff-necked generation is desired. The dahlia of the future won't need staking. Another quality, that of keeping after being cut, is susceptible of being cultivated. The old, stiff, ball-like flower kept; some of the newer styled ones do also.

Constitution, the ability to stand cutting, is indicated in dahlias as in humans by a strong neck. Some of the most beautiful new paeony-flowered sorts are weak-necked. Bloom is not everything. The dahlia foliage is attractive and can be made much more so. There is no reason why it should not be variegated. For massing effects, foliage and habit of growth are as important as quality of bloom. Possibly a cross might be effected between the garden kinds and the sea dahlia, with startling results. The possibility is most entrancing when we think of the wonderful foliage and drouth-resisting habits of the latter and the admirable cutting quality of its blooms. It opens up a vista of glorified Shasta daisies in all conceivable colors. This marriage conceivable colors.—A. D. Robinson in California Garden.

## HIGH PRODUCING GUERNSEYS

Amongst other large Guernsey producers, the American Guernsey Cattle Club reports Effie of Alfalfa Farms on fourth official test, making a record of 15,111.7 pounds of milk and 746.56 pounds of fat within the past year. The total production of fat for the four years was 2416.43 pounds, an average of 604.11 pounds per year. Another high producer was Lady's Hope of Maple Hill, 15,126.4 pounds of milk and 776.63 pounds of butterfat in one year at the age of 3½ years. Only three cows of the breed have beaten this record. Another high producer is Ada of Sunny Valley, 12,495.3 pounds of milk, 690.15 of butterfat at the age of 4½ years.

## TO INCREASE YIELD OF DAIRY COWS

The yield of a dairy herd can be increased by from one-tenth to one-fourth by feeding silage made of milo, sweet sorghum or Indian corn. That such results can be achieved with cows which previously had only alfalfa hay or alfalfa with grain feed is shown by a four-years' test recently completed at the university farm at Davis, described in bulletin on "Trials with California Forage Crops for Dairy Cows," obtainable free by writing to College of Agriculture, Berkeley.

The succulence and the palatability of silage both aid in increasing yield of milk. Another important character of silage is that it is of starchy composition and relatively low in protein (flesh-forming substances) and therefore ideal to be fed with high-protein alfalfa, the great dairy feed of California.

For California conditions Indian corn seems to be the best silage crop to plant on irrigated land, with sweet sorghum a close second, but for dry farming or where the water supply is limited the grain sorghums, milo and feterita, or Sudan grass may be placed first. Average yields of ten to fifteen tons of green forage have been obtained at the university farm during the past four years on grain land receiving one irrigation, in case of Indian corn, sweet sorghum, milo, feterita and Sudan grass. All these crops, if cut at the time of approach-

ing maturity for Indian corn and when fully matured for the other crops, produced silage of excellent quality and palatability and of special value as a succulent feed for dairy and beef cattle as well as sheep during the late summer or the winter season.

Per unit of dry matter furnished in the rations of silage fed those containing sweet sorghums proved slightly more efficient than the rations containing Indian corn silage, but Indian corn silage proved about ten per cent more efficient than the rations containing Sudan grass silage.

One advantage the California dairyman has in the use of the silo is that under California climate and crop conditions silos may be filled twice a year and their capacity thus doubled.

## WORLD'S WHEAT PROSPECTS

Important figures on the world's wheat crop for 1917 gathered by the United States food administration show that combined production of all countries is about 32,000,000 bushels less than last year and about 400,000,000 bushels less than the pre-war average. This decrease from the pre-war average is more than 10 per cent. France shows the greatest decrease of all countries, her 1917 crop being 54.5 per cent less than her average crop before the war.

The total world crop of wheat is estimated at 3,347,924,000 bushels of which the United States produced 659,797,000 bushels, the greatest amount of any nation. Other principal wheat countries arranged according to size of crop are Russia (in Europe), India, Canada, Argentina, and Australia. Approximately two-thirds of the wheat crops for 1917 was grown in countries open to world commerce.

# Farm for Profit

## and Help U. S. Win the War

Authoritative tests have proved that as high as 50 per cent increase in crop production may be expected from proper use of fertilizer. Do you realize what that increase means? Fertilizer is the basis of crop production, and compared to the prices of the crops they help to produce, fertilizers were never so cheap as they are today.

### MORE CROPS

will be raised in America this year than ever before. Make every acre you own or rent, produce to the limit. Fertilize your land—the increase in yield and price of crops will more than pay all the fertilizer expense—it will enable you to farm with profit. Don't spend your time working worn out land. Make it pay—Fertilize with Hauser's Organic Fertilizer.
